### 1. Entrepreneurship training and entrepreneurs' perceptions of ability: A randomized control trial in Tanzania

**Authors:** Francesca Bacco, Andrea Coali, Audra Wormald

**DOI:** [10.1002/smj.70117](https://doi.org/10.1002/smj.70117)

**Published:** 2026-08-04

**Keywords:** developing country context, entrepreneurship, experimentation, perception of ability, scientific approach

#### Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Management, Entrepreneurial Training, Strategic Decision-Making
- **Theories:** Social Cognitive Psychology, Scientific Approach to Entrepreneurship, Entrepreneurial Experimentation

#### Abstract:

Research Summary: This study examines whether training entrepreneurs to apply systematic approaches to strategic decision-making influences their self-perception of ability. Using a field experiment in which 151 entrepreneurs in Tanzania were randomly assigned to two different versions of entrepreneurial training (an evidence-based vs. a theory-and-evidence-based approach), we find entrepreneurs in the theory-and-evidence-based condition experience a larger and more persistent increase in their self-perception of ability to deal with challenges compared to the evidence-based condition. Additionally, entrepreneurs across the two conditions respond differently to the training depending on their initial levels of perceived ability. By integrating insights from social cognitive psychology, this study contributes to research on entrepreneurial experimentation by uncovering the effect of strategic decision-making training on individuals themselves, not just their ventures' outcomes. All authors contributed equally, and the names are listed in alphabetical order. Managerial Summary: Entrepreneurs' self-perceptions of ability are critical for how they engage with learning opportunities and respond to challenges that arise as they develop their businesses. To explore how different versions of training on strategic decision-making impact entrepreneurs' self-perceived abilities to deal with such challenges, we conducted a field experiment with Tanzanian agribusiness entrepreneurs. Results show that entrepreneurs who learn to develop a theory-of-value before engaging in experimentation experience a larger increase in self-perceived ability compared to those who experiment without such a theory-of-value, and this effect persists for longer. Our results have practical value for entrepreneurs and support organizations offering training programs and point to self-perception of ability as an important factor to help entrepreneurs follow the behavioral advice they receive during those trainings.

### 2. ESG investing and pollution outsourcing

**Authors:** Shipeng Yan, Fan Zhang, Zhengyu Li

**DOI:** [10.1002/smj.70115](https://doi.org/10.1002/smj.70115)

**Published:** 2026-08-03

**Keywords:** environmental performance, ESG, principles for responsible investment, socially responsible investors, supply chain

#### Fields & Theories:

- **Fields:** Strategic Management, Corporate Governance, Sustainability, Supply Chain Management

- **Theories:** Institutional Theory, Corporate Decoupling, Resource-Based View

## Abstract:

Research Summary: Can environmental, social, and governance (ESG) investors hold businesses accountable for their environmental impact? Extending institutional theory and analyzing a global sample of firms from 2006 to 2019, we argue that, in response to ESG investors' institutional pressures, firms may intensify pollution outsourcing to suppliers as a sophisticated form of corporate decoupling. We further theorize and find suggestive evidence that this effect is less salient and sometimes reversed when ESG investors can help firms access green technologies and when they have more direct purview of firms' suppliers. We employ investor-level acquisitions as quasi-exogenous shocks and additionally analyze a separate firm–supplier sample to support the hypotheses with largely consistent results. Managerial Summary: Environmental, social, and governance (ESG) investors are increasingly expected to act as private regulators, using ownership stakes to steer companies toward sustainability. Yet, looking only at whether a focal firm cleans up its own operations can be misleading because it ignores what happens in the broader supply chain. Using global firm data from 2006 to 2019, we find that companies under strong ESG investor pressure generate lower direct emissions but may shift pollution to suppliers, leaving the combined emissions unchanged. We also provide suggestive evidence that this outsourcing is reduced and sometimes can become reduced when investors can help firms adopt green technologies and directly oversee supplier practices. **KEYWORDS** environmental performance, ESG, principles for responsible investment, socially responsible investors, supply chain 1 |

## 3. From hypothesis testing toward inference to the best explanation: A PEEBI testimonial structure for abductive studies in strategy

**Authors:** Sandeep Devanatha Pillai, Brent Goldfarb, David A. Kirsch, Seojin Kim, Evan Starr

**DOI:** [10.1002/smj.70114](https://doi.org/10.1002/smj.70114)

**Published:** 2026-08-02

**Keywords:** abduction, narratives, philosophy of science, reasoning, testimony

### Fields & Theories:

- **Fields:** Strategic Management, Research Methodology, Epistemology
- **Theories:** Abduction, Inference to the Best Explanation, PEEBI Framework

