Abstract / 摘要:

Research Summary: Although multi-business firms can benefit from resource redeployment, we know little about the effects of alternative organizational arrangements on profits. This study examines a critical organizational choice, namely the centralization or decentralization of decision making. A formal model demonstrates that in the presence of business unit agency costs and costs of centralization, the profits from centralization versus decentralization depend not only on business relatedness—as emphasized in prior research—but also on return asymmetries between businesses. Moreover, in contrast with much of the research on contemporaneous resource sharing, the profitability of centralization does not increase monotonically with relatedness. The monotonic relationship holds only when relatedness leads to potential profits from redeployment in the intermediate range. As relatedness increases further, the advantage of centralization may decrease. Managerial Summary: Diversified firms often redeploy resources from one business to another, and the firms must decide whether to centralize or decentralize their redeployment decisions. Much of the literature on related diversification in general, and with respect to redeployment in particular, suggests that related diversification will lead to higher profits when decisions are Received: 2 January 2024 Revised: 25 November 2025 Accepted: 13 February 2026 DOI: [10.1002/smj.70077](https://doi.org/10.1002/smj.70077) *Strat Mgmt J.* 2026;1–29. [wileyonlinelibrary.com/journal/smj](https://onlinelibrary.com/journal/smj) © 2026 John Wiley & Sons Ltd. 1 centralized. However, the analysis presented here shows that centralization may not lead to higher profits from redeployment for highly related diversification, and firms may be able to obtain equivalent or higher profits by decentralizing these decisions. KEYWORDS centralization, economies of scope, related diversification, resource allocation, resource redeployment 1 |

研究总结：虽然多业务企业可以从资源重新配置中获益，但关于不同组织安排对利润影响的了解仍旧有限。本研究探讨了一个关键的组织选择，即决策的集中化或分权化。形式化模型表明，在存在业务单元代理成本和集中化成本的情况下，集中化与分权化的利润对比不仅取决于先前研究强调的业务相关性，还取决于业务间的收益不对称性。此外，与以往关于同期资源共享的大量研究不同，集中化的盈利能力并不随相关性单调增加。只有当相关性使重新配置的潜在利润处于中间范围时，这种单调关系才成立。随着相关性的进一步增加，集中化的优势可能会下降。管理总结：多元化企业经常将资源从一个业务重新配置到另一个业务，企业必须决定是集中还是分散其重新配置决策。大部分关于相关多元化（特别是关于资源重新配置）的文献表明，当决策由中央做出时，相关多元化会带来更高的利润。

Abstract / 摘要:

Research Summary: Scholars have theorized many factors shaping whether category spanning helps or hurts producers. We first synthesize evidence by meta-analyzing 25 years of empirical research, which reveals a null effect of spanning on average, yet with significant subsample heterogeneity. To unpack it, we theorize and find that spanning hurts producers more (i) when spanning occurs within bounded (vs. unbounded) category systems, (ii) when category associations are made by third parties (vs. insiders), (iii) when spanning is located at the product (vs. producer) level, and (iv) when spanning is occurring at once (vs. over time). Two mechanisms underpin these relationships: on the audience side, spanning influences evaluations when it is salient; on the producer side, spanning results in more positive outcomes when producers can control how their spanning behavior is conveyed to audiences. Because these two mechanisms operate jointly, their combined influence can result in spanning having a null, a positive, or a negative net effect. Our study identifies, across 16 theoretical configurations, where Received: 27 June 2025 Revised: 10 February 2026 Accepted: 20 February 2026 DOI: 10.1002/smj.70079 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–28. wileyonlinelibrary.com/journal/smj 1 these three baseline effects should be expected and clarifies why. Managerial Summary: Firms face a strategic dilemma: should they span across categories or stay focused? Prior studies show mixed results on whether spanning helps or hurts performance. Our findings suggest that outcomes depend on how salient spanning is to audiences and how controllable it is for producers. Spanning tends to hurt performance (i) when the categorization system is bounded (vs. unbounded), (ii) when third parties (vs. insiders) highlight the diversification, (iii) when individual products (vs. producers) span categories, and (iv) when spanning occurs simultaneously (vs. over time). Firms can benefit from spanning, but success depends on managing these four factors to reduce saliency and enhance controllability. **K E Y W O R D S** atypicality, audience appeal, categorization, category spanning, meta-analysis 1 |

研究总结: 学者们对跨类别行为 (category spanning) 是帮助还是损害生产者提出了多种影响因素。我们首先通过对 25 年实证研究的元分析综合了证据, 结果显示跨类别行为的平均效应为零, 但子样本存在显著异质性。为了拆解这一现象, 我们通过理论推导并发现, 在以下情况中, 跨类别行为对生产者的损害更大: (i) 跨类别发生在有界 (vs. 无界) 类别系统中; (ii) 类别关联由第三方 (vs. 内部人) 做出; (iii) 跨类别处于产品 (vs. 生产者) 层面; 以及 (iv) 跨类别是同时 (vs. 跨时) 发生的。两种机制支撑着这些关系: 在受众端, 当跨类别行为具有显著性时, 它会影响评估; 在生产者端, 当生产者能够控制其跨类别行为向受众传递的方式时, 跨类别行为会带来更积极的结果。由于这两种机制共同作用, 它们的综合影响可能导致跨类别行为产生零、正或负的净效应。我们的研究通过 16 种理论配置识别了这些效应的发生情境。

Abstract / 摘要:

Research Summary: Complementing the role of AI in facilitating search and identifying combinations of high value in inventive activity, we argue that AI fundamentally alters the innovation landscape by unlocking new combinations that were previously infeasible. This effect arises because AI acts as a powerful shared layer due to its predictive capabilities and its ability to transmit solutions across domains, thereby creating a bridge between previously unconnected elements. Utilizing a matched sample of patents, we show that inventions incorporating AI exhibit a greater degree of novel recombinations compared to those without AI, and that our proposed bridging mechanism is consistent with these novel recombinations. Our study contributes by identifying a new mechanism by which recombinations emerge in inventive activity while also highlighting the role of enabling technologies such as AI in facilitating such recombinations. Managerial Summary: How does AI impact inventive activity? We examine the question by studying the patenting activity of US firms over the period 2005–2023. We argue that AI fundamentally alters the innovation landscape by unlocking new combinations that were previously infeasible. This effect arises because AI acts as a powerful shared layer due to its predictive capabilities and its ability to transmit shared solutions, thereby creating a bridge between previously unconnected technological elements. Our analysis demonstrates that inventions that build on AI involve novel recombinations to a greater degree compared to inventions that don't, and that AI bridges and connects knowledge domains that were hitherto disparate. These findings indicate that AI is more than just an invention of a new method of invention, and that it fundamentally reshapes the nature of inventive activity. KEYWORDS artificial intelligence, inventive activity, knowledge recombination, patents and innovation 1 |

