1. Deepening the real options debate: Real options as dynamic optimization

Authors: Arkadiy V. Sakhartov, Joseph T. Mahoney, Jeffrey J. Reuer

DOI: [10.1002/smj.70109](https://doi.org/10.1002/smj.70109)

Published: 2026-07-12

Keywords: dynamic optimization, path dependence, real options, sequential choice, uncertainty

Fields & Theories:

- **Fields:** Strategic Management, Corporate Strategy, Decision Sciences
- **Theories:** Real Options Theory, Dynamic Optimization, Behavioral Theory of the Firm

Abstract:

Research Summary: Is real option theory useful for management research? This topic was hotly debated two decades ago. Real options were said to be inapplicable to management research and to lack conceptual distinctiveness. Whereas responses to the claim about the non-distinctiveness of real options were disparate, the concern about the theory's non-applicability was considered remediable. Such responses left the impression that real options lost the debate, and the use of real options in management research started to stagnate. This paper reviews the opposing positions in the debate, establishes the conceptual distinctiveness of real options, and outlines responses to concerns about the theory's applicability to management research, thereby underscoring the promise of real option theory as a key pillar for research in strategic management. Managerial Summary: Managers often face decisions about whether to invest, wait, expand, switch the use of resources, or exit a market under uncertainty. This paper explains why real options remain a valuable way to think about such decisions despite earlier criticism of Received: 17 May 2025 Revised: 17 June 2026 Accepted: 23 June 2026 DOI: 10.1002/smj.70109 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–48. wileyonlinelibrary.com/journal/smj 1 the approach. It argues that the core strength of real options is not only in valuing investments but also in helping managers make better sequences of decisions over time by considering how today's choices affect tomorrow's opportunities. The paper also shows how real options can accommodate learning, changing information, organizational constraints, and behavioral biases rather than ignoring them. By viewing strategy as a dynamic process of optimizing decisions under uncertainty, managers can better preserve flexibility, allocate resources, and improve long-term value creation in changing environments. **KEYWORDS** dynamic optimization, path dependence, real options, sequential choice, uncertainty 1 |

2. Putting a price on mission: Social responsibility orientation and startup employment

Authors: J. Daniel Kim, Matthew Lee

DOI: [10.1002/smj.70107](https://doi.org/10.1002/smj.70107)

Published: 2026-07-05

Keywords: corporate social responsibility, employee recruitment, entrepreneurship, gender, human capital

Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Human Capital, Corporate Social Responsibility
- **Theories:** Signaling Theory, Compensating Differentials, Social Identity Theory

Abstract:

Research Summary: Social responsibility-oriented (SRO) employers are widely understood to enjoy advan-

tages in recruitment and hiring, yet most evidence comes from temporary or hypothetical employment contexts. We test for such advantages using microdata on a structured recruitment process in which startups hired full-time employees. We find that SRO employers attract greater initial interest, especially among female candidates, and are more likely to have their job offers accepted. Among candidates with multiple offers, we estimate that they are willing to forgo 13%–18.5% of annual salary for SRO employment. However, employees hired by SRO employers exhibit neither greater retention nor higher job satisfaction. These findings validate the appeal of SRO employers in a full-time recruitment setting and document the boundary between substantial pre-hiring advantages and limited post-hiring effects. Managerial Summary: Employers that claim to have a positive social impact are widely believed to enjoy advantages in attracting employees, yet most evidence J. Daniel Kim and Matthew Lee contributed equally and are listed alphabetically. Received: 25 March 2026 Revised: 25 March 2026 Accepted: 15 May 2026 DOI: 10.1002/smj.70107 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–26. wileyonlinelibrary.com/journal/smj 1 comes from temporary or experimental settings. We study whether these advantages hold in consequential, full-time hiring decisions using data from a structured recruitment process in which startups hired recent college graduates. Candidates are significantly more likely to express interest in and accept offers from mission-driven employers and are willing to forgo 13%–18.5% of annual salary to do so. This recruiting advantage is driven largely by female candidates at the initial attraction stage. However, mission-driven employers show no advantage in retaining employees or in employee job satisfaction, suggesting that advantages may be concentrated at the front end of the employment relationship. 3. Ethnic integration and the value of innovation

Authors: Stefano Breschi, Luisa Gagliardi, Thomas Yoon

DOI: [10.1002/smj.70108](https://doi.org/10.1002/smj.70108)

Published: 2026-07-05

Keywords: ethnic diversity, innovation, integration, knowledge complexity

Fields & Theories:

- **Fields:** Strategic Management, Innovation Management, Network Analysis, Diversity and Inclusion
- **Theories:** Network Theory, Knowledge-Based View, Resource-Based View

Abstract:

