Keywords: acqui-hires, acquisition motives, acquisitions, community, killer acquisitions, open-source software (OSS)

Fields & Theories:

- **Fields:** Strategic Management, Mergers and Acquisitions, Open Source Software, Inter-organizational Collaboration
- **Theories:** Resource-Based View, Motive-based View of Acquisitions, Complementarity Theory

Abstract:

Research Summary: What role do collaborations with a target's partners play in an acquisition, and how do these collaborations evolve post-acquisition? Research suggests that these collaborations are an important reason to acquire but often diminish post-acquisition. But if they tend to diminish, why are they a reason to acquire? Our analysis of acquirers' motives of 143 acquisitions of firms that collaborate with partners on 298 open-source projects resolves the outlined puzzle and reveals two types of acquisition motives: protection-motivated acquisitions—where acquirers focus on protecting the complementarity with the technology and the partners, and extraction-motivated acquisitions—where acquirers focus on extracting technology and employees. We find that protection-motivated acquisitions are associated with an intensification of collaborations, meanwhile extraction-motivated acquisitions are associated with a diminishment of the collaboration. We contribute to research on acquisitions, collaboration, and OSS. Received: 17 October 2020 Revised: 10 March 2026 Accepted: 31 March 2026 DOI: 10.1002/smj.70096 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–39. wileyonlinelibrary.com/journal/smj 1 Managerial Summary: Acquisitions don't just change ownership—they reshape collaboration with the target's partners. We studied 143 acquisitions of firms that sponsor and collaborate with partners on 298 open-source software projects. We track contributions before and after the acquisition. We find that the motives of the acquirers are associated with different outcomes. When acquirers aim to protect complementarities, contributions from the acquired target and its partners tend to rise. When they aim to extract resources—redeploying code or talent—contributions typically decline. Managerial takeaway: when you are a stakeholder in a particular OSS, examine how likely the acquisition of its sponsors is, and what the acquirers' motives are. 2. Artificial intelligence adoption and the demand for managerial expertise

Authors: Liudmila Alekseeva, José Azar, Mireia Giné, Sampsa Samila

DOI: [10.1002/smj.70099](https://doi.org/10.1002/smj.70099)

Published: 2026-05-06

Keywords: artificial intelligence, managers, organizational change, skills, technology adoption

Fields & Theories:

- **Fields:** Strategic Management, Technology Management, Human Capital, Organizational Change
- **Theories:** Skill-biased Technological Change, Resource-Based View, Organizational Adaptation

Abstract:

Research Summary: This paper examines how firms' adoption of artificial intelligence (AI) relates to the demand for managers and managerial skills. Using a skills-based measure of AI adoption derived from Lightcast job postings, we show that firms with greater AI adoption post more managerial vacancies and a higher share of such vacancies than less intensive adopters. These relationships are strongest in manufacturing and among firms with higher research & development intensity. Greater AI adoption is also associated with shifts in managerial skill requirements toward interpersonal and growth-oriented skills, including stakeholder management, creativity, and sales management, and away from routine administrative skills such as budgeting, planning, staff management, and customer service. Overall, the results suggest a re-configuration of managerial roles toward capabilities facilitating scaling, coordination, and adaptation in AI-enabled environments. Received: 30 September 2024 Revised: 20 March 2026 Accepted: 30 March 2026 DOI: 10.1002/smj.70099 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–27. wileyonlinelibrary.com/journal/smj 1 Managerial Summary: As artificial intelligence (AI) becomes more prevalent within firms, managers and executives face a practical question about how managerial roles may change. Using US job postings data from 2010 to 2022, we find that firms with higher AI adoption exhibit relatively greater demand for managerial roles, especially in manufacturing and among more innovative firms. We also find that more intensive AI adoption is associated with changes in what managers are expected to do. Demand shifts away from routine administrative skills such as budgeting and planning and toward growth-related skills such as sales, creativity, and stakeholder management. Overall, the evidence suggests a growing emphasis on managerial roles that relate to scaling, coordination, and organizational adaptation. - **Fields:** Organizational Behavior, Human Resource Management, Career Studies
- **Theories:** Career Script Theory, Social Constructivism, Relational Lens, Political Dynamics

Abstract:

Career scripts are typically treated as static frameworks that outline expectations of career paths. Little is known about how they are actively scripted, “on the ground” among career actors. We address this shortcoming by examining promotion scripts in a professional services firm. Through an inductive study of 91 participants, we identify different variations of the promotion script among human resource professionals and partners as gatekeepers. Adopting a relational lens, we uncover scripting processes and modes through which gatekeepers and promotion seekers jointly and intersubjectively construct the script. We extend career script scholarship in two ways. First, we theorize promotion scripts as polyphonic, multi-voiced, and partially contested among promotion actors, problematizing a view of career scripts as collectively shared representations. Second, we broaden focus beyond script content to empirically substantiate the notion of career scripting. We evidence how polyphonic promotion norms are scripted through (a) formalized and political scripting among gatekeepers, and (b) relational sponsorship practices between promotion seekers and gatekeeping sponsors, through which they jointly construct and differentially amplify the script variations. Our grounded model reveals how four scripting modes sustain polyphony in the promotion script, foregrounding the multi-actor, political, and relational dynamics implicated in the scripting of career norms.

