1. When money isn't everything: Identifying stage-based patterns of entrepreneurial resource acquisition

Authors: Esther Leibel, Denise Falchetti, Siobhan O'Mahony
DOI: 10.1002/smj.70134
Published: 2026-10-01

Keywords: entrepreneurship, firm stage, framing, pitching, resource acquisition, social capital

Fields & Theories:

- **Fields:** Entrepreneurship, Entrepreneurial Financing, Social Entrepreneurship, Strategic Management
- **Theories:** Framing Theory, Network Theory, Signaling Theory, Resource Acquisition

Abstract:

Research Summary: Scholars often examine how entrepreneurs' existing ties predict resource acquisition. We investigated the reverse: How does the act of pitching generate new ties with investors? Using the context of the Slow Money community, we analyzed social entrepreneurs' pitches to impact investors. Rather than identify a single strategy that benefited all firms, we found that "stage-appropriate framing" facilitated resource acquisition by aligning with investors' expecta- tions. Late-stage entrepreneurs who emphasized finan- cial process framing acquired more financial capital. Conversely, early-stage entrepreneurs who emphasized social process framing developed more investor ties. By shifting attention from the importance of pre-existing networks to the potential of entrepreneurial pitches, our research explains how pitch framing can facilitate the acquisition of both financial capital and investor ties, thereby mitigating liabilities for early-stage firms. Managerial Summary: Entrepreneurs know that pitches help raise money, but we discovered that they Received: 5 April 2026 Revised: 13 July 2026 Accepted: 18 September 2026 DOI: 10.1002/smj.70134 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–32. wileyonlinelibrary.com/journal/smj 1 also foster investor ties. In studying pitch competitions in the Slow Money community, we found that different messages resonated with investors depending on a firm's stage. Early-stage entrepreneurs gained more investor ties when their pitches highlighted a willing- ness to collaborate and engage in true partnerships. Late-stage entrepreneurs attracted more funds when they focused on their business track record. In both cases, matching the pitch framing to the firm stage—and using engaging behavioral cues—helped founders attract stage-appropriate resources. Our research shows that entrepreneurs can raise not just financial capital but also build investor ties without relying on pre- existing networks—when their pitch aligns with their stage. K E Y W O R D S entrepreneurship, firm stage, framing, pitching, resource acquisition, social capital As investors, we see tons of businesses come to us at way too early. And they don't understand, and they just want money. They don't understand that we might be right for them [as a source of financing] five years from now. In the meantime, these are other sources they should be tapping. (Claude, angel investor, NYC) 1 |

2. Government as orchestrator: Ecosystem transformation at scale and speed

Authors: Ron Adner
DOI: 10.1002/smj.70129
Published: 2026-10-01

Keywords: coordinative fiat, crisis response, ecosystem orchestration, ecosystem reconfiguration, grand challenges, industrial policy

Fields & Theories:

- **Fields:** Strategic Management, Innovation Ecosystems, Non-market Strategy, Public Management
- **Theories:** Ecosystem-as-Structure, Orchestration Theory, Coordinative Fiat, Organizational Reconfiguration

Abstract:

Research Summary: Grand challenges are ecosystem challenges: success depends on aligning a multilateral set of public and private sector actors whose interdependent contributions determine whether a mission is achieved. This study examines how government can orchestrate ecosystem alignment by leveraging dis- tinctive capabilities to deliver solutions at scale with urgency. Using an ecosystem-as-structure analytic approach, it draws on Operation Warp Speed, the U.S. government COVID-19 vaccine initiative, to surface mechanisms and dynamics of ecosystem transformation. The analysis introduces coordinative fiat as a mode of coordination distinct from hierarchy, coercion, or mar- ket signals; considers the choices involved in designing a purpose-built orchestrating entity; links orchestration of the external ecosystem to reconfiguration of the orches- trator's own internal ecosystem; and identifies orchestra- tion capacity as a key constraint on ecosystem strategy. Managerial Summary: Grand challenges are ecosys- tem challenges: success depends on aligning a multilat- eral set of public and private sector actors whose interdependent contributions determine whether a Received: 2 July 2024 Revised: 7 April 2025 Accepted: 28 August 2026 DOI: 10.1002/smj.70129 This is an open access article under the terms of the Creative Commons Attribution-NonCommercial-NoDerivs License, which permits use and distribution in any medium, provided the original work is properly cited, the use is non-commercial and no modifications or adaptations are made. © 2026 The Author(s). Strategic Management Journal published by John Wiley & Sons Ltd. Strat Mgmt J. 2026;1–38. wileyonlinelibrary.com/journal/smj 1 mission is achieved. The Operation Warp Speed COVID-19 vaccine initiative demonstrates how govern- ment can drive alignment at speed and scale to address such challenges. The analysis highlights four lessons for leaders: (i) the use of coordinative fiat to align indepen- dent actors without relying on hierarchy or coercion; (ii) the design of orchestrating entities; (iii) linking transformation of external ecosystems to the transformation of internal ecosystems; and (iv) strategizing orchestration capacity as a key constraint on scope. While the discus- sion is anchored in the public sector, it holds clear impli- cations for private-sector initiatives as well. 2. In Pursuit of Ideal Data: Epistemic Enchantment and the Unintended Consequences of Datafying for Artificial Intelligence

Authors: Elmira van den Broek, Natalia Levina
DOI: 10.1177/00018392261484887
Published: 2026-10-01

Fields & Theories:

- **Fields:** Organizational Theory, Management of Information Systems, Human Resource Management, Sociology of Technology
- **Theories:** Epistemic Enchantment, Datafication, Socio-technical Systems, Organizational Ethnography

Abstract:

The increasing datafication of work has become a pervasive theme within organizations, particularly with the rise of artificial intelligence (AI) technologies that rely on data and machine learning to generate insights and decisions. Prior research has shown that datafication practices aimed at administrative control and accountability can transform organizations in profound and often unintended ways. Our research moves beyond investigating datafication for administrative purposes to explore how it unfolds when actors intend to extract knowledge through AI predictive modeling. Drawing on a three-year ethnography of a human resources (HR) department introducing AI for candidate screening, we find that datafication expanded far beyond the technology's initially envisioned scope. We explain this scope expansion by introducing the concept of epistemic enchantment: a collective process through which organizational members become captivated and mobilized by AI's promise to generate predictive, objective, and continuously improving insights from data, while overlooking the costs and risks involved. Our study reveals how datafication practices can expand endlessly as organizational members, enchanted by AI's epistemic promises, pursue the notion of ideal data as an ever-desired but never reachable goal.

2. The Power of Identity Pause: Perimenopause and the Embodiment Process

Authors: Madeline Toubiana, Jennifer E. Jennings
DOI: 10.5465/amj.2024.1435
Published: 2026-10-08

Fields & Theories:

- **Fields:** Organizational Behavior, Identity Studies, Gender and Diversity
- **Theories:** Identity Theory, Embodiment Theory, Identity Pause

Abstract:

A growing volume of identity scholarship has started to challenge the Cartesian separation of body and mind, highlighting the importance of embodiment. While such research is enlightening, studies do not provide in-depth understanding of how some workers, but not others, are able to develop embodied identities (i.e., identities that are bonded with and bounded by their physical body). In particular, little is known about how this embodiment process occurs—or fails to do so—when changes within a worker's body threaten their idealized identities (who they want and believe they should be). We examine this puzzle through an inductive study of perimenopause, which is a naturally occurring physiological transition experienced by most women. Unlike studies that have emphasized the importance of remedial identity or body work, our findings point to the criticality of an identity pause, which involves taking respite from striving to enact idealized identities. We illuminate how an identity pause gives workers the space to develop somatic attunement: the capacity to connect with, listen to, and respect their changing bodies. In so doing, our study calls attention to distinctive mechanisms that help develop embodied identities, advancing research on the body–identity nexus, embodiment, and women and work.