Research Summary: Organizations have become increasingly ethnically diverse, and this diversity often brings together distinct technological competencies. Understanding how firms can leverage such diversity to produce valuable innovations therefore becomes essential. This study investigates how ethnic integration within inventor collaboration networks, and its interaction with ethnic diversity, influence the economic value of innovation. Using patent and co-inventor data from 890 publicly traded U.S. firms (1990–2015), we construct a network-based index of ethnic integration, defined as the ratio of cross-ethnic to within-ethnic co-invention ties, and link it to stock market reactions surrounding patent grants. We find that ethnic integration significantly enhances patent value, particularly in firms that are both ethnically diverse and engaged in technologically complex innovation. These findings are robust to an instrumental-variables strategy addressing potential endogeneity concerns. By distinguishing between workforce composition and collaborative structure, our study advances the literature on diversity and innovation and underscores the critical role of integration mechanisms in unlocking the full potential of diverse organizations. Received: 25 March 2026 Revised: 25 May 2026 Accepted: 10 June 2026 DOI: 10.1002/smj.70108 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–29. wileyonlinelibrary.com/journal/smj 1 Managerial Summary: Organizations have become increasingly ethnically diverse, and this diversity brings distinct technological competencies; yet many still struggle to translate diversity into measurable innovation outcomes. This study shows that how diverse talent collaborates is just as critical as who is on the team. Analyzing over 20 years of patent data from 890 U.S. public companies, we find that

firms where inventors frequently collaborate across ethnic lines—what we call ethnic integration—generate significantly more valuable innovations. This effect is especially strong in firms tackling complex technologies, where integrating diverse knowledge is crucial. Importantly, diversity without integration offers limited returns. For leaders, the key takeaway is clear: investing in diverse talent is not enough. Organizations must also build collaborative cultures and structures—from inclusive leadership and cross-ethnic mentorship to team design and onboarding practices—that enable integration. In high-tech and R&D-intensive industries, integration is not optional; it is a strategic lever for innovation performance. **KEYWORDS** ethnic diversity, innovation, integration,...

Fields & Theories:

- **Fields:** Organizational Behavior, Sociology of Work, Career Studies
- **Theories:** Sensemaking, Ideal Worker Norm, Social Identity Theory

Abstract:

This study examines how people change their relationship with work through the adoption and enactment of a new work ideal: a novel aspiration for what constitutes an optimal work life. Drawing on two years of ethnographic observation of the Financial Independence Retire Early (FIRE) community, two rounds of interviews with 55 informants, and analysis of archival materials, I identify four community tactics that informants used to promote a new “work optional” ideal rooted in financial freedom. I then show how the transformational capacity of this ideal hinged on individual perceptions of its appeal and attainability, which evolved via an interplay of group influence and individual sensemaking. Enactment of the new work ideal ranged from radical recalibration to marginal modification of working life. This study explains not only how people are persuaded to adopt a new ideal for work but also why that ideal varies in its transformative impact. I discuss the implications for research on the ideal worker norm, the meaning of work, and ideological conversion.

Fields & Theories:

- **Fields:** Entrepreneurship, Social Entrepreneurship, International Business, Development Studies
- **Theories:** Critical Realism, Relational Theory, Process Theory, Reflexive Agency

Abstract:

The literature on social intermediaries (SIs) highlights their role in alleviating poverty and promoting market inclusion in emerging economies through interventions that counterbalance pressures from formal and informal institutions. However, this research centers on interplays between intermediaries and institutions, implicitly assuming that beneficiaries (BENs) reject their condition of poverty and retain a minimally functioning capacity for reflexive agency, supporting engagement with such interventions. In contrast, our study of slums and rural communities in Kenya and Sierra Leone examines social intermediation amid conditions in which extreme marginalization has fractured BENs' reflexive capacity, leaving them unable to orient toward purposive action. Using a critical realist relational lens, we develop a process model in which social intermediation unfolds through interdependent morpho-regenerative processes—institutional shielding, relational accompaniment, and entrepreneurial empowerment—that create prolonged protective spaces against oppressive pressures and repair reflexivity gradually until BENs can sustain it on their own. We theorize morpho-regeneration as a custodial practice of “with-in” intervention that restores individual capacities for social and economic participation, enabling more conventional outside-in and inside-up intermediation approaches. Our study offers new insights into the relational dimensions of poverty alleviation and their connection to community-level dynamics, with relevance to other contexts where agency is severely destabilized.

2. When Does Appointing a Female Director Influence CEO Pay Raises? Investigating the Conditions that Unleash Her Minority Influence in the Boardroom

Authors: Su Chen, Jie (Jasmine) Feng, María Del Carmen Triana

DOI: [10.5465/amj.2023.0843](https://doi.org/10.5465/amj.2023.0843)

Published: 2026-07-07

Fields & Theories:

- **Fields:** Corporate Governance, Strategic Management, Diversity and Inclusion
- **Theories:** Minority Influence Theory, Social Influence Theory, Agency Theory

Abstract:

Given women's distinct values, perspectives, and decision-making approaches, the inclusion of female directors has been proposed as a potential mechanism for curbing excessive CEO pay raises. Yet, empirical evidence remains mixed, indicating that the mere presence of a female director does not reliably translate into meaningful influence. Drawing on minority influence theory as our core framework, supplemented by decades of gender research, we examine the incremental influence of appointing a female director on CEO pay raises to identify conditions under which her minority influence is strengthened or weakened. Using 5,395 firm-year observations from 791 Standard & Poor's (S&P) 1500 firms between 2010 and 2017, we find that appointing a new female director is associated with smaller CEO pay raises when boards have higher levels of incumbent female representation (vs. token representation), a female CEO, fewer male-held interlocking directorships, and more frequent membership changes among male directors. We replicate our

analyses using an alternative dataset, alternative measures, and more nuanced decompositions of CEO pay raises (e.g., warranted vs. unwarranted raises) and find consistent results. This research augments the dialogue on gender diversity in board governance and provides evidence on when incremental changes in board composition can help address persistent concerns about excessive CEO compensation.