研究总结: 除了人工智能在辅助搜索和识别发明活动中高价值组合方面的作用外, 我们认为人工智能通过开启此前难以实现的组合, 从根本上改变了创新格局。这种效应的产生是因为人工智能凭借其预测能力和跨领域传输解决方案的能力, 充当了一个强大的共享层, 从而在以前互不关联的元素之间建立了桥梁。利用专利匹配样本, 我们证明了包含人工智能的发明比不包含人工智能的发明表现出更高层次的新颖重组, 且我们提出的桥梁机制与这些新颖重组是一致的。我们的研究贡献在于识别了发明活动中重组出现的新机制, 同时也强调了人工智能等赋能技术在促进此类重组中的作用。管理总结: 人工智能如何影响发明活动? 我们通过研究 2005–2023 年间美国企业的专利活动来探讨这一问题。我们认为, 人工智能通过开启此前难以实现的组合, 从根本上改变了创新格局。

Abstract / 摘要:

Research Summary: We extend ecosystem theory to cases in which platforms are complementors to each other: inter-platform ecosystems. Analyzing web traffic data on 241 European platforms, we identify and characterize demand-side inter-platform ecosystems, and propose a theory of why they emerge. We posit that demand-side inter-platform ecosystems solve matching problems generated by externalities platforms impose on each other. We describe four strategies platforms implement to solve these problems: network fusion (hosting competitor content), user-community-driven interactions (facilitating cross-posting), meta-platform (aggregating another platform), and platform concatenation (referring users to another platform for customized complementary services). We link these strategies to the nature of the externalities, the types of platforms involved and their competitive relationship. We conclude with implications for theory and suggestions for further research. **Managerial Summary:** Platforms increasingly act as complementors to each other, creating “inter-platform ecosystems” to boost cross-platform interactions and reduce search costs. Using web traffic data on 241 European platforms, we identify four strategies they use to that end: network fusion (hosting competitor content), user-community-driven interactions (facilitating cross-posting), meta-platform (aggregating another platform), and platform concatenation (referring users to another platform for customized complementary services). These strategies pose three main management challenges. First, because no single platform necessarily orchestrates the ecosystem, platforms must navigate complex multi-party coordination through bilateral agreements. Second, platforms face cooperation tensions: cooperating multiplies interactions but increases disintermediation risk. Third, pricing structures must account for cross-platform interdependencies, where a platform’s value depends on how its users interact with other platforms’. **KEYWORDS** cross-platform externalities, ecosystem, inter-platform ecosystem, nongeneric complementarities, platform 1 |

研究总结: 我们将生态系统理论扩展到平台互为补充者的案例: 平台间生态系统。通过分析 241 个欧洲平台的网络流量数据, 我们识别并界定了需求侧平台间生态系统, 并提出了其出现的理论原因。我们假设需求侧平台间生态系统解决了由于平台相互施加外部性而产生的匹配问题。我们描述了平台为解决这些问题而实施的四种策略: 网络融合 (托管竞争对手内容)、用户社区驱动的互动 (促进跨平台发布)、元平台 (聚合另一个平台) 以及平台级联 (将用户引导至另一个平台以获取定制化的补充服务)。我们将这些策略与外部性的性质、涉及的平台类型及其竞争关系联系起来。最后, 我们总结了理论含义并提出了进一步研究的建议。管理总结: 平台越来越多地充当彼此的补充者, 创建“平台间生态系统”以增强跨平台互动并降低搜索成本。通过使用 241 个欧洲平台的流量数据, 我们识别了它们为此采用的四种策略: 网络融合、用户社区驱动的互动、元平台和平台级联。

Abstract / 摘要:

Research Summary: This study investigates how AI recommendation algorithms shape complementor strate-

gies and market equality on digital platforms. Using two quasi-natural experiments from a food-sharing platform, we examine impacts of sequential algorithmic upgrades: from a location-based baseline to popularity-based (PopRec) and then personalization-based (PersRec). Analyses of over 1.7 million observations reveal that PopRec drives complementors to concentrate on a few offerings, while PersRec encourages new product introduction; yet these strategic shifts come at the expense of one another. Furthermore, PopRec reduces revenues of superstars but boosts revenues for long-tail complementors, enhancing market equality. Conversely, PersRec exacerbates market inequality by asymmetrically benefiting superstars. By bridging platform orchestration and AI frontiers, this study demonstrates the strategic potential of AI in platform management while underscoring the importance of algorithmic accountability. Managerial Summary: Digital platforms increasingly deploy AI recommendation algorithms to manage ecosystem performance. This study reveals that these algorithms also function as effective orchestration mechanisms, incentivizing and shaping complementor offering strategies at scale. We find that popularity-based algorithms incentivize complementors to specialize and concentrate on a few core product offerings, while personalization-based algorithms foster broader new product introduction. Our results demonstrate the vital strategic value of AI for managing platform ecosystems. Crucially, both algorithms present inherent trade-offs for complementor strategies and trigger unforeseen market dynamics. Platform owners must meticulously design and implement algorithmic systems, balancing ecosystem generativity with operational control and considering far-reaching market inequality implications. KEYWORDS artificial intelligence, digital platform, market equality, platform orchestration, recommendation algorithm 1 |

研究总结：本研究调查了人工智能推荐算法如何塑造数字平台上的补充者策略和市场公平。利用来自一个食品共享平台的两个准自然实验，我们研究了算法顺序升级的影响：从基于地理位置的基准到基于流行度的算法（PopRec），再到基于个性化的算法（PersRec）。对超过 170 万条观测数据的分析显示，PopRec 促使补充者集中于少数产品，而 PersRec 则鼓励新产品的引入；然而，这些策略转变是以牺牲彼此为代价的。此外，PopRec 降低了明星补充者的收入，但提升了长尾补充者的收入，增强了市场公平性。相反，PersRec 通过不对称地惠及明星补充者而加剧了市场不平等。通过连接平台编排和人工智能前沿，本研究展示了人工智能在平台管理中的战略潜力，同时强调了算法问责的重要性。管理总结：数字平台越来越多地部署人工智能推荐算法来管理生态系统绩效。本研究揭示了这些算法还充当了有效的编排机制，在大规模范围内激励和塑造补充者的产品供应策略。

Abstract / 摘要:

Skill demands evolve over the course of individuals' careers, as new roles demand different kinds of skills from previous jobs. Yet, skill portfolios can be slow to change. We posit that this tension between dynamic job demands and durable skills creates career dilemmas for building the right portfolio of skills for long-term success. Studying a group of scientists in the pharmaceuticals industry, we argue and find that while specialization helps scientists to advance faster initially, it holds scientists back once they reach managerial ranks where coordination skills are required. Within managerial ranks, scientists with broader experience will

advance faster since their experience will develop broader knowledge and more diverse social capital, which in turn will help them build coordination skills. While we find some evidence that employees try to adapt to these changing needs over their careers, such efforts to adapt are insufficient. Instead, we find that the level of specialization acquired while working as a scientist continues to influence promotion rates after people are promoted into management. We thus show that a skill portfolio built to help advancement at one stage of the career may hold employees back at subsequent career stages.