1. Event System Theory: A Decade of Progress and a Future of Potential

Authors: Frederick P. Morgeson, Terence R. Mitchell, Dong Liu
DOI: 10.5465/amr.2026.1065
Published: 2026-10-14

Fields & Theories:

- **Fields:** Organizational Theory, Strategic Management
- **Theories:** Event System Theory, Multilevel Theory

Abstract:

Organizations are dynamic, hierarchically structured entities. Such dynamism is reflected in the emergence of significant events at every organizational level. Despite this fact, there has been relatively little discussion about how events become meaningful and come to impact organizations across space and time. We address this gap by developing event system theory, which suggests that events become salient when they are novel, disruptive, and critical (reflecting an event' s strength). Importantly, events can originate at any hierarchical level and their effects can remain within that level or travel up or down throughout the organization, changing or creating new behaviors, features, and events. This impact can extend over time as events vary in duration and timing or as event strength evolves. Event system theory provides a needed shift in focus for organizational theory and research by developing specific propositions articulating the interplay among event strength and the spatial and temporal processes through which events come to influence organizations.

1. The Paradox of Inventors' Job Security

Authors: David Wehrheim, Eduardo Melero, Neus Palomeras
DOI: 10.1287/orsc.2025.21133
Published: 2026-10-13

Fields & Theories:

- **Fields:** Strategic Management, Innovation Management, Human Capital
- **Theories:** Incentives, Exploration vs. Exploitation, Human Capital Theory

Abstract:

This paper investigates how job security affects the types of innovations gener ated by corporate inventors. By increasing inventors' prospects of remaining with their current employer, job security strengthens their incentives to invest in firm-specific techno logical knowledge. Thus, whereas employment protection provides inventors with a safety net to fail that could facilitate exploration, it instead drives them to produce

innovations that draw more heavily on internal technologies and are less novel. We test this argument using matched employer–employee data constructed from patent records. To examine inventor-level responses to increased job security, we exploit the staggered adoption of wrongful discharge laws across U.S. states between 1980 and 1999. Using cross-state varia tion over time in a difference-in-differences framework, we find that increased job security leads inventors to produce innovations that rely more intensely on their firms' technolo gies, are less novel, and generate higher private value to their employers. 2. Diversity and/or Inclusion? Evidence from Disability Quota and Inclusion Laws in Brazil

Authors: Leandro Nardi, Marieke Huysentruyt, Tomasz Obloj, Thomaz Teodorovicz
DOI: 10.1287/orsc.2024.18693
Published: 2026-10-12

Fields & Theories:

- **Fields:** Strategic Human Resource Management, Organizational Behavior, International Business
- **Theories:** Institutional Theory, Diversity and Inclusion, Labor Market Economics

Abstract:

This paper studies a fundamental tradeoff created by quota laws and similar policies that seek to increase workplace diversity by mandating the hiring of disadvan taged populations. We show that firm-level responses to these policies can benefit mem bers of the targeted population seeking entry into employment while imposing unintended costs on those already employed. Failure to account for this tradeoff may lead firms and policymakers, when focused exclusively on the promotion of diversity, to pursue initiatives that may undermine the inclusion of incumbent underrepresented workers. To study this tradeoff, we develop a conceptual framework and empirically examine employ ment outcomes for people with disabilities (PwD) in Brazil. Specifically, we study firms' heterogeneous responses to an evolving institutional landscape: a 2012 reform that strengthened enforcement of Brazil's pre-existing but largely ineffective disability quota law, and the subsequent 2015 Inclusion Law, a broader nondiscrimination statute that expanded societal protections for PwD. Using matched employer-employee data, we find that stricter quota enforcement significantly increased hiring of PwD, particularly among noncompliant firms that began recruiting from previously underutilized labor pools. Yet these gains in representation came with uneven consequences for inclusion: Although job stability improved, wage gaps widened and career progression slowed for incumbent PwD relative to non-PwD, especially within firms that had failed to meet their quota tar gets. These adverse consequences persisted despite the enactment of the Inclusion Law, underscoring that nondiscrimination frameworks may be insufficient to offset the unin tended consequences of quota laws. 3. Worker Repositioning and Technological Change: Evidence from an Online Labor Market

Authors: Shun Yiu, Robert Seamans, Manav Raj, Teng Liu
DOI: 10.1287/orsc.2025.20566
Published: 2026-10-09

Fields & Theories:

- **Fields:** Strategic Management, Innovation Management, Labor Economics
- **Theories:** Human Capital Theory, Technological Disruption, Worker Adaptation

Abstract:

Technological change reshapes labor markets not only by changing labor demand but also by altering labor supply as workers reallocate effort across tasks and opportunities in response to technological advances. Yet research focuses more on demand-side effects than on how workers themselves adapt. In this research, we examine worker repositioning on a large online labor market following the launch of ChatGPT in November 2022. We argue that the launch of ChatGPT reduced expected returns to labor in exposed skill domains and develop and test a series of hypotheses regarding how this shock is associated with participation, horizontal positioning, and vertical positioning among workers on the platform. Using proprietary data on incumbent freelancers and a difference-in-differences design that leverages cross-sectional variation in preperiod AI exposure and skill level, we show that freelancers more exposed to AI shift away from prior domains and reorient bidding toward higher value contracts. In contrast, high skill-level freelancers, who face greater adjustment costs, are less likely to reduce participation on the platform, reposition across domains, and move upmarket. These findings highlight how technological shocks reshape labor markets through supply-side adaptation and how domain-specific human capital constrains worker responses. Funding: This work was supported by the Mack Institute for Innovation Management, Wharton School, University of Pennsylvania and the Smith-Richardson Foundation. 4. From Scarce Resources to Resourcing Spirals: A Theory of Mindful Resourcing

Authors: Cristina Rubino, Sara Jansen Perry, Ravi S. Kudesia, Ari Malka
DOI: 10.1287/orsc.2022.17009
Published: 2026-10-08

Fields & Theories:

- **Fields:** Organizational Behavior, Organizational Theory
- **Theories:** Resourcing Theory, Conservation of Resources Theory, Mindfulness

Abstract:

People in organizations often face demands in excess of their resources. Psycho logical theories of resources reflect this scarcity, emphasizing how people conserve or bal ance resources. Although they acknowledge that interventions, like mindfulness training, can create resources, these theories struggle to explain how as they assume that resources are necessarily scarce. In this study, we introduce a theory of mindful resourcing. Rather than reducing mindfulness to a scarce psychological resource that a person has, it reveals mindfulness to be a skillful practice that a person does to enhance their agency to create resources. Mindful resourcing theory shows how mindfulness skills form a foundation for resourcing—the ability to create and enact resources—and how resourcing reciprocally enhances mindfulness skills such that the practices of mindfulness and resourcing inter twine as mutually sustaining and supporting practices. We develop this theory across a three-phase research design that (1) introduces a conceptual model that sequences how these practices intertwine and (2) uses this sequencing to surface the otherwise implicit design structure of mindfulness trainings before (3) abductively building theory on how people enact and develop competence in mindful resourcing from longitudinal qualitative data of 98 nonprofit employees undergoing training. Our theory-building discovers the critical role of resourcing spirals—showing how employees create and enact resources by skillfully assembling spirals and recursively expanding those spirals into longer and more impactful sequences as they gain competence. Taken together, our study illuminates the understudied human activities by which people not only create and enact resources but learn to do so more mindfully. 5. Dominant Deceptions: How Future-Oriented Narratives Transform into Deception

Authors: Tiona Zuzul, Aharon Cohen Mohliver
DOI: 10.1287/orsc.2023.18038
Published: 2026-10-08

Fields & Theories:

- **Fields:** Entrepreneurship, Organizational Theory, Business Ethics
- **Theories:** Narrative Theory, Organizational Misconduct, Sensemaking

Abstract:

Drawing on a multiyear, qualitative study of a promising venture in a nascent industry, we develop a process model tracing how future-oriented narratives can trans form into deception. In the venture that we studied, the founder' s future-oriented narra tives were initially viewed as evidence of his visionary foresight. As these narratives traveled downward through the organization, employees responsible for operations trans lated this broad vision into specific targets and metrics. Some details described an attain able future; others were so far-fetched that they became liminal, falling into a gray zone between right and wrong. As internal and external demands for tangible progress grew, this expectations-reality gap prompted employees to engage in temporal reorientation, shifting their statements from "we will" to "we have." Their statements crossed from limi nal to deceptive, asserting as fact something that did not exist. Once formalized in presen tations, websites, and other artefacts, the claims became dominant deceptions: codified, specific, past- or present-tense deceptions deliberately reproduced across the organization. In this codified form, the deceptions became misconduct that, if detected, could have been acted on by social control agents. We propose that three enabling conditions sustained this transformation: visionary attribution (belief in the founder' s unique foresight), interpretive flexibility (the ambiguity of new technologies that allows for multiple plausible meanings), and moral justification (the framing of deception as serving a higher mission). Because the process unfolded diffusely and incrementally, the transformation could only be observed retrospectively in the accumulation of actions across individuals and over time. By tracing this process, we extend research in narratives and in organizational misconduct. Funding: Funding for this research was provided by the London Business School and the Harvard Busi ness School. 6. Feel Free to Chat About Your Kids? Exploring the Effects of Workplace Parenting Conversations