3. Navigating the Talent Development Paradox: How Training Breadth and Depth Shape Lateral Mobility Outcomes within Organizations

Authors: Shuye Lu, Huaikang Zhou, Qiuping Peng, Ning Li

DOI: [10.5465/amj.2023.1327](https://doi.org/10.5465/amj.2023.1327)

Published: 2026-07-07

Fields & Theories:

- **Fields:** Strategic Human Resource Management, Organizational Behavior, Talent Management
- **Theories:** Human Capital Theory, Matching Theory, Resource-Based View

Abstract:

Faced with evolving skill demands and retention pressures, organizations are increasingly relying on lateral mobility to redeploy internal talent and maintain agility. Yet, they confront a persistent talent development paradox: how to cultivate deep specialization that supports current-role performance while fostering adaptability for cross-role transitions in dynamic internal talent markets. Drawing on human capital theory and matching perspectives, this study examines how the structure of training investments, characterized by breadth and depth, differentially shapes mobility outcomes across varying internal market conditions. Using seven years of personnel data from a large internet company's lateral mobility program, we find that a broader training portfolio prior to transfer application is associated with a higher likelihood of transfer, while a deeper, more specialized portfolio predicts a lower likelihood of transfer. Breadth also predicts higher turnover following repeated rejections, but greater retention when rejection rates are low. Notably, post-transfer performance is moderated by job distance: breadth is positively associated with performance in high-distance moves, while depth is negatively associated with performance only when job distance is high. These findings shed light on how organizations navigate the specialization–adaptability trade-off through calibrations of training breadth and depth, offering new insights for talent management and employee career development.

4. From Culprit to Cure: How Incumbents Use Prognostic Framing to Turn Societal Problem Sources into Solutions

Authors: Hannah Schupfer, Birthe Soppe

DOI: [10.5465/amj.2024.1030](https://doi.org/10.5465/amj.2024.1030)

Published: 2026-07-07

Fields & Theories:

- **Fields:** Strategic Management, Non-market Strategy, Sustainability, Organizational Theory
- **Theories:** Framing Theory, Legitimacy Theory, Institutional Theory

Abstract:

Despite consensus on the urgency of addressing grand challenges, agreement on appropriate solutions remains elusive. Industry incumbents are increasingly influential in shaping solutions to these problems, yet their contentious involvement complicates their prognostic framing of such solutions. As moral legitimacy demands intensify, incumbents are pressured to advance transformative solutions while simultaneously meeting pragmatic legitimacy demands tied to the profitability of conventional businesses. How incumbents

deploy prognostic framing under moral–pragmatic legitimacy tensions remains underexplored. We address this question through an inductive, longitudinal case study of a Norwegian oil major’s articulation of climate solutions. Our analysis reveals four prognostic framing mechanisms: bundling core business with cleaner alternatives, moralizing core business, assimilating incremental alternatives with core business, and contrasting radical alternatives with core business. Through these mechanisms, incumbents recast their contested core business as solution to a societal problem, thereby navigating moral–pragmatic legitimacy tensions while constraining the perceived problem–solution fit of radical alternatives. Deriving a grounded model of problem-source-to-solution reversal, our study advances research on framing and grand challenges by illustrating how prognostic framing can be deployed to shape problem–solution correspondence and constrain more transformative solutions to societal problems.

- **Theories:** Life Course Perspective, Temporal Embeddedness, Event System Theory

Abstract:

Firms evolve within the temporal context of entrepreneurs’ lives, over the course of which entrepreneurs experience various life events. To advance our understanding of the temporal dynamics that entrepreneurs’ life events trigger at the entrepreneur and firm levels, and how entrepreneurs can navigate these dynamics, this study applies a life course perspective to introduce a theory of firms’ temporal embeddedness in entrepreneurs’ lives. This theory outlines the reciprocal temporal coupling between entrepreneurs’ life events and firm-level dynamics, thereby offering novel insights into the managerial challenges entrepreneurs face in navigating life events. In particular, this study introduces theorizing on the direction, magnitude, valence, and temporal pattern of the impact of life events on both firm goals and firm performance. It explicates the temporal prediction problem and cost–benefit trade-offs entrepreneurs face when navigating life events, and it introduces theoretical insights into the effectiveness and efficiency of different dynamic navigation strategies for managing the impact of various classes of life events. By advancing a life embeddedness theory that temporally embeds firms into entrepreneurs’ event-filled lives, this study contributes to research at the intersection of entrepreneurs’ private lives and businesses, and to event-based perspectives on

Authors: Africa Ariño, Pascual Berrone, Joan E. Ricart, Xavier Sobrepere, Alexis Yong

DOI: [10.5465/amr.2024.0051](https://doi.org/10.5465/amr.2024.0051)

Published: 2026-07-07

Fields & Theories:

- **Fields:** Strategic Management, Corporate Governance, Public–Private Partnerships, Stakeholder Management
- **Theories:** Stakeholder Theory, Governance Theory, Hybrid Collaboration, Transaction Cost Economics

Abstract:

We advance stakeholder governance theory by theorizing how public–private partnerships (PPPs) can govern relationships with both contributing stakeholders (public and private partners) and legitimate but non-contributing stakeholders in order to create and more equitably distribute value. By integrating insights from stakeholder theory and PPP governance research, we develop a framework that distinguishes three categories of formal-relational mechanisms (i.e., participation and representation, joint integration, and monitoring and transparency). We theorize how these mechanisms mitigate three governance risks common in PPPs—cooperation failure, coordination failure, and opportunistic co-optation—that stem from goal misalignment, deficits in experience-based PPP capabilities, and power imbalances. We further argue that when risks co-occur, governance mechanisms can interact paradoxically. As a result, effective governance often requires portfolios of complementary mechanisms rather than single solutions. Our theory offers a meso-level account of how hybrid collaborations can sustain joint value creation while shaping more equitable value distribution, and contributes to both stakeholder theory and PPP governance research.

1. Beyond the Individual: Neurodiversity and the Multi-Level Ecology of Entrepreneurial Ecosystems

Authors: Reginald Tucker

DOI: [10.1177/10422587261462857](https://doi.org/10.1177/10422587261462857)

Published: 2026-07-07

Fields & Theories:

- **Fields:** Entrepreneurship, Innovation Ecosystems, Diversity and Inclusion
- **Theories:** Ecological Systems Theory, Interactionist Framework, Co-evolutionary Theory

Abstract:

A tension exists between the potential entrepreneurial strengths associated with neurodiversity and the systemic barriers neurodiverse individuals face within entrepreneurial ecosystems. Applying Ecological Systems Theory, we analyze how neurodiverse entrepreneurs interact with the nested layers (Micro- to Chrono-system) of the entrepreneurial ecosystem. This multi-level perspective reveals how inter-system (mis)alignments create friction, necessitates theorizing neurodiverse ecological niches, and positions neurodiversity as influencing ecosystem co-evolution. We offer a dynamic, interactionist framework that resolves theoretical limitations and provides a foundation for building more inclusive and effective entrepreneurial environments supportive of cognitive diversity.

Published: 2026-06-30

Fields & Theories:

- **Fields:** Entrepreneurship, Entrepreneurial Financing, Angel Investing
- **Theories:** Escalation of Commitment Theory, Conflict Management Styles Perspective, Social Embeddedness

Abstract:

Angel investment research has grown rapidly; yet, when and under what conditions angel investors recommit remains understudied. Integrating escalation of commitment (EOC) theory with the conflict management styles (CMSs) perspective, we examine these conditions through archival data investigation, a conjoint experiment (2,368 decisions by 148 angel investors), and a field study (214 ventures by 112 angel investors). We show that prior commitment increases angel investors' reinvestment likelihood, contingent on entrepreneurs' CMSs. We advance EOC theory by identifying relational boundary conditions and conflict management research by theorizing its moderating role in reinvestment decision-making, revealing escalation as a socially embedded process shaped by investor–entrepreneur interactions.

Fields & Theories:

- **Fields:** Entrepreneurship, Entrepreneurial Financing, Sustainable Entrepreneurship, Equity Crowdfunding
- **Theories:** Resource-Based View, Signaling Theory, Labor Market Economics

Abstract:

We investigate how environmentally oriented ventures (EOVs) acquire financial resources through equity crowdfunding (ECF) and allocate resources to job creation. Our results suggest that EOVs raise 22.20% to 34.70% more funding and increase headcount by 18.06% to 61.95% relative to non-environmentally oriented ventures. We argue that environmental orientation may increase demand for labor, through the ongoing development of environmental capabilities, and labor supply, by making EOVs more attractive employers. Our

evidence is more consistent with a supply explanation as EOVs find it somewhat easier to hire in tight labor markets. Our study highlights how ECF has real-economic impact through job creation. JEL classification: L26, M13, M14, M51

Abstract:

Research Summary: Despite growing interest in how linguistic strategies shape audience responses to innovative ideas, prior evidence on the benefits of using emotional language remains mixed. Building on research on emotional ambivalence and social evaluation, we introduce the concept of emotionally ambivalent framing (i.e., the combination of positive and negative emotional language when presenting ideas) and investigate its effects on audience evaluation. Analyzing data from 3284 TED Talks, we find that emotionally ambivalent framing increases receptivity, but only for typical ideas. For atypical ideas, instead, such framing tends to undermine the audience's appreciation. However, we show that speakers' fame mitigates this effect, enabling emotionally ambivalent framing to serve as an effective communicative strategy for atypical ideas as well. These findings advance our understanding of the interplay between emotions and cognition in shaping the effectiveness of linguistic framing, contributing to research on entrepreneurship, ambivalence, and social evaluation. Managerial Summary: It is still unclear whether and when using emotional language to frame ideas helps innovators. Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–31. wileyonlinelibrary.com/journal/sej 1 and entrepreneurs overcome audience resistance. In this study, we find that combining both positive and negative emotional language when presenting an idea (a strategy we call emotionally ambivalent framing) improves audience receptivity to typical ideas. However, an emotionally ambivalent framing loses its effectiveness for atypical ideas. We also find that this effect depends on how well-known entrepreneurs are: for famous ones, emotionally ambivalent framing becomes a powerful tool for increasing audience receptivity, particularly for atypical ideas. Overall, we show how innovators and entrepreneurs can strategically leverage emotional language and craft effective framing strategies that shape how audiences evaluate their ideas. - **Theories:** Ritual Theory, Meaning-making, Social Constructionism