Abstract:

Women in masculine-typed roles often experience their gender identity as a barrier to proving themselves by the ideal-worker norms of their male-dominated occupations. Yet, these women often internalize these experiences, blaming themselves for their struggles. They rarely identify as members of a disadvantaged identity group and often distance themselves from other women at work. How and when might such women externalize their struggles as gendered and collective? Drawing on data from a qualitative field study of staff working in many masculine-typed roles across various male-dominated occupations at a U.S. public-lands management organization, I develop grounded theory suggesting when and how some women might come to reappraise some of their struggles as rooted in the gendered cultures of their occupations rather than in their own deficiencies or idiosyncratic circumstances. I find that "parallel-peer connections" between similarly situated women outside their local tokenized work groups can spark transformative mindset shifts

when these encounters occur under the right conditions: during a window of sensemaking about a career impasse and in a less competitive context that is conducive to sharing confidences. Some women credited these shifts with prompting them to shed years of self-doubt and to promote gender equality at work. This study contributes to our understanding of supportive workplace relations among tokenized women and mindset shifts at work.

- **Theories:** Boundary Work, Governance Theory, Boundary Organizations, Process Theory

Abstract:

As firms increasingly host online communities, they need to mediate across the divergent interests of community members and the firm. One way of addressing this is to establish a formal governance structure referred to as a boundary organization (BO). Yet, how to design such an organization is a puzzle. If a BO is effective, it is likely to reshape firm-community relations and thus needs to be adjusted to respond to this change. Therefore, BOs must constantly adapt to the boundaries they span while also changing the very same boundaries. This research seeks to understand the mutual shaping of boundaries and BOs in firm-hosted online communities. To this end, we investigate the evolution of a BO set up by a firm hosting an online community engaged in a multiplayer game called "EVE Online." We conducted an eight-year longitudinal qualitative case study of the BO, tracing change in its practices and attendant boundaries. We show how boundaries and the BO mutually shape each other through (1) surfacing of boundary tensions, (2) BO renegotiation practices, and (3) BO's boundary spanning practices. Based on our findings we develop a theory that shows how mutual shaping unfolds through the varied enactment of these practices along the dimensions of where the voicing of discontent is channeled, how broad representation on the BO is, and the nature of information sharing. Our research contributes to research on boundary work by theorizing how the process of mutual shaping unfolds as an instable "chain reaction" with unintended consequences.

- **Theories:** Actor-Network Theory, Ecocentrism, Relational Agency

Abstract:

Mainstream entrepreneurship has traditionally focused on the human behaviors involved in the exploitation, innovation, and transformation of human-centric systems. However, this anthropo-centric view is inadequate in addressing today's grand challenges. Assuming human superiority in solving Earth's problems can be misleading. We challenge this assumption by adopting an eco-centric perspective that incorporates natural non-human actors (NNHAs). Using actor-network theory, we take a relational approach to explore how entrepreneurial behaviors can be theoretically advanced from inclusive, distributed, mutualistic, and co-creative relationships between human and NNHAs. We advance ecocentric entrepreneurship by redefining entrepreneurial agency, interactions, places, and ecosystems.

Fields & Theories:

- **Fields:** International Entrepreneurship, Corporate Governance, Strategic Management, International Business
- **Theories:** Agency Theory, Incentive-based View, Monitoring and Advocacy Mechanisms

Abstract:

Research Summary: This study develops an incentive-based view to examine the internationalization pace of young entrepreneurial firms after they have completed an IPO and expanded abroad for the first time. Using a sample of U.S. young entrepreneurial post-IPO firms that internationalized from 2005 to 2020, we find that the pace of internationalization increases when CEOs are compensated with more stock options and that this relationship is weakened when the stock option compensation of independent outside directors increases. By showing that incentives of different agents shape how fast young entrepreneurial firms internationalize, this study extends international entrepreneurship research by relaxing the implicit assumption that young entrepreneurial post-IPO firms that can internationalize fast will do so. **Managerial Summary:** What determines the internationalization pace of young entrepreneurial firms after they have already completed an IPO and expanded abroad for the first time? Our research finds that the internationalization pace of these firms increases when the CEO is compensated with more stock options. Absent CEO stock options, stock option compensation of independent outside directors provides a substitute through monitoring and advocacy for faster internationalization. Our research highlights that young post-IPO firms that can internationalize fast will not necessarily do so, stressing the distinction between the firm resources needed for a strategic action and top management motivation to pursue that action. **KEYWORDS** corporate governance, international entrepreneurship, new venture internationalization, new venture strategies, strategic management 1 |