随着新角色对技能的要求不同于以往的工作，技能需求在个人的职业生涯中不断演变。然而，技能组合的改变往往是缓慢的。我们认为，动态的工作需求与持久的技能之间的这种紧张关系，为构建通往长期成功的正确技能组合带来了职业困境。通过对制药行业的一群科学家进行研究，我们提出并发现：虽然专业化最初有助于科学家更快地晋升，但一旦他们达到需要协调技能的管理职级，专业化就会阻碍其发展。在管理职级中，拥有更广泛经验的科学家晋升得更快，因为他们的经验会转化为更广博的知识和更多样化的社会资本，这反过来又有助于他们建立协调技能。尽管我们发现一些证据表明员工在职业生涯中试图适应这些不断变化的需求，但这种努力是不够的。相反，我们发现，作为科学家工作期间获得的专业化水平，在晋升到管理层后仍会继续影响其晋升率。因此，我们证明，在一个职业阶段为帮助晋升而构建的技能组合，可能会在随后的职业阶段阻碍员工的发展。

Abstract / 摘要:

How do individuals construct a sense of agency under persistent precarity? By studying a group of Thai sex workers whose lives are marked by poverty and stigma, we examine how individuals in persistent precarity construct different forms of agency, or agentic orientations, through self-narratives. We identify three narrative profiles with distinct agentic orientations: passive fantasizers, who convey shame and little agency; empowered victims, who channel anger into self-oriented agency; and compassionate carers, who exude acceptance and empathy and construct other-oriented agency. These agentic orientations are rooted in how individuals recount and connect their early life and current work experiences through recurrent emotional themes—shame, anger, or compassion—shaped by early encounters with influential institutions such as family (parents), community (Isaan), and religion (Buddhism). Building on these findings, we theorize a process we call crosstemporal emotional threading, through which individuals draw on core emotional threads to link their precarious experiences across time, enabling coherence in their self-narratives and shaping the construction of different agentic orientations. We further show that these agentic orientations manifest in distinct work behaviors and income levels. This study advances theoretical understanding of agency construction and contributes to research on persistent precarity, self-narratives, and the meaning of work.

在持续的不稳定 (precarity) 状态下，个体如何构建能动性？通过研究一群生活在贫困和污名中的泰国性工作者，我们考察了处于持续不稳定状态下的个体如何通过自我叙事构建不同形式的能动性或能动导向。我们识别出三种具有独特能动导向的叙事轮廓：消极幻想者，表现出羞耻感且几乎没有能动性；赋权的受害者，将愤怒转化为以自我为导向的能动性；以及富有同情心的照顾者，散发出接纳与同理心，并构建了以他人为导向的能动性。这些能动导向根植于个体如何通过反复出现的情绪主题（羞耻、愤怒或同情）来讲述并将早

年生活与当前工作经历联系起来，这些主题受到早期与家庭（父母）、社区（依善地区）和宗教（佛教）等影响力机构接触的影响。基于这些发现，我们理论化了一个被称为“跨时空情绪串联”的过程，个体通过这一过程利用核心情绪线索将跨越时间的不稳定经历联系起来，从而实现自我叙事的连贯性并塑造不同能动导向的构建。我们进一步展示了这些能动导向如何体现在截然不同的工作行为和收入水平上。本研究增进了对能动性构建的理论理解，并为关于持续不稳定状态、自我叙事和工作意义的研究做出了贡献。

Abstract / 摘要:

Despite the widespread adoption of work–family policies intended to advance gender career equality, key indicators of women’s progression, such as reduced turnover and increased promotion, still lag. We argue that gender gaps stem from the ideal worker norm, which triggers devaluation when employees prioritize personal life over work (i.e., personal life stigma). Advancing gender equality therefore requires deeper organizational transformation that embraces employees’ personal lives. We propose that cultivating a climate for work–life inclusion, rather than relying on formal work–family policies, is critical for reducing personal life stigma and improving gender equality in career outcomes. Yet, practices that enable organizations to foster such a climate remain unclear. Using qualitative interviews and a three-wave employer–employee survey study, we examine (a) whether work–life-inclusive climate reduces personal life stigma, above and beyond work–family policies, and thereby gender inequality in retention and promotion; and (b) which specific human resource practices contribute to building this climate. Our findings confirm the former and demonstrate that personal life appreciation practices are influential in fostering work–life inclusion. Furthermore, bundling these practices with gender meritocracy and gender authenticity practices enables organizations to holistically cultivate work–life inclusive environments that enhance gender career equality.

尽管旨在推进性别职业平等的“工作-家庭”政策已被广泛采用，但衡量女性职业进步的关键指标（如离职率降低和晋升率增加）仍然滞后。我们认为，性别差距源于“理想工作者规范”，当员工将个人生活置于工作之上时，这种规范会引发贬低（即个人生活污名）。因此，推进性别平等需要更深层次的组织变革，以接纳员工的个人生活。我们提出，营造工作-生活包容性气候，而非仅仅依靠正式的工作-家庭政策，对于减少个人生活污名和改善职业成果中的性别平等至关重要。然而，组织如何培育这种气候的具体实践仍不清楚。通过定性访谈和一项针对雇主-员工的三波调查研究，我们考察了：(a) 工作-生活包容性气候是否能超越工作-家庭政策，减少个人生活污名，从而减少留任和晋升中的性别不平等；(b) 哪些特定的人力资源实践有助于构建这种气候。我们的研究结果证实了前者，并表明“个人生活赏识”实践在促进工作-生活包容方面具有影响力。此外，将这些实践与“性别精英管理”和“性别真实性”实践相结合，能够使组织全面培育工作-生活包容的环境，从而提高性别职业平等。

Abstract / 摘要:

Many social movement organizations embrace a prefigurative mandate, enacting a desired future of social equality in the way they organize. While researchers have long recognized the difficulties these organizations face in realizing their egalitarian pursuits, the dynamics underlying a recurring puzzle remain unclear: how members of organizations explicitly committed to equality can negotiate meanings in their micro-level interactions in ways that cumulatively produce exclusionary dynamics. Our longitudinal qualitative field study of a refugee relief organization draws on an interactional framing perspective to explain this puzzle. We identify and theorize a phenomenon we term “moral exclusion” —the marginalization of heterogeneous perspectives through moral frames—even as members uphold an explicit commitment to equality. We elaborate the interactional dynamics through which moral exclusion emerges and becomes entrenched over time. Our model of moral exclusion has direct implications for literature on prefigurative organizing and interactional framing, while also offering conceptual clarity regarding broader organizational processes such as silencing and decoupling.

许多社会运动组织秉持预演性使命（prefigurative mandate），在组织方式中实践所追求的社会平等未来。虽然研究者早已认识到这些组织在实现其平等追求时面临的困难，但一个反复出现的谜题背后的动态机制仍不清晰：明确承诺平等的组织成员，如何在微观层面的互动中通过协商意义，从而累积产生排斥性的动态。我们对一家难民救助组织进行的纵向定性实地研究，借鉴互动框架视角来解释这一谜题。我们识别并理论化了一种被称为“道德排斥”的现象——即使成员坚持对平等的明确承诺，也会通过道德框架将异质性观点边缘化。我们阐述了道德排斥随时间产生并变得根深蒂固的互动动态。我们的道德排斥模型对关于预演性组织和互动框架的文献具有直接启示，同时也为理解更广泛的组织过程（如沉默和脱钩）提供了概念上的清晰性。

Abstract / 摘要:

Research on coordination has traditionally focused on social and procedural arrangements that align collective action, yet this perspective often overlooks the embodied, prereflective processes that underpin effective coordinating. We draw on the distinction between focal and subsidiary coordinating to argue that focal coordinating—deliberate efforts to structure workflows and align tasks—depends on subsidiary coordinating, which consists of taken-for-granted, backgrounded embodied actions that support joint work. Through an

ethnographic study of a neonatal intensive care unit relocation, we find that space change required iterative embodied repairs that targeted subsidiary coordinating, ultimately re-enabling focal coordinating. These repairs involved the reconfiguring of sensory access, inscribing new bodily habits, reallocating who-senses-what, and reorienting intercorporeal action. Our findings contribute to theories of coordinating and space by showing how spatial disruptions cannot be fully addressed through social or procedural adjustments alone, but must involve the reconstruction of embodied subsidiary coordinating.