## Abstract:

Research Summary: Though scholars employ abduction, there is no agreed-upon structure to reporting their findings. Moreover, the traditional hypo-deductive reasoning structure does not align with the epistemology of abduction. We propose an abductive testimonial structure, termed PEEBI, which consists of five sections in which the authors take prior knowledge and theories, establish the context and observations that are worthy of interest, identify and evaluate candidate explanations for the observed patterns, determine the best explanation and their reasoning for accepting it, and abstract the best explanation to a more generalizable theoretical contribution. Consistent with abductive epistemology, PEEBI advances knowledge in a modest, stepwise fashion. PEEBI foregrounds transparency and communication of the author's judgment and elevates the role of the readers by giving them information to better make judgments. Received: 24 December 2024 Revised: 6 July 2026 Accepted: 11 July 2026 DOI: 10.1002/smj.70114 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–25. [wileyonlinelibrary.com/journal/smj](https://onlinelibrary.wiley.com/journal/smj) 1 Managerial Summary: Researchers frequently make discoveries by starting from a surprising observation and reasoning backward to the best explanation. Yet, the field has no shared way to write up this kind of work, and the conventional hypothesis-testing template does not match how such reasoning unfolds. We propose a reporting structure, PEEBI, which consists of five sections in which the authors take prior knowledge and theories, establish the context and observations that are worthy of inter-

est, identify and evaluate candidate explanations for the observed patterns, determine the best explanation and their reasoning for accepting it, and abstract the best explanation to a more generalizable theoretical contribution. PEEBI makes the author's judgment transparent, giving readers the information they need to weigh the evidence and reach their own conclusions. #### 4. Shifting standards due to social class? The role of social class background in CEO career outcomes

**Authors:** Michelle Lee, Shelby L. Gai

**DOI:** [10.1002/smj.70113](https://doi.org/10.1002/smj.70113)

**Published:** 2026-07-30

**Keywords:** CEO compensation, CEO dismissal, social class, upper echelons theory

##### Fields & Theories:

- **Fields:** Strategic Management, Corporate Governance, Organizational Behavior
- **Theories:** Shifting Standards Model, Social Class Theory, Attribution Theory

##### Abstract:

Research Summary: This study investigates how social class background shapes CEO career outcomes. Extending the shifting standards model to post-appointment evaluation, we theorize that CEOs from lower-class backgrounds face persistently high confirmatory standards, producing asymmetric consequences. When their performance is strong, the high confirmatory standards amplify their success, resulting in higher initial and subsequent compensation compared to their higher-class counterparts. When performance falters, the same bar makes shortfalls more readily read as falling short of expectations, resulting in lower compensation and higher dismissal risk. We test these predictions using a novel dataset on CEO social class backgrounds from 1992 to 2018, supplemented with board interviews. The findings support our hypotheses, demonstrating how social class background operates as a double-edged sword by increasing rewards for success and penalties for failure. Managerial Summary: Does social class background affect how a CEO is evaluated? Drawing on Received: 27 March 2026 Revised: 11 July 2026 Accepted: 20 July 2026 DOI: 10.1002/smj.70113 This is an open access article under the terms of the Creative Commons Attribution-NonCommercial-NoDerivs License, which permits use and distribution in any medium, provided the original work is properly cited, the use is non-commercial and no modifications or adaptations are made. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–34. [wileyonlinelibrary.com/journal/smj](https://wileyonlinelibrary.com/journal/smj) 1 compensation and dismissal outcomes for U.S. CEOs from 1992 to 2018, along with interviews with directors, we show that CEOs' social class backgrounds shape how their performance is interpreted. CEOs from lower social class backgrounds receive higher initial compensation and are rewarded more when their firms perform well. But when performance weakens, these same CEOs face steeper pay cuts and higher dismissal risk than their higher-class peers. The same background that generates recognition when things go well makes shortfalls easier to interpret as underperformance. For boards, this suggests that background can quietly shape evaluations at the highest levels. For CEOs, perceptions of exceptional mobility and capability can become a liability when performance turns. K E Y W O R D S CEO compensation, CEO dismissal, social class, upper echelons theory 1 |