Abstract:

Abstract Being confronted with seemingly intractable problems such as refugee crises, climate change, or poverty is daunting and can risk a sense of meaninglessness for organizational actors working on these issues. We focus on the pervasive use of representations, including assessments and evaluations, to deal with intractable problems, even though such representations are commonly understood as incomplete or flawed. Drawing on ritual theory, we approach representations as powerful in creating meaning and sustaining action, irrespective of a direct link to the problem. Our ethnographic study focuses on a humanitarian organization and their work in refugee crises. We unpack how ritualized representations, specifically the ritualistic use of needs assessments, generate meaning beyond their narrowly intended functionality. Through their shared rhythm, emotional intensity, and ceremonial display, ritualized representations sustain engagement against all odds in the face of otherwise intractable problems. We contribute to debates on sustaining engagement with complex social problems through ritualization and develop a more nuanced understanding of the double-edged nature of ritualized practices.

Fields & Theories:

- **Fields:** Strategic Management, International Business, Corporate Social Responsibility, Environmental Governance
- **Theories:** Institutional Theory, Varieties of Capitalism, Comparative Institutional Analysis

Abstract:

Abstract In this paper, we adopt the so-called ‘related’ perspective on business and government relations and propose that they interact and influence one another in governing corporate responsibility. We theorize that private and public governance may operate as complements or substitutes, and conduct a comparative institutional analysis to identify the institutional systems under which each form of interaction prevails. To illustrate our conceptual framework, we use the global diffusion of ISO 14001 as an indicator of the growing privatization of environmental governance and environmental stringency as a reflection of the strength and effectiveness of public environmental governance. Then, we empirically examine how ISO 14001 and environmental stringency interact to reduce corporate emissions across varieties of institutional systems. Contrary to the dominant view that public and private governance are substitutes, we propose that they can complement one another, depending on the institutional setting. Our results show that complementarity is more likely when the institutional systems follow a market-based logic, such as in the liberal market economies, and when firms expand internationally. This finding holds after using alternative methodological approaches

and more granular classifications of institutional systems. We discuss implications for governance research in management studies and practical implications for tackling grand environmental challenges.

Abstract:

Abstract This Point introduces algorithmic status inequality that is, enduring disparities in social position, influence, and resource access reinforced by AI systems, as a critical lens for understanding technological stratification in organizations. I develop an integrative model showing how computational beliefs (i.e., cultural assumptions embedded in algorithmic design) interact with computational inequalities (i.e., disparities in technical capabilities) to produce persistent status hierarchies through self-reinforcing feedback loops. Illustrative cases in recruitment, healthcare and legal assistance demonstrate these mechanisms in practice, producing three consequential patterns: status schisms within minority-serving AI systems, status tensions between dominant and specialized algorithms and status disparities between AI systems and human experts. Unlike the Counterpoint perspectives that either emphasize market-based dynamic capabilities as self-correcting mechanisms for algorithmic disparities or locate the primary source of inequality in biased training data amenable to technical debiasing, I argue that neither purely technical approaches (such as diversifying training data) nor purely market-based approaches (such as relying on competitive dynamics) are sufficient to address algorithmic status inequality. This sociotechnical perspective explains why isolated interventions typically fail and provides a theoretical foundation for developing comprehensive strategies that simultaneously target embedded cultural beliefs and material inequalities in AI development.

Fields & Theories:

- **Fields:** Strategic Management, Innovation Ecosystems, Strategic Leadership
- **Theories:** Ecosystem Theory, Resource Partitioning, Strategic Leadership Theory, Middle Management Perspective

Abstract:

Abstract Ecosystem diversification extends joint value creation by developing new interdependencies be-

tween ecosystem actors while redeploying partners and their resources. Such diversification simultaneously generates tensions over ecosystem resources not controlled by the focal firm. This study examines how strategic leaders across organizational levels navigate these resource tensions. Based on a longitudinal case study of PetCo's diversification within the pet care ecosystem, we identify two types of ecosystem resource tensions –commensalistic and rivalrous –and show how each activates distinct patterns of leadership actions and outcomes. Commensalistic tensions prompt middle managers to lead peer-level interactions that secure permissive partitioning of overlapping resources, granting multiple initiatives access to ecosystem resources. Rivalrous tensions, by contrast, require coordination across hierarchical levels, with senior managers intervening to enforce restrictive resource partitioning that limits or withdraws an initiative's access to resources, or, when senior and middle managers collaborate, to achieve permissive partitioning that sustains synergy across initiatives. We discuss implications for research on strategic ecosystem leadership and diversification.