传统上，协调研究聚焦于使集体行动保持一致的社会和程序性安排，但这一视角往往忽略了支撑有效协调的具身的、前反思的过程。我们借鉴“焦点协调”与“附属协调”的区别，认为焦点协调（即构建工作流和对齐任务的刻意努力）依赖于附属协调，后者由支撑共同工作的、被视为理所当然的背景具身行动组成。通过对新生儿重症监护病房搬迁的民族志研究，我们发现空间变化需要针对附属协调进行迭代式的“具身修复”，最终使焦点协调重新成为可能。这些修复涉及感官接入的重新配置、新身体习惯的刻画、谁感知什么的重新分配，以及身体间行动的重新定向。我们的发现为协调理论和空间理论做出了贡献，表明空间干扰不能仅通过社会或程序调整来完全解决，而必须涉及具身附属协调的重构。

- **理论:** 框架理论, 合法性, 话语制度主义, 框架收编

Abstract / 摘要:

Frames not only shape societal debates but underpin the legitimacy of industries and institutions. Yet, even the most resonant frames can be turned on their head—weaponized against their initial intent. While framing research has studied competition between distinct frames, less is known about how a single frame’s meaning can be strategically inverted to serve opposing agendas. We conceptualize this process as “frame co-optation,” a potent but underexplored mechanism of discursive power that can alter institutional trajectories. The striking reversal of Germany’s nuclear energy phaseout provides a unique opportunity to examine frame co-optation. Using a multimethod machine-learning approach, we analyze three decades of the German nuclear energy debate to understand how the security frame, initially mobilized by antinuclear activists to justify a nuclear phaseout, was co-opted by pronuclear actors to advocate for its reversal. Our analysis shows how the pronuclear actors co-opted the security frame by perforating, camouflaging, infiltrating, and overwriting the frame’s meaning to invert its direction while preserving its resonance. We contribute to framing theory by introducing frame co-optation as a mechanism of strategic meaning inversion that can restore the legitimacy of controversial industries, and, more broadly, destabilize shared meaning and thereby amplify discursive polarization.

框架不仅塑造了社会辩论，还支撑着行业和机构的合法性。然而，即使是最具共鸣的框架也可能被彻底反转——被武器化以反对其最初的意图。虽然框架研究已经探讨了不同框架之间的竞争，但对于单一框架的含义如何被战略性地倒置以服务于相反议程的了解较少。我们将这一过程概念化为“框架收编”（frame co-optation），这是一种强大但尚未得到充分探索的话语权力机制，能够改变制度的发展轨迹。德国弃核政策的惊人逆转研究框架收编提供了一个独特的契机。通过使用多方法机器学习方法，我们分析了德国长达三十年的核能辩论，以理解最初由反核活动人士动员用于证明弃核合理性的“安全框架”，是如何被挺核人士收编以倡导逆转弃核的。我们的分析表明，挺核人士通过对框架含义进行穿孔（perforating）、伪装（camouflaging）、渗透（infiltrating）和覆盖（overwriting），在保持其共鸣的同时反转了其方向。我们通过引入框架收编作为一种战略性意义反转机制为框架理论做出贡献，这种机制可以恢复有争议行业的合法性，并从更广泛的意义上破坏共识性意义，从而放大话语极化。

Abstract / 摘要:

We draw on theories of internal labor markets and human capital pipelines to examine promotion patterns within large organizations. We introduce the idea of pipeline orientation to describe the way different jobs shape advancement. Specifically, we compare “pipeline” jobs that foster advancement into a highly circumscribed set of jobs with “sprinkler” jobs from which people are promoted into many different higher-level jobs. We first explain the factors shaping a job’s pipeline orientation, then examine its implications for career advancement within internal labor markets. We argue that whether employees occupy pipeline or sprinkler jobs plays an important role in determining whether people make typical versus atypical moves as they are promoted. We further suggest that pipeline and sprinkler jobs engender a speed–flexibility tradeoff, as workers within pipeline jobs have less flexibility in where they could move next but are promoted more rapidly. We test these ideas with internal personnel data from a large corporation.

我们利用内部劳动力市场和人力资本管道理论来研究大型组织内的晋升模式。我们引入了“管道取向”(pipeline orientation)的概念来描述不同岗位塑造职业晋升的方式。具体而言,我们将那些促进员工晋升到高度受限岗位组的“管道型”岗位,与那些让员工晋升到许多不同高层岗位的“喷淋型”岗位进行了比较。我们首先解释了塑造岗位管道取向的因素,然后研究了其对内部劳动力市场职业晋升的影响。我们认为,员工占据管道型岗位还是喷淋型岗位,对于决定人们在晋升时是采取典型路径还是非典型路径具有重要作用。我们进一步指出,管道型和喷淋型岗位产生了速度与灵活性之间的权衡,因为管道型岗位内的工人在下一步流动方向上的灵活性较小,但晋升速度更快。我们利用一家大型企业的内部人事数据对这些观点进行了测试。

- **理论:** 协商秩序理论, 资源依赖理论, 社会秩序破坏, 董事会-CEO 关系动态

Abstract / 摘要:

We leverage negotiated order theory to develop a model of board corrective governance concerning CEO leadership. We extend research on corporate governance to theorize that a board's response to concerns about CEO leadership is a dynamic process of social order disruption and negotiation. When a disruption of an existing social order occurs, the CEO-board relationship is renegotiated by the board and, potentially, the CEO. We identify two critical relational dimensions—board affiliation with the CEO and board dependence on the CEO—that create four distinct negotiation conditions. Our model delineates the manner in which these negotiation conditions, in conjunction with the negotiation approach (cooperative or competitive) of the board and the CEO, give rise to a spectrum of first-order (i.e., retention, discipline, empowerment, dismissal) and second-order (i.e., changes to board dependence and affiliation) outcomes that influence the CEO-board relationship and subsequent corrective governance episodes. Our theoretical framework has important implications for governance research and practice, underscoring the need to view corrective governance decisions as interrelated negotiated outcomes shaped by evolving relational dynamics.

我们利用协商秩序理论开发了一个关于 CEO 领导力的董事会纠偏治理模型。我们扩展了公司治理研究, 提出董事会对 CEO 领导力担忧的反应是一个社会秩序破坏与协商的动态过程。当现有的社会秩序发生中断时, 董事会 (以及潜在的 CEO) 会重新协商 CEO 与董事会的关系。我们识别了两个关键的关系维度——董事会与 CEO 的亲缘性以及董事会对 CEO 的依赖性——这构成了四种不同的协商条件。我们的模型详细阐述了这些协商条件如何结合董事会与 CEO 的协商方式 (合作或竞争), 产生一系列一级结果 (即留任、惩戒、赋权、解雇) 和二级结果 (即对董事会依赖性和亲缘性的改变), 进而影响 CEO 与董事会的关系及后续的纠偏治理事件。我们的理论框架对治理研究和实践具有重要意义, 强调需要将纠偏治理决策视为受不断变化的关系动态影响的、相互关联的协商结果。

Abstract / 摘要:

Constructs are broadly considered as the foundation of theory. In this paper, we review past writings on constructs and construct validity and highlight how logical errors, or fallacies, are frequent in how constructs are developed and validated in management research. We elaborate four common construct fallacies—a novelty, a self-referential, a reification, and a weak or false analogy fallacy—that affect the validity of a claimed construct and contribute to construct proliferation. As existing construct validity procedures are insufficient in avoiding such construct fallacies, we conceptualize a complementary argumentation-based view of constructs that we extend into a framework for construct validation. We illustrate the uses and value of the framework in developing stronger constructs and in detecting construct fallacies, and, in doing so, draw out its broader implications for theory development and research.