### **1. Jailcraft: Atmospheric Security Work in Violent Contexts**

**Authors:** Adrian Marrison, Jaco Lok, Mark de Rond

**DOI:** [10.5465/amj.2025.0026](https://doi.org/10.5465/amj.2025.0026)

**Published:** 2026-08-07

#### **Fields & Theories:**

- **Fields:** Organizational Theory, Security Management, Sociology of Work
- **Theories:** Practice Theory, Atmospheric Work, Affective Sensemaking, Atmotronics

#### **Abstract:**

Drawing on a 12-month immersive ethnography of prison officers in an English prison, we explore the relation between security work and atmosphere. We show how prison security hinges on officers becoming proficient in "atmospheric work," or a bundle of practices purposively oriented at sensing and modulating atmospheres in situationally adaptive ways to prevent violence. Colloquially known as "jailcraft," these practices involve sensing the prison' s atmosphere for signs of rising tension, amplifying atmospheric tension as a means of control, and dampening tension if actual violence is deemed imminent. Our conceptualization advances organization research that has tended to cast atmosphere as either a target object of aesthetic work or as a diffuse affective background to sensemaking. We show empirically that these approaches miss something crucial, and especially in the world of security work. This is because here atmosphere is neither a backdrop nor an embellishment but actively sensed and "worked" in real time. This means that security workers' "atmotronic" interventions reveal a form of agentic atmospheric engagement that is strikingly purposive, yet curiously non-aesthetic in orientation.

### 1. Behavioral Intervention Construal: A Framework for Understanding Inferences from Behavioral Interventions

**Authors:** Joseph S. Reiff, Jonathan E. Bogard

**DOI:** [10.1287/orsc.2025.21412](https://doi.org/10.1287/orsc.2025.21412)

**Published:** 2026-08-12

#### Fields & Theories:

- **Fields:** Organizational Behavior, Behavioral Economics, Management Science
- **Theories:** Signaling Theory, Behavioral Intervention Construal, Choice Architecture, Psychological Needs Framework

#### Abstract:

Organizations frequently use behavioral interventions—including incentives, messaging campaigns, and modifications to choice architecture—to influence people' s behavior. However, recent evidence suggests that such interventions often have inconsistent effects across implementations. To understand this variability, we build on the idea that interventions are not simply levers for changing behavior, they also signal useful information to decision makers. For example, when an option is set as the default, people may infer that it is recommended by the organization—an inference that can increase the likelihood that people stick with that option. However, when people perceive that defaults benefit the organization, those defaults may be rejected. Here, we propose a framework to better understand the effects of behavioral interventions by identifying the inferences they prompt people to draw. In developing this framework, we first characterize the defining features of behavioral interventions that determine how they are psychologically experienced. These features implicate five fundamental needs, which guide decision makers' information-seeking processes. From these needs, we derive a principled typology of inferences drawn by decision makers in response to behavioral interventions, bringing together scattered evidence for these inferences from across the behavioral sciences. The resulting framework entails predictions about when specific inferences will arise and how these inferences influence the overall effects of behavioral interventions. Utilizing the framework, we provide a tool for enhancing intervention design. Taken together, the current research offers an integrative framework for advancing theory on behavioral interventions while also outlining actionable insights for organizations hoping to promote behavior change at scale.

#### Fields & Theories:

- **Fields:** Strategic Management, Corporate Social Responsibility, Social Entrepreneurship
- **Theories:** Social Impact Assessment, Pareto Efficiency, Normative Decision Theory, Spillover Effects

## Abstract:

Strategy and management research has increasingly focused on understanding the role organizations play in society, offering valuable guidance for measuring social impact. In this article, we build upon multiple streams of this literature to propose an integrated approach for managing social impact of initiatives. Starting with a general definition of “impact” as the difference between the states of the world with and without the initiative, we propose a two-step approach for managing its social impact. The first is an analysis step, where the consequences of the initiative are evaluated descriptively in terms of (a) goal realization, that is, the extent to which it achieves its stated goals for contributing to society; (b) spillovers, that is, the extent to which it affects other financial or societal outcomes; and (c) alternative initiatives, that is, its effectiveness relative to alternative means of organizing to achieve the same goals. The second is an assessment step, where the initiative’s full set of benefits and costs from the first step is normatively assessed using (and potentially triangulating across) one or more of three methods: (a) using Pareto improvement as the basis for comparison, (b) calculating net impact using a single metric for aggregation, and (c) evaluating the nature of trade-offs involved (relative magnitude, equity, certainty, and agency). In addition to integrating relevant streams of existing work into a systematic approach for managing social impact, we offer an agenda for further research applying concepts and insights from management research to questions related to social impact.