Fields & Theories:

- **Fields:** Non-market Strategy, Corporate Social Responsibility, International Business, Institutional Theory
- **Theories:** Regulatory Intermediation, Institutional Theory, Stakeholder Theory

Abstract:

Abstract Whereas extant studies have mostly treated multi-stakeholder initiatives (MSIs) as instruments of private authority that interact with public governance in various spheres, this study offers an alternative view of MSIs as important regulatory intermediaries, specifically in times of regulatory flux. Building on an in-depth case study of the German Partnership for Sustainable Textiles in the context of the emerging German Supply Chain Act, we explore how MSIs can support firms in navigating the transition from voluntary governance to mandatory due diligence legislation. Our analysis reveals the evolving and multi-faceted intermediary roles that MSIs can enact, documenting the fine-grained practices whereby MSIs can support firms in managing the challenges related to changing regulatory landscapes. We also highlight several role-based tensions fuelled in this context and indicate how MSIs can manage those. Our findings contribute to theory on regulatory intermediation by illuminating a dynamic process shaped by the interplay between regulatory events, firm challenges, role-based tensions, and role adaptation. Extrapolating from our case, we theorize MSIs as actors that can effectively mediate business–government interactions and help build constructive institutional relationships in emerging regulatory fields.

- **Theories:** State Capitalism, Agency Theory, Institutional Theory, Resource-Based View

Abstract:

Abstract The extent to which governments should intervene in state-owned enterprises (SOEs), and the consequences of such intervention for firm performance, remain subjects of ongoing scholarly debate. Building on competing perspectives that view the state as either a strategist or a liability, we argue that the effects of state intervention depend on the government's political ideology and the dimension of performance considered. We test this argument using a quasi-experimental difference-in-differences design and panel data from Polish SOEs. On average, the shift from a liberal to an interventionist regime was associated with significant gains in scale-related performance, although not with improvements in profitability. Our panel regression results further show that these effects varied with the depth of state involvement in individual SOEs. State ownership and state-appointed board members were positively associated with scale-related performance following the regime shift, while the latter were also marginally negatively associated with profit-based performance. Taken together, these findings suggest that the state may simultaneously function as a strategic driver of expansion and a liability for profitability, depending on the prevailing political ideology.

Fields & Theories:

- **Fields:** Strategic Management, Innovation Ecosystems, Economic Geography
- **Theories:** Agglomeration Theory, Embeddedness Theory, Community Assembly Metaphor, Knowledge Spillover

Abstract:

Abstract Drawing on agglomeration theory, embeddedness theory, and the community assembly metaphor, this study examines how regional industrial ecosystems (RIEs) shape firm performance in China's manufacturing sector. Using longitudinal data on 1012 listed manufacturing firms across China between 2008 and 2019, we combine input–output analysis with geographic distance measures across low-, medium-, and high-tech manufacturing industries to assess the effects of specialized (intra-industry) and diversified (inter-industry) agglomeration externalities on firm performance and technological innovation. We find that intra-industry externalities are negatively associated with firm performance in RIEs, particularly through lower innovation and profitability, whereas inter-industry externalities improve innovation, productivity, and market advantage. We argue that, in ecosystems shaped by market coordination and government industrial policy, specialized agglomerations do not necessarily enhance firm performance and may instead generate lock-in, knowledge redundancy, and resource congestion, especially in low-tech manufacturing. Our findings suggest that policymakers and firm managers should place greater emphasis on inter-industry collaboration than on intra-industry concentration in order to reduce resource competition and strengthen innovation within RIEs. These implications are particularly relevant for low- and medium-tech firms, where resources are more constrained.

- **Theories:** Institutional Theory, Agency Theory, Coalition-based View, Political Economy

Abstract:

Abstract We theorize how state ownership reweights organizational objectives when political and market conditions shift. Using a mixed-method, history-to-theory design, we examine 160 state-owned and 132 private Brazilian firms from 1973 to 1993. We argue that two mechanisms –appointment politicization and constituency-protection salience –alter managerial discretion and the political costs of visible job losses. Panel tests show that CEO turnover is higher in SOEs than in private firms and that this ownership gap widens under democracy. By contrast, SOEs are not uniformly job-protective: they exhibit selectively lower probabilities of large layoffs under democratic regimes and recessions, while downturns do not materially change the SOE–private firm difference in CEO turnover. Archival evidence and elite interviews trace these patterns to shifting coalitions that politicize appointments and heighten employment-protection salience, channelling adjustment towards leadership replacement or employment buffering. We synthesize that these findings in a framework that maps SOE responses in a continuous space defined by pressures to curtail managerial discretion and to protect constituencies, offering a portable lens for comparing state capitalism across contexts. The study replaces fixed-mandate views of SOEs with a contingent, coalition-based account of how state ownership shapes adaptive objectives over time.