构念被广泛认为是理论的基石。在本文中, 我们回顾了以往关于构念和构念效度的著作, 并强调了在管理研究中开发和验证构念时经常出现的逻辑错误 (即谬误)。我们详细阐述了四种常见的构念谬误——新奇性谬误、自指性谬误、物化谬误以及弱类比或虚假类比谬误——这些谬误会影响所声称构念的有效性并导致构念泛滥。由于现有的构念效度程序不足以避免此类构念谬误, 我们概念化了一种互补的基于论证的构念观, 并将其扩展为构念验证框架。我们说明了该框架在开发更稳健构念和检测构念谬误方面的用途与价值, 并据此推导了其对理论构建和研究的更广泛意义。

Abstract / 摘要:

Organizations that have committed to decentralizing authority can face situations in which centralized decision making is useful or necessary. However, centralization risks undermining an organization's perceived commitment to decentralization, which can threaten employees' motivation and commitment, as well as organizational legitimacy. Leveraging a comparative case study of four organizations that had explicitly committed to decentralize authority and that subsequently centralized authority during the COVID-19 crisis, we identify a process by which organizations can deviate from decentralization commitments while keeping those commitments in place. This process, which we call 'democratic deviation,' involves leaders and workers collectively authorizing centralization and then leaders enacting that authority with openness and transparency. In the three of our four cases that deviated democratically, decentralization commitments were upheld. Conversely, when centralization occurred implicitly through leader fiat and was then enacted opaquely by leaders, a process we label 'monocratic deviation,' decentralization commitments were undermined. Through this study, we develop a theory of the structural antecedents and processes of durable commitments to decentralization, prompting re-evaluation of decentralization's assumed fragility. More broadly, our theory suggests how organizations can uphold shared commitments even when they must deviate from them in the face of situational pressures.

致力于权力下放（分权）的组织可能会面临集权决策变得有用或必要的局面。然而，集权化存在削弱员工对组织分权承诺认知的风险，这可能威胁到员工的积极性和忠诚度，以及组织的合法性。通过对四家在新冠疫情期间明确承诺分权但随后又实施集权管理的组织进行比较案例研究，我们确定了一个组织既能偏离分权承诺又能保持该承诺效力的过程。我们将这一过程称为“民主偏离”，它涉及领导者和员工集体授权集权，随后领导者以开放透明的方式行使该权力。在我们的四个案例中，有三个案例通过民主偏离的方式维持了分权承诺。相反，当集权是通过领导者独断专行隐性发生并由领导者不透明地执行时（我们称之为“独裁偏离”的过程），分权承诺就会遭到削弱。通过这项研究，我们开发了一套关于持久分权承诺的结构性和过程理论，促使人们重新评估分权假设中的脆弱性。更广泛地说，我们的理论揭示了组织在面对压力必须偏离共同承诺时，如何才能继续维护这些承诺。

Abstract / 摘要:

Two-sided matching algorithms have been deployed at an increasing rate in labor markets all over the world in part because they can result in more equitable labor market matches. To achieve this desirable result, institutions using these algorithms often engage in a translation process to provide advice to market participants about how to optimally interact with the algorithm. We draw on theories of gendered agency to theorize that men may be more likely than women to engage in independent advice seeking—an agentic way of navigating one’s understanding by seeking out additional advice about how the algorithm works to form their own understanding beyond the baseline advice provided by institutions—and that this tendency leads men to have more success with the algorithm because of their deeper understanding. We test these predictions in the context of the National Residency Matching Program (NRMP), which uses a two-sided matching algorithm to match graduating medical students to residencies in the United States. Using archival data of medical students’ responses in an incentivized simulation of the NRMP and 66 interviews with medical students going through the match, we find evidence supporting these hypotheses. Men are more likely than women to seek additional advice beyond the baseline guidance, improving their understanding and success with the algorithm. These findings advance prior literature by demonstrating that group-based disparities may occur even when the algorithm itself is unbiased because individuals navigate understanding of these novel algorithms in ways shaped by their identities (i.e., gender). Funding: The authors thank UCLA Anderson’s Morrison Center for Marketing and Data Analytics for financial support. 双边匹配算法在世界各地的劳动力市场中被日益广泛地应用, 部分原因在于它们能够产生更公平的市场匹配结果。为了实现这一理想结果, 使用这些算法的机构通常会进行一种转化过程, 向市场参与者提供关于如何与算法进行最佳互动的建议。我们借鉴性别化能动性理论, 提出以下假设: 男性比女性更有可能进行独立建议寻求——这是一种能动性的导航方式, 通过寻求额外的算法运行建议, 在机构提供的基础建议之外形成自己的理解——这种倾向由于其更深入的理解, 使得男性在算法匹配中获得更大的成功。我们在美国国家住院医师匹配项目 (NRMP) 背景下测试了这些预测, 该项目使用双边匹配算法将医学院毕业生与美国住院医师培训项目进行匹配。通过对医学院学生在 NRMP 激励模拟中的响应归档数据以及对参与匹配的医学院学生的

66 份访谈，我们发现了支持这些假设的证据。男性比女性更有可能在基础指导之外寻求额外建议，从而提高了他们对算法的理解和成功率。这些发现拓展了现有文献，表明即使在算法本身公平的情况下，基于群体的差异仍可能发生。

- **理论:** 内在动机理论, 人际知觉, 动机过度简化, 职业倦怠

Abstract / 摘要:

Intrinsic motivation is highly valued in the workplace with employees encouraged to express the meaning and enjoyment they derive from their work. However, the current research identifies a cost of intrinsic motivation: managers allocate additional tasks to employees they perceive as more (versus less) intrinsically motivated. We establish this effect across task allocation paradigms using managers' actual employees, profiles of real workers randomly assigned to managers, and a laboratory experiment with a salient financial downside for the chosen employee (Studies 1a, 1b, and 2). Managers' preference to allocate additional tasks to intrinsically motivated employees is serially mediated by the naïve belief that these employees will enjoy the additional task (i.e., motive oversimplification), which, in turn, reduces perceived risk of burnout from the additional work (Study 2, Supplemental Studies 2 and 3). Notably, this preference persists in a six-day longitudinal study with repeated allocation decisions (Study 3) and can negatively affect organizations (Study 3 posttest). Two theory-driven interventions attenuate this preference by intervening on managers' decision environment (Study 4) and beliefs (Study 5). This research advances theory on motivation, person perception, and task allocation decisions and offers insights and solutions for the paradoxical burnout experienced by individuals who derive joy from their work. Funding: This research was supported by the Cornell ILR School, the Cornell SC Johnson College of Business, and a grant from the Cornell Center for Social Sciences awarded to both authors. 内在动机（内在激励）在职场中备受推崇，员工被鼓励表达他们从工作中获得的意义和乐趣。然而，本研究发现了内在动机的一个代价：管理者会向他们认为具有更高（而非较低）内在动机的员工分配额外任务。我们通过多种任务分配范式确立了这一效应，包括管理者的真实员工、随机分配给管理者的真实工人概况，以及一项对被选员工具有显著财务负面影响的实验室实验（研究 1a、1b 和 2）。管理者倾向于向具有内在动机的员工分配额外任务，这是由一种天真的信念所串联中介的，即认为这些员工会享受额外的工作（即“动机过度简化”），这反过来又降低了感知到的额外工作带来的职业倦怠风险（研究 2，补充研究 2 和 3）。值得注意的是，这种偏好在为期六天的重复分配决策纵向研究中依然存在（研究 3），并可能对组织产生负面影响（研究 3 后测）。两项基于理论的干预措施通过干预管理者的决策环境（研究 4）和信念（研究 5）缓解了这种偏好。本研究推进了关于动机、人际知觉和任务分配决策的理论，并为那些从工作中获得乐趣却经历悖论式职业倦怠的个体提供了见解和解决方案。

Abstract / 摘要:

Do women benefit more from gender-homophilous (all-women) or gender- heterophilous (mixed-gender) groups in remote training? Existing theories offer no clear answer, as remote training environments disrupt the social architecture that enables peer effects—weakening not only the collaborative structures that encourage cross-gender exchange but also the interpersonal cues that foster same-gender bonding. We argue that remote training environments reveal a key mechanism through which all-women peer groups confer distinctive benefits: identity-based trust. In all-women peer groups, shared gender identity can help participants transcend the relational barriers of remote interaction, fostering trust-based ties that facilitate mutual support. We test this argument in an 18-month randomized field experiment on a leading online career training platform, which randomly assigned over 2,700 unemployed women to all-women or mixed-gender virtual peer groups. We find that women in all-women groups were significantly more likely to complete their training on time, earn professional certification within a year, and secure in-field employment. Analyses of text communication data reveal three key patterns underlying identity-based trust in all-women groups: (1) multiple shared identities (i.e., marriage, motherhood, career), (2) affective expression, and (3) reciprocal exchanges of support. By contrast, interaction in mixed-gender groups was inhibited, preventing supportive dynamics—even among women—from forming. This study provides the first causal evidence on how peer gender composition shapes women’s career outcomes in remote training and illuminates the microgroup mechanisms through which gender- homophilous groups foster success even in digitally mediated environments. 在远程培训中, 女性是从性别同质 (全女性) 小组还是性别异质 (混合性别) 小组中获益更多? 现有的理论没有提供明确答案, 因为远程培训环境破坏了产生同伴效应的社会架构——不仅削弱了鼓励跨性别交流的协作结构, 也削弱了促进同性别联结的人际线索。我们认为, 远程培训环境揭示了全女性同伴小组赋予独特利益的一个关键机制: 基于身份的信任。在全女性同伴小组中, 共同的性别身份可以帮助参与者超越远程互动的关系障碍, 建立基于信任的纽带, 从而促进相互支持。我们在一项领先的在线职业培训平台上进行了一项为期 18 个月的随机实地实验, 将 2700 多名失业女性随机分配到全女性或混合性别的虚拟同伴小组中。我们发现, 全女性小组中的女性按时完成培训、在一年内获得职业认证以及获得专业领域内就业的可能性显著更高。对文本通信数据的分析揭示了全女性小组中基于身份的信任背后的三个关键模式: (1) 多重共享身份 (如婚姻、母亲身份、职业); (2) 情感表达; (3) 互惠的支持交流。相比之下, 混合性别小组中的互动受到抑制, 阻碍了支持性动态的形成。

Abstract / 摘要:

We introduce and study the concept of a “jagged technology frontier” to describe the uneven impact of artificial intelligence (AI) capabilities, where AI assistance improves performance for some tasks but worsens it for others, even within the same knowledge workflow and with a seemingly similar level of difficulty. In collaboration with the global management consulting firm Boston Consulting Group, we have developed realistic management consulting tasks and examined the human performance implications of using AI to perform complex and knowledge-intensive work. The preregistered experiment involved 758 knowledge workers. After establishing a performance baseline on similar tasks, subjects were randomly assigned to one of three conditions: no AI access, GPT-4 AI access, or GPT-4 AI access with a prompt engineering overview. For each one of a set of 18 realistic knowledge tasks within the frontier of AI capabilities ranging from creative to analytical tasks, subjects using AI outperformed those not using AI, completing 12.2% more tasks and completing them 25.1% more quickly on average while also delivering solutions of significantly improved quality. However, for a complex managerial task selected to be outside the frontier, subjects using AI were 19% less likely to produce correct solutions compared with those without AI, pointing to potential limitations of AI supporting knowledge workers. We discuss the positive and negative implications of AI-aided human performance in knowledge-intensive tasks. 我们引入并研究了“锯齿状技术前沿” (jagged technology frontier) 这一概念, 用以描述人工智能 (AI) 能力产生的不平衡影响。在这种情况下, AI 辅助在某些任务中能提升绩效, 但在另一些任务中反而导致绩效下降, 即便是在同一个知识工作流程中且难度看似相近的任务也是如此。通过与全球管理咨询公司波士顿咨询集团 (BCG) 合作, 我们开发了真实的管理咨询任务, 并考察了在复杂且知识密集型工作中应用 AI 对人类绩效的影响。这项预注册实验涉及 758 名知识工作者。在建立类似任务的绩效基准后, 受试者被随机分配到三种情境之一: 无法使用 AI、可以使用 GPT-4 AI、或可以使用 GPT-4 AI 并接受提示词工程概述。在 18 个处于 AI 能力前沿的真实知识任务 (涵盖从创意到分析的任务) 中, 使用 AI 的受试者表现优于未使用者, 平均多完成 12.2

Abstract / 摘要:

This paper introduces the Entrepreneurship in the Population (EPOP) survey, a nationally representative data source for understanding entrepreneurial activities across the United States since 2022. The EPOP survey is distinguished by its focus on a broad set of entrepreneurial activities and collects a wealth of information on the behaviors, challenges, and resources available to entrepreneurs. This data brief provides information on the design and measurement approach of the survey, discusses how to work with EPOP data, and outlines future plans for the survey, including a longitudinal data collection to support research on trajectories of current and prospective entrepreneurs.

本文介绍了“人口创业调查”(EPOP),这是一个自2022年起用于了解全美创业活动的具有全国代表性的数据源。EPOP调查的独特之处在于其关注广泛的创业活动,并收集了关于创业者行为、挑战及可用资源的大量信息。本简报提供了关于该调查的设计和衡量方法的详细信息,讨论了如何使用EPOP数据,并概述了该调查的未来计划,包括旨在支持对现有及潜在创业者发展轨迹进行研究的纵向数据收集。

Abstract / 摘要:

Drawing on a theoretical framework associated with the cognitive perspective, we propose that investors will rely on heuristic cognitive processes when signals from entrepreneurs are congruent or imbalanced incongruent. However, when signals are balanced incongruent, investors will engage in systematic cognitive processes that incorporate additional information from the herding behavior of other investors. We find evidence supporting our hypotheses in a sample of campaigns listed on a UK equity crowdfunding platform. Further analysis employing advanced machine learning techniques reveals that investors engage more in systematic processes when signals from entrepreneurs are in a weak form of balanced incongruence rather than a strong form.