**Published:** 2026-08-06

### Fields & Theories:

- **Fields:** Organizational Behavior, Human Resource Management, Remote Work
- **Theories:** Affective Events Theory, Emotion Dynamics, Goal Setting Theory, Energy Variability Mechanism

## Abstract:

As the prevalence and allowance of remote and hybrid work evolves, research has shown consistently mixed findings about how work location is related to worker energy and perceptions of daily performance. We aim to resolve this ambiguity by integrating affective events theory with ideas about emotion dynamics to develop new theorizing explaining why energy variability, rather than mean energy level, is an important predictor of daily goal progress. We test our hypotheses using a sample of 219 employees from one organization allowing remote and hybrid work, capturing individual hourly energy levels for five consecutive workdays (4,812 hourly observations). Our results show that on days when employees work from home (versus onsite), they have lower energy variability, which enables them to make more progress toward their goals and achieve their goals at a faster rate than expected that day. Moreover, we show that this effect is stronger when employees have higher remote work intensity (i.e., work from home more often). Our findings are robust to a number of controls (e.g., children at home, work location choice, industry). Practically, workers experience about 33% less energy variability on days working from home compared with onsite, and a one-point reduction in energy variability yields 26% higher goal progress and 31% higher goal progress velocity. Overall, this study advances theory on the relationship between daily work location, human energy, and goal progress and has immediate practical implications for employees, teams, and organizations as they continue to navigate the remote and hybrid era of work. History: This paper has been accepted for the Organization Science Special Issue on Remote and Hybrid Work: Transforming People and Organizations in a New Era. ##### **Fields & Theories:**

- **Fields:** Innovation Management, Entrepreneurship, New Product Development
- **Theories:** Lean Innovation, Constraints Work, Multiplex Innovation Process, Process Temporality

##### **Abstract:**

In a world of increasingly numerous and contradictory constraints, this study reveals how individuals can navigate hyper-constrained contexts to rapidly develop new deployable products. We draw on an in-depth field study of seven projects developing affordable, open-source ventilators in just 75 days during the coronavirus disease 2019 pandemic. Our analysis shows that innovation outcomes are fundamentally shaped by what we call “constraints work” —how individuals actively deal with and manage constraints—and find two types of constraints work that lead to divergent processes and outcomes. Four projects conducted “reductionist constraints work” as they scanned, prioritized, and sequenced the key constraints. They then followed the well-known lean innovation process to sprint to a functioning minimum viable product (MVP). In contrast, three projects counterintuitively slowed down at the outset to conduct “generative constraints work,” extreme mapping the full landscape of constraints and loading the design space even with additional hidden constraints. They then followed a “multiplex innovation process,” surfacing interdependencies among constraints and treating the resulting contradictions as design problems to be solved simultaneously. This process resulted in deployable products that went beyond the MVP, surpassing experts’ expectations. Regarding temporal pace, the multiplex innovation process entailed V-shaped acceleration (braking at the start, resisting the time pressure to confront the full complexity of tensions, and then, sharply accelerating to resolve them in parallel), whereas the lean innovation process entailed a linear acceleration. Our findings contribute to theories of innovation and new product development processes and temporality, advancing understanding of how individuals can successfully navigate an excess of multiple, contradictory constraints. Supplemental Material: The online appendix is available at <https://doi.org/10.1287/orsc.2022.16727>.

##### **Fields & Theories:**

- **Fields:** Entrepreneurship, Organizational Behavior, Diversity and Inclusion
- **Theories:** Individual Entrepreneurial Orientation, Identity Theory, Authenticity

##### **Abstract:**

Research on individual entrepreneurial orientation (Ind.EO) has yet to reveal the psychological conditions under which employees demonstrate Ind.EO in the workplace. Addressing this gap, we theorize that authenticity is a crucial mechanism linking identity-specific support to Ind.EO expression, thereby introducing an identity perspective to Ind.EO research. Using two-wave survey data from 952 employees among sexual and gender minorities in 47 countries, a validation study of 135 participants, and qualitative interviews, we demonstrate that authenticity fully mediates the effect of identity-specific support on innovativeness and

proactiveness, but not on risk-taking. These results expand Ind.EO theory by incorporating an identity-based psychological dimension.