Authors: Yuxin Lin, Allison S. Gabriel, Katina B. Sawyer, Zhengguang Liu
DOI: 10.1287/orsc.2023.18043
Published: 2026-10-08

Fields & Theories:

- **Fields:** Organizational Behavior, Work-Life Interface, Human Resource Management
- **Theories:** Identity Management Theory, Boundary Management Theory

Abstract:

Workplace conversations are essential for collaboration, knowledge sharing, and relationship building. Although much of the literature has focused on work-related discussions, recent shifts toward the blurring of professional and personal boundaries sug gest that employees may increasingly converse about aspects of their nonwork lives. One such topic of conversation—parenting—presents a unique and understudied type of work place exchange given the central role of the parental identity for working parents and the opportunity for them to highlight this important identity through dialogue. In the current set of studies, we introduce workplace parenting conversations as dialogical, in-depth exchanges about parenting-related topics between coworkers who are parents. Drawing from identity management and boundary management theories, we propose that these conversations offer instrumental, affective, and relational benefits that positively impact behaviors across work and parenting role domains. Using a mixed-methods triangulation approach, we first explore the content and processes of workplace parenting conversations through qual-

itative interviews (Study 1A), followed by an experience sampling study test ing our model, complete with behavioral outcomes at work and home (Study 1B). We then explore the underlying micromechanisms connecting workplace parenting conversations to the mechanisms in our model through additional interviews (Study 2A) and a field experiment (Study 2B). Our findings contribute to the literature on workplace conversa tions by identifying an overlooked yet impactful form of workplace dialogue, exploring its primarily positive effects on employees' behaviors in both work and home contexts and uncovering unique micromechanisms associated with this specific type of conversation. Funding: This work was supported by the National Natural Science Foundation of China [Grant 72102210].

7. Repatterning Interactions in Remote Work Environments: Bolstering Psychological Safety Through Mutually Humanizing Self-Disclosure

Authors: Vanessa M. Conzon
DOI: 10.1287/orsc.2024.19818
Published: 2026-10-08

Fields & Theories:

- **Fields:** Organizational Behavior, Remote Work, Organizational Theory
- **Theories:** Psychological Safety, Role Management Theory, Mutual Humanization

Abstract:

Existing research on psychological safety suggests that remote work might make it more challenging for workers to engage in the sorts of interactions that promote psycho logical safety. This raises the question: How is psychological safety bolstered when groups work remotely? Drawing on data from a seven-year longitudinal qualitative study—including 275 interviews and approximately 330 hours of observations—of a professional services organization that shifted from an in-person work environment to a remote work environment, I present a process model of how psychological safety can be strengthened among workers interacting virtually. I find that remote work supports interactional patterns that facilitate self-disclosure among group members. Learning more about one another, workers become mutually humanized, and psychological safety is bolstered. This psycho logical safety is accompanied by a set of associated practices that help people coordinate on work tasks while also sustaining flexibility in where and when they work. Reflecting improved psychological safety and associated practices, group members attend to and accomplish both work tasks and nonwork activities. This study contributes to the psycho logical safety literature by identifying a distinct process through which psychological safety can be promoted in remote work environments: mutual humanization via self-disclosure, which is supported through interactional patterns facilitated by remote work. Importantly, this distinct group-initiated process expands theorization beyond its current focus on leader-initiated social learning. This study also identifies how psychological safety supports role management, integrating theories of psychological safety and work-nonwork roles to expand understanding of psychological safety' s positive consequences. History: This paper has been accepted for the Organization Science Special Issue on Psychological Safety.