基于认知视角的理论框架,我们提出,当来自创业者的信号是一致的或失衡且不一致时,投资者会依赖启发式认知过程。然而,当信号是平衡且不一致时,投资者将参与系统式认知过程,并整合来自其他投资者从众行为的额外信息。我们通过对英国股权众筹平台上的项目样本进行分析,发现了支持假设的证据。采用先进机器学习技术的进一步分析显示,当创业者信号呈现弱形式的平衡不一致而非强形式时,投资者会更多地参与系统式过程。

Abstract / 摘要:

Hybrid entrepreneurship as a side hustle is a widespread yet understudied coping strategy among low-income wage workers. This study examines how loss aversion is associated with such side-hustle activities and their links to well-being. We conducted a mixed-method study in Bangladesh. Quantitative analysis, based on surveys and lab experiments, indicates that loss aversion is associated with a higher likelihood of engaging in hybrid entrepreneurship, which is in turn linked to higher well-being. Qualitative analysis, based on in-depth interviews, illustrates mechanisms that may underlie these associations. Together, these findings provide insights into the protective role of hybrid entrepreneurship in poverty contexts.

混合创业作为一种副业，是低收入工资劳动者中广泛存在但尚未得到充分研究的应对策略。本研究考察了损失厌恶如何与此类副业活动相关联，以及它们与福祉之间的联系。我们在孟加拉国开展了一项混合方法研究。基于问卷调查和实验室实验的定量分析表明，损失厌恶与从事混合创业的可能性更高相关，而这反过来又与更高的福祉水平相关。基于深度访谈的定性分析阐明了这些关联背后的潜在机制。总之，这些发现为混合创业在贫困背景下的保护性作用提供了见解。

Abstract / 摘要:

Research Summary: How is the ownership distribution in new venture teams (NVTs) related to the novelty of a firm's inventions? Using an abductive approach and analyzing 5114 projects from 2148 German firms,

we find higher novelty when a majority owner is among the NVT members and when members of NVTs with unequal ownership splits participate directly in inventive projects. Our empirical facts and interview evidence suggest that unequal splits enhance decision-making mandates, enabling NVTs to avoid consensus deadlocks and empowering owner-inventors to foster novelty. Notably, the ownership split within the NVT appeared to matter more for novelty than the specific share held by owner-inventors. These insights contribute to our understanding of the interplay among intra-team ownership, organizational governance, inventor-entrepreneurs, and innovative outcomes in entrepreneurial ventures. Managerial Summary: At incorporation, new venture teams (NVTs) decide how to divide ownership among themselves. The distribution can vary from equal shares to a majority ownership structure. Ownership distribution can influence how NVTs make decisions under uncertainty and how independently individual NVT members can implement their idiosyncratic technological ideas. Our quantitative and Received: 29 March 2021 Revised: 20 November 2025 Accepted: 19 December 2025 DOI: 10.1002/sej.70014 © 2026 Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–30. wileyonlinelibrary.com/journal/sej 1 qualitative findings indicate that concentrating ownership with majority owners promotes more radical innovations, while an equal distribution entails the risk of leading only to incremental advances. Additionally, in NVTs with unequal ownership distribution, the participation of NVT members in R&D activities promoted novelty. Therefore, NVTs should carefully consider the implications for decision-making when determining their ownership distribution, as it can be a strategic tool for promoting innovation. KEYWORDS decision-making, founder-inventor, new venture teams, ownership split, technological novelty 1 |

本研究探讨了新创企业团队（NVTs）中的所有权分配如何与企业发明的创新性相关联。通过采用溯因法并分析来自 2148 家德国公司的 5114 个项目，我们发现当多数股东位列 NVT 成员之中，且所有权分配不平等的团队成员直接参与发明项目时，产出的新颖性更高。我们的实证数据和访谈证据表明，不平等的分配强化了决策授权，使 NVT 能够避免共识僵局，并赋予拥有所有权的发明者权力以促进新颖性。值得注意的是，NVT 内部的所有权划分对新颖性的影响似乎比拥有所有权的发明者所持有的具体份额更为重要。这些见解有助于我们理解团队内部所有权、组织治理、发明者兼创业者以及初创企业创新产出之间的相互作用。

Abstract / 摘要:

Abstract

Despite growing recognition that countries around the world must transition to a low-carbon economy, global greenhouse gas emissions continue to rise. One way that decarbonization has been obstructed, we argue, is by fossil fuel firms intentionally conflating their agenda with ‘the people’, evoking notions of national identity, security and prosperity. We develop the concept of carbon populism to explain why big oil, coal

and gas firms make representative claims typically associated with democratically elected governments. This adds a significant layer of difficulty for stakeholders endeavouring to enact decarbonization. Drawing on an in-depth study of fossil fuel industries in Australia (mainly coal and gas), we demonstrate how different forms of political representation in the public and political spheres influence national identity, expert knowledge and public policy. These artificial forms of representation legitimize fossil fuel industries' political activities, authorize public policies that benefit it, and enable the industry to enjoy national dominance. We conclude by arguing that decarbonization can be achieved by rejecting carbon populism in favour of inclusive and participatory democratic representation.

尽管人们日益认识到全球各国必须向低碳经济转型，但全球温室气体排放量仍在持续上升。本文认为，去碳化进程受阻的一个原因在于化石燃料公司有意将其议程与“人民”相混淆，唤起国家认同、安全和繁荣等观念。我们提出了“碳民粹主义”概念，用以解释为何大型石油、煤炭和天然气公司会提出通常与民主选举政府相关的代表性主张。这为致力于实施去碳化的利益相关者增加了显著的难度。通过对澳大利亚化石燃料产业（主要是煤炭和天然气）的深入研究，我们展示了公共和政治领域中不同形式的政治代表性如何影响国家认同、专家知识和公共政策。这些人为的代表形式使化石燃料行业的政治活动合法化，授权了有利于该行业的公共政策，并使该行业在国家层面占据主导地位。最后，我们主张，可以通过拒绝碳民粹主义并转向包容性和参与性的民主代表制来实现去碳化。

- **理论:** 合法性理论, 社会分类理论, 制度理论的微观基础, 得当性与效度框架

Abstract / 摘要:

Abstract This study advances research on organizational legitimacy by examining the microlevel mechanisms through which evaluators form propriety beliefs. Building on legitimacy-as-perception research, which posits that evaluators rely on validity cues to make judgments, we argue that individual evaluators draw on broader, more nuanced sets of information than previously acknowledged. Specifically, we theorize and show how distinct validity cues (authorization and endorsement) that coexist combine with evaluators' perceptions of an organization's categorical fit to shape propriety beliefs. Across two factorial survey experiments ($n = 1866$), perceived categorical fit emerges as the strongest and most consistent predictor of propriety beliefs. Validity cues shape propriety beliefs, but their effects are far from uniform. The findings also reveal that cue valence matters and that complex interplays of validity cues distinctly influence propriety beliefs. This research contributes to legitimacy literature, and more specifically to microlevel legitimacy by offering a granular perspective on how propriety beliefs get constructed from diverse informational cues. By introducing categorical fit as a novel explanatory mechanism, we extend existing theory and encourage further investigations of how it influences microlevel legitimacy perceptions and how various combinations of validity cues can shape evaluations of organizational legitimacy.