### 1. Novelty and its genealogy: The role of discarded prototypes as repositories of innovation

**Authors:** Demetrius Lewis, Giacomo Negro, Isin Guler

**DOI:** [10.1002/sej.70037](https://doi.org/10.1002/sej.70037)

**Published:** 2026-07-31

**Keywords:** innovation, learning from failure, novelty, recombination, television industry

#### Fields & Theories:

- **Fields:** Entrepreneurship, Innovation Management, Strategic Management
- **Theories:** Recombination, Framing, Resource-Based View

#### Abstract:

In markets where consumers seek both novelty and familiarity in products, entrepreneurs generate prototypes that embody novel ideas but are often filtered out before market release. We propose that these discarded prototypes constitute reservoirs of novel product content that can later be repackaged in more acceptable ways to decision makers and consumer audiences. To evaluate this argument, we analyze the genealogy of U.S. primetime television series from 1955 to 1995, tracing how novelty flows across both broadcast series and unsold pilots. The results show that, conditional on launch, series whose novelty derives more from unsold pilots than from prior series achieve greater market success. These findings support the argument that discarded products can serve as 'hidden' repositories of innovation, shaping future outcomes through recombination and reframing. We discuss implications for entrepreneurship research, emphasizing how creators need to position and frame novelty to gain gatekeeper support and how gatekeepers can avoid systematically undervaluing novel recombinations. **MANAGERIAL SUMMARY:** This study examines how ideas abandoned during product development can become a source of competitive advantage. Our analysis shows that unsold television pilots contain more novel content than aired series, and using novel content from these pilots results in greater audience viewership. Broadly, this suggests that early-stage concepts that do not advance can still inform effective product positioning. For managers and entrepreneurs, the opportunity lies in reusing novel features from these prior efforts and presenting them in ways that make their value recognizable to decision makers. This requires repositioning the idea and explaining why it is more compelling in the current context, how potential risks have been reduced, and what conditions make adoption timely. **KEYWORDS** innovation, learning from failure, novelty, recombination, television industry 1 |

**Keywords:** difference-in-differences, stakeholder management, stakeholder orientation, stakeholder theory

#### Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Management, Corporate Governance
- **Theories:** Stakeholder Theory, Resource Dependency Theory, Institutional Theory

### Abstract:

Research Summary: Extending stakeholder theory into the entrepreneurship context, we examine the performance implications of externally imposed stakeholder orientation, which we conceptualize as non-chosen stakeholder orientation. Given the resource constraints, short time horizons, and high levels of uncertainty that characterize ventures, we argue that increased non-chosen stakeholder orientation can hinder venture performance. Analyzing 3981 U.S. ventures founded between 1980 and 1995, our staggered difference-in-differences analysis shows that constituency statute enactment, which exogenously increases orientation toward non-chosen stakeholders, is negatively associated with ventures' successful exits and external funding. Consistent with our theory, this effect is stronger for ventures with a majority of internal board members, as these ventures are likely to maintain a narrow set of chosen stakeholders. Our theory and findings contribute to the entrepreneurship and stakeholder management literatures by jointly considering the source of stakeholder orientation—whether voluntarily chosen or externally imposed—and the organizational context in which firms operate. Received: 7 February 2025 Revised: 16 July 2026 Accepted: 20 July 2026 DOI: 10.1002/sej.70041 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–31. [wileyonlinelibrary.com/journal/sej](https://onlinelibrary.com/journal/sej) 1 Managerial Summary: This study examines how engaging with “non-chosen” stakeholders—those imposed on ventures through legal or regulatory frameworks—affects entrepreneurial outcomes. Using data from 3981 U.S. ventures founded between 1980 and 1995, we leverage the enactment of constituency statutes as an exogenous shock to non-chosen stakeholder orientation. Our results show that greater focus on these stakeholders reduces the likelihood of successful exits, such as IPOs or acquisitions, and lowers the cumulative external funding ventures receive. This effect may arise because non-chosen stakeholders often require time, attention, and resources, diverting focus from growth opportunities and performance goals. These findings highlight that legally imposed engagement with stakeholders can constrain entrepreneurial growth and performance. #### Fields & Theories:

- **Fields:** Organizational Theory, Qualitative Research Methods, Organizational Behavior
- **Theories:** Embodied Knowledge, Affect Theory, Enactive Ethnography