- **Theories:** Interdisciplinarity Diffusion Framework, Knowledge Diffusion, Narrative-Integrative Review

Abstract:

Abstract

Interdisciplinary research is widely promoted as essential for advancing understanding of complex managerial and organizational phenomena. Yet, while often celebrated rhetorically, authors keep facing significant challenges when they seek to integrate insights from other disciplines into management scholarship. To that effect, we outline four research-informed cornerstone practices to help management scholars craft interdisciplinary research. Employing a narrative-integrative review approach, we inductively develop an Interdisciplinarity Diffusion Framework that maps interdisciplinary research according to the proximity of the source discipline to management (proximal–distal) and the primary mode of diffusion (theory, methods, or phenomena). Drawing on exemplary studies to illustrate our points, we show how different positions within this framework create distinct opportunities and barriers for authors. We draw on these findings, as well as on our own scholarly experience to detail four cornerstone practices, which serve as practical guidance for authors interested in advancing management theory with interdisciplinary research. Finally, we shift attention to the responsibilities of reviewers, editors, and institutions in shaping an environment where interdisciplinarity can flourish. We argue that supporting interdisciplinary research should be a rich and shared endeavour, central to the future intellectual vitality and societal relevance of management studies.

Fields & Theories:

- **Fields:** Organizational Behavior, Business Ethics, Leadership
- **Theories:** Social Learning Theory, Social Exchange Theory, Meaning-based Mechanism

Abstract:

Abstract Existing research explains the trickle-down of unethical leader behaviour in organizations primarily in terms of social learning and social exchange processes. We highlight a key limitation of these explanations and propose a novel, meaning-based mechanism. Drawing on Baumeister's account of meaning as a system of mental connections that enables people to interpret their experiences, we argue that organization members' search for meaning at work strengthens behavioural alignment with unethical leader conduct and thereby amplifies the trickle-down of unethical leader behaviour from higher-level managers through lower-level managers to employees. Across a multi-source survey of employees and their lower-level managers (Study 1), an experiment with participants in the lower-level manager role (Study 2), and two yoked experiments examining lower-level managers (Study 3a) and employees (Study 3b), we find convergent sup-

port for this interaction pattern. Studies 3a and 3b further show that this amplification occurs only when behavioural alignment is perceived as organizationally validated. Our findings reveal a potential dark side of searching for meaning at work and identify a new mechanism through which unethical behaviour cascades through organizational hierarchies.

- **Theories:** Historical Perspectives, Political Economy

Abstract:

Abstract The deglobalization process experienced in the early 2020s is not without precedent. This Special Issue leverages business history as a lens to generate new insights and to uncover previously hidden complexities and nuances. Studying previous periods of deglobalization and their varying drivers, outcomes, and responses, the papers in this Special Issue show how firms and individuals are more active in shaping deglobalization processes than commonly assumed, and that deglobalization is a periodical and uneven phenomenon. The Special Issue also points to exciting avenues for future research, not least to more fully understand the antecedents of deglobalization, and under what conditions possible drivers of deglobalization indeed translate into state action causing deglobalization.

Authors: Ruiqian Xu, Eric Yanfei Zhao, Dongning Yang

DOI: [10.1177/01492063261442445](https://doi.org/10.1177/01492063261442445)

Published: 2026-05-06

Fields & Theories:

- **Fields:** Strategic Management, Corporate Social Responsibility, Non-profit Management
- **Theories:** Resource Dependency Theory, Dependency Management, Buffering and Compartmentalization

Abstract:

Corporate foundations (CFs) are increasingly prominent vehicles for channeling commercial resources toward social causes. However, their pursuit of social missions may be shaped by the strategic priorities of their corporate sponsors. Drawing on a longitudinal panel dataset of 214 Chinese corporate foundations from 2009 to 2022, we examine how changes in sponsor firms' business portfolios are associated with inconsistency in CFs' philanthropic engagement, and identify organizational conditions under which this association is attenuated. We find that as sponsor firms adjust their business portfolios, their CFs are more likely to alter their portfolios of philanthropic activities, indicating a destabilizing association. This association is weaker when CF executives have stronger nonprofit backgrounds and when foundations receive a greater proportion of

funds from non-corporate donors. Furthermore, we document an asymmetric pattern consistent with activity compartmentalization: under these organizational conditions, changes in sponsor firms' business portfolios are less strongly associated with changes in mission-related activities than with changes in mission-unrelated activities. These findings contribute to research on dependency management by identifying organizational conditions associated with reduced sensitivity to sponsor firms' business changes, and by highlighting a form of buffering within prosocial activities under conditions of close oversight.