本研究通过考察评估者形成“得当性信念”的微观机制，推进了组织合法性的研究。基于“合法性作为感知”的研究（该研究认为评估者依靠效度线索做出判断），我们认为个体评估者利用的信息比以往公认的更广泛、更细致。具体而言，我们阐述并展示了共存的独特效度线索（授权与认可）如何与评估者对组织“范畴匹配”

的感知相结合，从而塑造得当性信念。通过两项析因问卷实验（ $n = 1866$ ），感知的范畴匹配成为得当性信念最强且最一致的预测指标。效度线索虽能塑造得当性信念，但其影响远非统一。研究结果还显示，线索的效价至关重要，且效度线索之间复杂的相互作用会显著影响得当性信念。本研究为合法性文献，特别是微观层面的合法性研究做出了贡献，为得当性信念如何从各种信息线索中构建提供了细致的视角。通过引入范畴匹配作为一种新的解释机制，我们扩展了现有理论，并鼓励进一步调查其如何影响微观层面的合法性感知，以及不同的效度线索组合如何塑造对组织合法性的评估。

Abstract / 摘要:

Abstract Prior studies on crisis management often highlight the adaptiveness of generalist leaders, whose diverse functional experiences allow for flexible and innovative responses. However, we propose that in situations where crises lead to abrupt shifts in dominant institutional pressures, leaders with specialized functional backgrounds potentially exhibit greater adaptiveness with their narrower cognitive focus and decisive implementation of primary institutional requirements. Using data from the COVID-19 outbreak in early 2020, we show that specialist municipal leaders in the Chinese government implemented social distancing policies more rigorously than their generalist counterparts when the dominant institutional demand shifted suddenly from economic development to public health protection. This relationship between functional specialization and strict policy implementation diminished when leaders possessed prior experience in crisis management or local communities, but was amplified when they held formal positions on provincial-level decision-making committees. Our study contributes to the crisis management literature by suggesting the adaptive potential of functionally specialized leaders during crises, underscoring the strength of their concentrated cognitive processing in navigating sudden institutional changes.

以往关于危机管理的研究通常强调通才型领导者的适应性，其多元化的职能经验允许灵活和创新的反应。然而，我们提出，在危机导致主导制度压力发生突然转变的情况下，具有专业化职能背景的领导者凭借其更集中的认知焦点和对主要制度要求的果断执行，可能表现出更强的适应性。利用 2020 年初新冠肺炎疫情爆发的数据，我们展示了当主导制度需求从经济发展突然转向公共卫生保护时，中国政府中职能专业化的市级领导比通才型领导更严格地执行了社交距离政策。当领导者具备危机管理或地方工作经验时，这种职能专业化与严格政策执行之间的关系会减弱；而当他们在省级决策委员会中担任正式职务时，这种关系则会增强。本研究通过揭示职能专业化领导者在危机期间的适应潜力，为危机管理文献做出了贡献，并强调了他们在应对突发制度变革时集中认知加工的力量。

- **理论:** 迁移的社会认知模型, 社会交换理论, 虐待性管理

Abstract / 摘要:

Abstract Most research on abusive supervision has primarily focused on the consequences for victims within the same organization. However, some victims may choose to leave their job instead of staying and retaliating against the organization or their supervisor. This paper seeks to understand how employees' experience of abuse from former supervisors affects their adjustment in a new workplace. Specifically, we examine how such abuse affects victims' in-role behaviours and job satisfaction in their new jobs. Building on the social-cognitive model of transference, we propose that the experience of former supervisors' abuse will lead to increased interaction avoidance with and decreased feedback seeking from current supervisors. We argue that these factors will in turn negatively influence victims' in-role behaviours and job satisfaction in their new workplace. Results from one field study and two experiments largely support our hypotheses, indicating that the experience of former supervisors' abuse affects victims' in-role behaviours and job satisfaction in their new environment through the mechanisms of interaction avoidance and feedback seeking. The paper discusses the theoretical and practical implications of these findings.

大多数关于虐待性管理的研究主要集中在同一组织内对受害者产生的结果上。然而，一些受害者可能会选择离职，而不是留在原组织或向上级报复。本文旨在了解员工遭受前任上级虐待的经历如何影响其在新工作场所的调适。具体而言，我们考察了这种虐待如何影响受害者在新工作中的角色内行为和工作满意度。基于迁移的社会认知模型，我们提出，前任上级的虐待经历会导致受害者对现任上级的互动回避增加，以及反馈寻求行为减少。我们认为，这些因素反过来会负面影响受害者在新工作场所的角色内行为和工作满意度。一项实地研究和两项实验的结果在很大程度上支持了我们的假设，表明前任上级的虐待经历通过互动回避和反馈寻求机制，影响了受害者在新环境中的角色内行为和工作满意度。本文讨论了这些发现的理论和实践意义。

- **理论:** 合法性理论, 社会认知理论, 行为视角

Abstract / 摘要:

Research grounded in the legitimacy-as-perception perspective has primarily conceptualized legitimacy as a socio-cognitive judgment, assuming that evaluators act in line with their propriety judgments by supporting legitimacy objects they deem appropriate and opposing those they judge as inappropriate. However, this assumed alignment between legitimacy judgments and behaviors has rarely been tested directly. Advancing a behavioral perspective of legitimacy therefore requires systematically examining when and why legitimacy manifests in action rather than judgment alone. We pursue this agenda through two experiments that disentangle evaluative and behavioral responses to legitimacy objects. Study 1 (MTurk; $n = 1,889$) manipulates self-interest through incentives, norm congruence through framing, and whether propriety judgments are measured prior to behavioral responses or not. Study 2 (Prolific; $n = 801$) replicates this design, focusing on norm congruence and propriety judgment measurement prior to behavioral responses. Our results reveal several inconsistencies. Acknowledgments: We thank our editor, Peggy Lee, for her support and constructive guidance. We also thank the two anonymous reviewers and the JOM method expert for their valuable feedback throughout the review process. 基于“合法性作为感知”视角的研究主要将合法性概念化为一种社会认知判断, 假设评估者的行为与其得当性判断一致, 即支持他们认为得当的合法性客体, 反对他们认为不得当的客体。然而, 这种假设的合法性判断与行为之间的一致性很少受到直接检验。因此, 推进合法性的行为视角需要系统地考察合法性何时以及为何体现在行动中, 而非仅仅体现在判断中。我们通过两项实验来实现这一目标, 将对合法性客体的评估反应与行为反应分离开来。研究 1 (MTurk; $n = 1,889$) 通过激励操纵自利动机, 通过框架操纵规范一致性, 并考察了是否在行为反应前测量得当性判断的影响。研究 2 (Prolific; $n = 801$) 重复了这一设计, 重点关注规范一致性以及在行为反应前测量得当性判断的影响。我们的研究结果揭示了几种不一致性, 为理解合法性如何从内部判断转化为外部行动提供了新的见解。