### Abstract:

Abstract While ethnographers recognize vulnerability as revelatory, we have yet to understand how it generates embodied knowledge. This paper reconceptualizes vulnerability as the open exposure to affect and be affected by the world and others. Rather than treating vulnerability as a methodological risk or by-product of immersion, I argue that it constitutes a way of knowing: a practice for accessing the unspoken, visceral and embodied aspects of social life. I introduce the figure of the vulnerable performer: a researcher who

does not merely observe but enacts field practices under conditions of open exposure. Through this figure, I theorize how such exposure produces carnal knowledge –practical, sensuous, affectively grounded knowing. Drawing on a two-year enactive ethnography in a hospice, I identify three dimensions through which vulnerable performance generates carnal knowledge –sensorial openness, visceral reactions and the inter-subjective experience of time and space –showing how each renders organizing perceptible. Yet, the same exposure that enables such knowledge also carries ethical and methodological costs that cannot be treated as secondary to its gains. I therefore clarify when vulnerable performance is warranted, what it can reveal about the bodily and ethical dynamics of organizational life, and under what conditions such exposure can remain ethically sustainable.

### Fields & Theories:

- **Fields:** International Business, Global Value Chains, Corporate Social Responsibility
- **Theories:** Relative Autonomy, Private Transnational Governance, Power Asymmetry

### Abstract:

Abstract Private transnational governance institutions increasingly acquire regulatory authority in contexts of weak or inactive state regulation, yet their capacity to exercise it remains contested. We extend Poulantzas' concept of relative autonomy, understood as the capacity to act with organizational independence from specific fractions of capital while reproducing capitalist relations, to the transnational context. We develop this framework through a longitudinal case study of the Bangladesh Accord and its transition to the ready-made garments (RMG) Sustainability Council (RSC) (2013–2024). We identify three institutional conditions enabling relative autonomy: joint governance between labour and capital, organizational independence, and legally enforceable commitments. Under these conditions, transnational initiatives can move beyond symbolic compliance to discipline global brands and exert credible regulatory power. However, such autonomy is inherently unstable, provoking resistance from domestic capital and state actors, particularly in Global South contexts where such initiatives are contested as external impositions. We show that relative autonomy is not static but emerges from political contestations between capital and labour, and between global and domestic actors. While private governance featuring relative autonomy can temporarily constrain capital, it ultimately reproduces the capital-labour and North–South power asymmetries of global supply chains.

**Keywords:** career success, culture, gender, meta-analysis

### Fields & Theories:

- **Fields:** Organizational Behavior, International Management, Human Resource Management
- **Theories:** Social Role Theory, Cultural Dimensions Theory

## Abstract:

Abstract Gender disparities in career success –who earns more, advances faster, and feels more satisfied about their jobs and careers –persist across societies, yet how societal cultures shape the magnitude and direction of such disparities remains less understood. Drawing on social role theory, which recognizes the influence of cultural contexts on the enactment of gender roles, our meta-analysis examines how cultural levels and changes moderate the relationship between gender and career success. We consider both objective career success (salary, promotions, and rank) and subjective career success (career and job satisfaction) across 1115 studies spanning several decades and multiple countries. We find that the gender–career success relationship is influenced by a society’s levels of power distance, individualism, uncertainty avoidance, and motivation towards achievement and success. Unexpected patterns also emerged, illuminating the distinct role of each cultural dimension, differences between objective and subjective career outcomes, and meaningful variation across specific indicators of career success. We further highlight the importance of distinguishing between static cultural levels and their change over time. Overall, our findings offer implications for social role theory and gender gap research, as well as for multinational organizations seeking to promote and monitor gender equity.

**Keywords:** legacy, legitimacy, organizational identity, process theory, strategic reorientation

### Fields & Theories:

- **Fields:** Strategic Management, Organizational Theory, Historical Organization Studies
- **Theories:** Process Theory, Evaluative Authorization, Organizational Legacy

## Abstract:

Abstract

Strategic reorientation entails justifying new directions in light of the past. While organizations invoke their past when facing strategic shifts, these invocations can yield divergent outcomes, enabling renewal in some cases while constraining change or producing stagnation and even decline in others. Why do organizations that invoke their past in similar ways follow different trajectories? We develop a process theory of organizational legacy that locates the answer in evaluative authorization. Rather than treating organizational legacy as inherited historical content, we conceptualize it as a socially enacted process through which (re)interpretations of the past are activated, evaluated, and settled as normatively binding guides for action. This process determines whether and which interpretations acquire normative authority, remain contested, or fail to stabilize direction. By identifying evaluative settlement as the mechanism through which the past becomes binding, our theory explains why and how organizational legacy can enable adaptive renewal, constrain reinterpretation, or fail to organize action. This perspective repositions history as an active site of normative adjudication and clarifies how organizations make their pasts binding in ways that shape their futures. Organizations do not diverge because they inherit different pasts, but because they make those pasts binding in different ways.