Authors: Janine Crivelli, Manuel Hess, Dean A. Shepherd, Joakim Wincent

DOI: [10.1177/01492063261444594](https://doi.org/10.1177/01492063261444594)

Published: 2026-05-12

Fields & Theories:

- **Fields:** Entrepreneurship, Business Ethics, Organizational Behavior
- **Theories:** Social Process Perspective, Multilevel Influence Mechanisms, Moral Evaluation Process

Abstract:

Despite growing scholarly attention on entrepreneurial misconduct, little is known about how founders shape and sustain fraudulent practices through their influence over employees. Using an in-depth case study of Theranos—a fraudulent startup—we develop a grounded process model that explains how startup fraud is not simply the result of regulatory gaps or individual overreach but a multilevel embedded phenomenon. We provide insights into how founders shape employee responses to fraud in startups, eliciting both resistance and complicity. Employees, in turn, engage in a fluctuating moral evaluation process, oscillating between condoning and condemning fraud. We contribute to the literature on startup fraud by distinguishing it from fraud in established organizations, advancing a social process perspective on employee moral processes, and illuminating how founders enact multilevel influence mechanisms that embed fraud in startup contexts.

3. Long-Term Organizational Growth Following Disasters: The Role of Collective Empathy

Authors: Lucrezia Nava, Kenichi Matsuno, Daniel Beunza

DOI: [10.1177/01492063261436832](https://doi.org/10.1177/01492063261436832)

Published: 2026-05-12

Fields & Theories:

- **Fields:** Strategic Management, Organizational Theory, Crisis Management
- **Theories:** Organizational Learning, Collective Emotion Theory, Collective Empathy

Abstract:

This study examines how organizations exposed to disasters transform collective adversity into sustained growth. Drawing on organizational learning and collective emotion theories, we argue that disasters, while often disruptive in the short term, can also foster the emergence of collective empathy—an organizational-level sensitivity to others' needs that motivates coordinated actions to support societal well-being—which, as organizations recover, contributes to long-term growth. Using difference-in-differences analyses on an 11-year panel of 575 Japanese companies affected by the 2011 Great East Japan Earthquake, combined with unique survey data, we find that organizations with moderate disaster exposure achieved, on average, higher long-term growth than those with low or high exposure. Further analyses suggest that this pattern is mediated by heightened collective empathy. The study identifies collective empathy as a key pathway to post-disaster organizational learning, underscoring the critical yet underexplored role of collective emotions in shaping organizational growth trajectories after disasters.

4. Practically Relevant: Reevaluating the “Relevance Problem” Through a Review of Practical Turnover Recommendations

Authors: Carl P. Maertz, Paula A. Kincaid, Julie I. Hancock, Cameron S. Noe

DOI: [10.1177/01492063261436833](https://doi.org/10.1177/01492063261436833)

Published: 2026-05-08

Fields & Theories:

- **Fields:** Strategic Human Resource Management, Organizational Behavior, Management Scholarship
- **Theories:** Evidence-Based Management, Rigor-Relevance Gap, Turnover Theory

Abstract:

Management research is frequently criticized for lacking practical relevance. Using voluntary turnover as a mature and managerially consequential research domain, we review 324 articles published between 2000 and 2023 and systematically extract 493 distinct practical recommendations. In advancing prior assessments of the relevance problem, we consider practical relevance at the recommendation-level of analysis, evaluating each recommendation along two core dimensions: data support (grounding in the study’s own empirical findings) and translatability (actionability for managers). We further situate recommendations within the turnover management process by coding for timing, level of action, and managerial goal of the recommendation. Our findings suggest that the relevance problem is less serious in the turnover research than commonly portrayed in the “relevance literature” regarding the management research in general. Although most studies included turnover management recommendations, only a small subset was both strongly grounded in the study’s evidence and readily actionable, with such high-quality guidance most concentrated on pre-hire interventions aimed at reducing overall turnover rates. In contrast, one of the gaps we detected was that such high-quality guidance is rarer for later-stage turnover management interventions focusing on reducing dysfunctional turnover. By contrasting high versus lower quality recommendations, we develop a five-step framework to help management scholars translate empirical findings into clear, context-sensitive, and actionable managerial guidance. Overall, we contribute to management scholarship by offering a more precise recommendation-level assessment of the relevance problem for use across areas, by identifying content-based gaps inhibiting improvement of practical relevance within the turnover research, and by improving the communication of practical recommendations in research articles.