- **Theories:** Multimarket Contact Theory, Collective Action Theory, Tacit Collusion, Regulatory Threat Perspective

Abstract:

Abstract Firms under regulatory threat often have a collective interest in influencing policy outcomes through market behaviour. However, when coordination is prohibited and collective benefits are non-excludable, such efforts are constrained by coordination and outcome uncertainty. While prior research emphasizes firm influence through the public policy arena, much less is known about how firms navigate collective action problems in the market arena, where interdependent incentives and uncertainty about rivals' behaviour make coordination difficult under legal constraints. We address this gap by theorizing that multimarket contact (MMC) creates the conditions under which coordination and sanctioning mechanisms become feasible. Using data from the Indian pharmaceutical industry's response to a 2013 price-control regulation, we show that firms with higher MMC are more likely to raise prices in regulated markets, thereby participating in collective

efforts to shape the average market price used to set price ceilings. Our findings extend the MMC framework by showing how firms can activate it selectively for cooperative purposes under regulatory pressure, even when assumptions like competitive parity are violated. More broadly, we identify MMC as a contingency that enables firms to overcome collective action barriers in the market arena, offering new insights into the interplay between market and non-market strategy.

Fields & Theories:

- **Fields:** Organizational Behavior, Human Resource Management, Organizational Socialization
- **Theories:** Feedback Seeking Behavior Theory, Proactive Socialization, Information Seeking Mechanisms

Abstract:

In this study, we examine the relationships between perceived experience and newcomer adjustment outcomes. Drawing from Feedback Seeking Behavior theory, we challenge the assumption that greater perceived experience is universally beneficial during organizational entry. We propose that greater perceived experience could impair adjustment outcomes (i.e., job performance, work stress, and social disconnectedness) through two mechanisms: increased selfreliance beliefs and perceived risk of information seeking. In a field study of 243 new hires, we found evidence consistent with several of our predictions. Additionally, we found that openness to experience significantly weakened the relationships between perceived experience and selfreliance beliefs and risk of information seeking, as well as to subsequent adjustment outcomes (i.e., moderated mediation). Our research highlights the potential liabilities of starting a new job with greater perceived experience, turning attention to the factors that might inhibit proactive socialization efforts, while also examining openness as a key moderator of these effects. Fields & Theories:

- **Fields:** Organizational Behavior, Leadership, Innovation Management
- **Theories:** Ethical Leadership Theory, Psychological Safety, Uncertainty Management Theory, Certainty Perspective

Abstract:

Organizations must simultaneously ensure “appropriateness” through adherence to rules and norms while promoting novelty through risk-taking. Ethical leadership, characterized by an emphasis on normatively appropriate conduct and the encouragement of ethical behavior through communication, reinforcement, and

decision-making, is increasingly viewed as a way to navigate this tension and enhance creativity—the generation of novel and useful ideas. We modify this positive view by investigating two distinct but not mutually exclusive mechanisms underlying the effects of ethical leadership from a certainty perspective. Specifically, we propose that ethical leadership provides employees with relational certainty, which fosters psychological safety and thereby boosts creativity, and with normative certainty, which promotes conformity and hence constrains creativity. We also identify intolerance of uncertainty as a boundary condition for these countervailing explanations. Across three complementary studies, including a meta-analysis (Study 1) and two field studies with multi-source and multi-wave data (Study 2 and Study 3), the results largely supported our hypotheses. Our research contributes to the literature by introducing a certainty perspective that clarifies both the positive and negative relationships between ethical leadership and employee creativity, as well as by identifying a key boundary condition.

Fields & Theories:

- **Fields:** Entrepreneurship, Organizational Theory, Social Movements, Small Business Management
- **Theories:** Framing Theory, Social Movement Theory, Institutional Theory

Abstract:

Drawing on framing theory, we theorize how social movements affect social movement-driven small businesses over a movement's lifecycle. We propose three social movement-driven small business types—originals, casual converts, and zealot converts—and argue that social movements' diagnostic, prognostic, and motivational frames will affect these businesses differently during different stages of the social movement's life cycle. Specifically, we explore the degree to which they integrate the social movement's values into their businesses during different movement stages, their financial outcomes, the extent to which they contribute to the social movement, and whether they maintain or abandon their value integration post-movement. Our theory highlights the ripple effects that social movements can have on firms that are not the movement's direct targets and enhances our understanding of the relationship between social movements and small businesses in markets unrelated to the social movement.

Fields & Theories:

- **Fields:** Entrepreneurship, Entrepreneurial Decision-making, Organizational Behavior
- **Theories:** Affect-as-information perspective, Information Search Theory

Abstract:

We investigate the effects of entrepreneurial subjective ambivalence on a form of adaptive action: venture idea revision. Building on the affect-as-information perspective, we propose that entrepreneurial subjective ambivalence will increase venture idea revision by increasing information search behaviors. The results of a longitudinal, repeated-measures field study based on 175 entrepreneurs in a top incubator program demon-

strate that when entrepreneurs experience higher subjective ambivalence (compared to lower ambivalence) in response to mentor feedback about their new ventures, they engage in higher levels of venture idea revision. We theorize and find that this increase in venture idea revision arises because subjective ambivalence is positively associated with more intense and broader information search behaviors. We discuss implications of our findings for research on affect in entrepreneurial decision-making, creative revision, and ambivalence in organizations, as well as for formal entrepreneurial mentoring programs.