**Fields & Theories:**

- **Fields:** Strategic Management, Technology Management, Organizational Theory
- **Theories:** Dynamic Capabilities, Algorithmic Status Inequality, Economics of General-Purpose Technologies

**Abstract:**

Abstract The Point by Wu advances a compelling framework for understanding algorithmic status inequality, demonstrating how computational beliefs and computational inequalities can interact to produce persistent status hierarchies within and across organizations. This Counterpoint accepts Wu's core observations while offering a complementary theoretical lens grounded in the dynamic capabilities framework and the economics of general-purpose technologies. Where Wu emphasizes structural constraints that render algorithmic hierarchies resistant to isolated interventions, this Counterpoint highlights organizational agency, specifically, the sensing, seizing, and transforming capabilities through which firms can detect, respond to, and potentially reshape algorithmic status dynamics. Rather than disputing Wu's diagnosis, this Counterpoint extends it by examining three complementary mechanisms: sensing capabilities (detecting status-stratifying algorithmic effects), seizing capabilities (mobilizing resources toward more inclusive algorithmic development), and transforming capabilities (reconfiguring human-algorithm relationships over time). These mechanisms work alongside the structural interventions Wu advocates rather than substituting for them. The dialogue between structural determinism and organizational agency in the context of algorithmic status inequality suggests a research agenda focused on the conditions under which dynamic capabilities are likely sufficient to overcome status-stratifying structural forces, how institutions might democratize adaptive capabilities, and what governance arrangements best combine structural intervention with capability development.

### 1. Bittersweet Symphony: A Music Theory Approach to Stakeholder Dissonance and Value Creation

**Authors:** Skyler Dana Clark-Hamel, Lena Bischoff, Zhongyuan Sun

**DOI:** [10.1177/01492063261469450](https://doi.org/10.1177/01492063261469450)

**Published:** 2026-08-05

**Fields & Theories:**

- **Fields:** Strategic Management, Stakeholder Theory, Business Ethics
- **Theories:** Stakeholder Theory, Tonal Harmony Framework, Value Dissonance and Resolution

**Abstract:**

Stakeholder theory emphasizes value creation for diverse stakeholders, yet it offers limited guidance for understanding how value is created when a firm's and a stakeholder's values differ. We reconceptualize firm-stakeholder relationships as dynamic processes in which value accumulates through the engagement and resolution of value dissonance. Drawing on tonal harmony from music theory, we develop a framework that treats dissonance not as a defect to be eliminated but as generative pressure for value creation. The framework evaluates value dissonance at the issue level and aggregates tension at the relationship level, enabling systematic assessment of where firms can productively intervene. We then theorize three mechanisms through which firms convert dissonance into value: managerial intervention, structural resolution, and timing. Our central insight is that value emerges from the sequenced movement between tension and release. This dynamic perspective advances stakeholder theory by explaining how value can be created across the full stakeholder portfolio, including relationships that firms might otherwise avoid, suppress, or attempt to force into alignment.

## 2. A Multidimensional Model of Entrepreneurial Career Success: A Literature Review and Research Agenda

**Authors:** Maria Tamontseva, Scott E. Seibert, Jos Akkermans, Wouter Stam

**Published:** 2026-07-31

### Fields & Theories:

- **Fields:** Entrepreneurship, Organizational Behavior, Career Studies
- **Theories:** Ability-Motivation-Opportunity (AMO) Framework, Multidimensional Career Success Model

### Abstract:

People are choosing to pursue entrepreneurship as a career at increasing rates; yet, we lack an overarching conceptualization of entrepreneurial career success. Instead, scholars rely on a fragmented set of measures and outcomes, limiting cumulative knowledge about the factors that shape persistence and long-term success in entrepreneurial careers. To address this gap, we integrate career success and entrepreneurship research to develop a multidimensional model of entrepreneurial career success. Drawing on an empirically validated multidimensional framework from career literature, we organize the variety of individual success measures that have been used in the entrepreneurship literature, distinguishing entrepreneurial career success from related constructs such as venture performance and well-being. We further identify entrepreneurship-specific dimensions, including legacy and venture satisfaction, that reflect the heterogeneity of entrepreneurial careers and extend existing career success models. Using the ability-motivation-opportunity (AMO) framework, we review antecedents of entrepreneurial career success and suggest patterns of relationships with different objective and subjective Acknowledgments: The authors would like to thank the editor, Ute Stephan, and the anonymous reviewers for their insightful feedback and suggestions. ## 3. Understanding the Individual-Level Consequences of Strikes: A Systematic Review and Future Research Directions

**Authors:** Denise Vesper, Cornelius J. KönigUniversität des Saarlandes

**DOI:** [10.1177/01492063261466952](https://doi.org/10.1177/01492063261466952)

**Published:** 2026-08-01

### Fields & Theories:

- **Fields:** Human Resource Management, Industrial Relations, Organizational Behavior
- **Theories:** Strike Aftermath Framework, Social Support Theory

### Abstract:

Strikes are a recurring workplace phenomenon that affects strikers, their families, and managers, but also others such as commuters. To date, studies examining individual-level effects of strikes have been scattered across different fields of study. This systematic literature review summarizes studies on these effects and on how unaffected third parties, such as the public, evaluate strikes. We conducted searches in four databases. The 72 included studies show that strikes can have detrimental effects, for example, on psychological health, but these can be decreased with resources such as social support. Based on the existing literature, we developed the comprehensive strike aftermath framework as an overarching framework in which we incorporate avenues for future research. We conclude that research on this work phenomenon is still scarce and future research on long-lasting effects of strikes on managers' and employees' health and work attitudes is needed.

### 1. Does Shareholder Primacy Serve All Shareholders? A Review on What Shareholders Want Beyond Financial Returns

**Authors:** Simone M. Müller, Jannik Werner, Anne Ixmeier, Karen Schnatterly

**DOI:** [10.5465/annals.2025.0109](https://doi.org/10.5465/annals.2025.0109)

**Published:** 2026-08-10

#### Fields & Theories:

- **Fields:** Corporate Governance, Strategic Management, Stakeholder Governance, Business Ethics
- **Theories:** Shareholder Primacy, Stakeholder Theory, Agency Theory

#### Abstract:

Corporate governance research has largely been built on the assumption that shareholders are motivated by financial returns. Drawing on a broad multidisciplinary body of literature, our review challenges that assumption by showing that shareholders invest for a variety of nonfinancial reasons. Adopting the perspective of the individual shareholder as the ultimate provider of capital, we examine how these heterogeneous motives are represented within a governance system shaped by shareholder primacy. We argue that shareholder primacy does not merely overlook nonfinancial motives, but systematically represents some nonfinancial investment motives while marginalizing others. By revealing these inequalities among shareholders with different motives, our review highlights a fundamental limitation of a governance system that oversimplifies what shareholders want. Consequently, we challenge shareholder primacy from a shareholder perspective and advance stakeholder governance as an alternative able to accommodate shareholders holistically.

### 2. Scalability and Scaling in Management Research: Toward a Process Model Integrating Fragmented Literatures

**Authors:** Justin J. P. Jansen, Esther Tippmann

**DOI:** [10.5465/annals.2025.0099](https://doi.org/10.5465/annals.2025.0099)

**Published:** 2026-07-30

#### Fields & Theories:

- **Fields:** Strategic Management, Entrepreneurship, Organizational Theory, Innovation Management
- **Theories:** Dynamic Capabilities, Resource-Based View, Process Theory, Systems Theory

#### Abstract:

Despite a surge in scholarly interest, research on scalability and scaling remains fragmented with conceptual ambiguity and limited theoretical integration across disciplines. This review addresses these shortcomings by developing an integrative process model that synthesizes and links three distinct, yet interrelated dimensions of scalability—namely, resource, business model, and organizational scalability—to scaling as a dynamic capability and its consequences. Drawing on a systematic synthesis of 193 articles from management research, we clarify the conceptual distinction between scalability and scaling and reveal how their recursive interdependencies generate both virtuous and vicious growth dynamics. Moreover, we identify key mechanisms and contingencies that explain when scalability translates into scaling and sustained performance, and when it instead produces organizational strain, inequality, or environmental harm. Our framework encourages a balanced understanding of scaling as both an enabler of persistent high growth and a potential source of adverse spillovers. In so doing, our review establishes a unifying foundation for interdisciplinary research on the dynamics, limits, and consequences of scalability and scaling across organizations and society at large.