Fields & Theories:

- **Fields:** Organizational Behavior, Human Resource Management, Technology Management
- **Theories:** Human Agency Theory, Job Insecurity Theory, Managerial Authority

Abstract:

Across contemporary workplaces, organizations are increasingly deploying biometric technologies that capture, analyze, and act upon workers' physiological and behavioral data, including heart rate variability, movement patterns, and keystroke dynamics. These technologies do not merely monitor workers; they introduce a qualitatively distinct form of managerial authority that is shaping perceptions of employees' future organizational standing. We term this phenomenon bodily data control, defined as the organizational expectation that workers' bodily data constitutes a legitimate input into evaluation, coordination, and intervention. We contend that bodily data control threatens a worker's ability to think, plan, and act, which elicits job insecurity. Job insecurity refers to the perceived threat to the stability and continuity of one's employment. We propose a theoretical model in which bodily data control threatens three dimensions of human agency: interpretive agency, moral agency, and instrumental agency. We theorize that these agency threats manifest experientially as perceived creepiness, affronts to inherent and meritocratic dignity, and reduced job autonomy, respectively, each of which elicits job insecurity through a distinct causal pathway. Our theoretical model and propositions contribute to job insecurity scholarship by reframing technology-induced job insecurity as a function of managerial authority. Acknowledgments: The authors would like to thank Dr. Nicky Dries and the two anonymous reviewers for their constructive feedback throughout the review process. Fields & Theories:

- **Fields:** Organizational Behavior, Organizational Change
- **Theories:** Appraisal Theory, Temporal Dynamics, Affective Events Theory

Abstract:

Employees' self-initiated and active behaviors to improve organizational change design and implementation (i.e., proactive support) are a critical determinant of effective organizational change. Despite organizational change being an inherently dynamic phenomenon, research has largely adopted a static view with little at-

tention to the temporal development of employee responses to change. We build on appraisal theory to examine how shifts (increases vs. decreases) and stability (consistently high vs. low) in employees' appraisals of work-related benefits of change are associated with proactive support over time. Using cross-level polynomial regression with two-wave survey data (Study 1; $n = 267$) from a technology firm undergoing change, we find the highest levels of proactive support when employees experience an increase in work-related benefit appraisals between Time 1 and Time 2, compared to all other patterns including a stable pattern of high benefits over time. Results further show that even a decrease in benefit appraisals, compared to consistently low benefit appraisals, predicts higher levels of proactive support for change. The relationships between shifts in benefit appraisals and proactive support are largely replicated in Study 2, an experiment ($n = 523$). This study also illustrates that positive emotions help to explain why the experience of shifting appraisals matters for employee proactive support for change. Our research highlights the role of temporal shifts in appraisals and provides important implications for organizational change-related theory, research, and practice.

Abstract:

The uniformed personnel who deploy around the world provide a key service to their country and often do so by putting themselves in dangerous situations to defend peace and security for others. After serving, military veterans face a challenging transition into civilian life and work places. In this review, we describe the importance of understanding the extreme context of veterans' transitions and then integrate multidisciplinary research on veterans to identify the conditions under which the transition is successful (or not). Specifically, our review identifies how and under what conditions the knowledge, skills, and abilities of veterans translate to the civilian workforce, the employment outcomes (successes or failures) seen during the transition to the civilian workforce, and how employment opportunities increase the wellness of veterans. Throughout the review, we illustrate how incorporating the experiences of veterans can advance management theory on social identity, stigma, unemployment, intersectionality, and careers. In Acknowledgments: The authors would like to acknowledge the service members around the world who did not have the chance to return home and transition to civilian employment. We are very appreciative of Patrick McKay and our two anonymous reviewers for their insightful comments during the review process that significantly strengthened the paper. We are also grateful to David Hill for his contributions to earlier versions of the manuscript. The initial review was shaped by many conversations with veterans, current service members, leaders of veteran service organizations, and providers from the U.S. Department of Veterans Affairs. Supplemental material for this article is available with the manuscript on the JOM website. Corresponding author: John P. - **Theories:** Institutional Theory, Agency Theory, Socio-relational Perspective

Abstract:

Persistent and multifaceted gender differences in entrepreneurship, alongside the heterogeneous landscape of women's entrepreneurial activity worldwide, have attracted increasing scholarly attention. As this body of research has expanded substantially, a comprehensive synthesis is both timely and necessary. To address this need, we adopt an integrative review approach, analyzing 458 studies published in journals ranked 3 to 4* in the 2024 ABS Academic Journal Guide between 1998 and 2025. Drawing on a three-level contextual model, we situate women's entrepreneurship within institutional (macro), socio-relational (meso), and individual (micro) contexts. We distill four overarching theoretical themes that structure current scholarship: (1) normative and cognitive mechanisms underlying gendered outcomes; (2) tangible structures shaping gendered entrepreneurship; (3) social-relational contexts bridging macro- to micro-level contexts; and (4) women entrepreneurs as agents of contextual change. Within each theme, we synthesize key mechanisms, compare theoretical perspectives, and identify avenues for future research. Our review makes three contributions: first, we advance women's entrepreneurship research with a framework that captures the multiplicity and interaction of overlapping institutional, socio-relational, and individual contexts in which women's entrepreneurship is embedded; second, we highlight the multi-level nature of contexts, particularly the mediating role of meso-level socio-relational dynamics between macro-level institutions and micro-level outcomes; third, we position women entrepreneurs as active agents who collectively reshape the meso- and macro-level contexts.