Published: 2026-09-30

Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Management, Labor Economics
- **Theories:** Real Options Theory, Switching Costs, Transition vs. State Perspectives

Abstract:

Real-options-based research suggests that hybrid entrepreneurship serves as a transitional path to full-time entrepreneurship. Other theories posit that hybrid entrepreneurship is an optimal state. We refer to these opposing perspectives as the transition and state perspectives, respec- tively, and identify their differing implications. To this end, we examine how hybrid entrepre- neurship influences the impact of switching costs on full-time entrepreneurship entry and entrepreneurship exit. Our empirical results, based on large-scale U.S. data, reveal patterns more consistent with the state perspective. We highlight the need to consider variety among hybrid entrepreneurs and discuss how the state perspective can improve our understanding of hybrid entrepreneurship.

2. How Can We Research Social Mobility in Entrepreneurship?

Authors: Elsa T. Chan, Steven A. Brieger, Ngoc Luu, Marii Paskov, Mirela Xheneti
DOI: 10.1177/10422587261485969
Published: 2026-09-28

Fields & Theories:

- **Fields:** Entrepreneurship, Sociology of Entrepreneurship, Research Methods
- **Theories:** Social Mobility, Social Stratification, Multidimensional Measurement, Methodological Pluralism

Abstract:

Social mobility is a central concern in contemporary societies, yet its dynamics within entrepre- neurship remain insufficiently understood. This paper' s purpose is to facilitate research on entrepreneurial social mobility by making three key contributions: first, we examine the distinct conceptual and methodological challenges related to capturing social mobility in entrepreneur- ship and provide strategies for solving them; second, we introduce multidimensional social mobility measures that move beyond the predominant focus on income-based metrics in exist- ing quantitative research; third, we demonstrate how alternative quantitative and qualitative methods can produce more holistic evidence for understanding social mobility among entrepreneurs.

1. Artificial intelligence and venture capital: Revisiting sourcing, selection, and nurturing activities

Authors: Gary Dushnitsky
DOI: 10.1002/sej.70054
Published: 2026-10-14

Keywords: artificial intelligence, geographical proximity, information asymmetry, Knightian uncertainty, social capital, venture capital

Fields & Theories:

- **Fields:** Entrepreneurship, Entrepreneurial Finance, Venture Capital, Strategic Management
- **Theories:** Information Asymmetry, Social Capital Theory, Agency Theory, Mechanism-based View

Abstract:

Research Summary: Venture capital (VC) is an information- intensive form of entrepreneurial finance conducted under extreme uncertainty. Investors must originate promising opportunities, select ventures with sparse and strategically disclosed information, and monitor and support firms after investment. Prior research documents both formal mecha- nisms (e.g., staged financing, syndication) and informal mechanisms built on referrals, reputation, and constant interaction. Geographic and social proximity enable these mechanisms by lowering the cost of obtaining contextual information and coordinating action. We develop a mechanism-based account of how data and Artificial Intelli- gence (AI) reconfigure this established model. Our framework yields propositions on geographic dispersion in sourcing, portfolio selection, and the distinct effects of AI on monitoring versus value-added support. It also identifies boundary conditions associated with institutional setting and heterogeneous AI adoption. Managerial Summary: For venture capital firms, AI is not a single tool and adoption is not a binary choice. A fund may use data systems to identify founders, machine-learning models to organize deal flow, generative AI to summarize Received: 15 September 2026 Revised: 15 September 2026 Accepted: 24 September 2026 DOI: 10.1002/sej.70054 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–20. wileyonlinelibrary.com/journal/sej 1 diligence materials, or analytics to monitor portfolio compa- nies. Each application changes a different part of the VC process. In sourcing, AI can widen the funnel beyond warm introductions and local ecosystems, especially in sectors such as software and e-commerce where hiring, product, and customer signals are visible. In selection, AI can make diligence faster and more consistent, but models trained on past investments may favor ventures that resemble previ- ously funded companies and may miss novel opportunities for which historical analogues are weak. In post-investment activity, continuous operational data can partly replace physical presence for monitoring, while value-add support such as customer introductions, recruiting, strategy advice, and founder coaching remain relationship-intensive. The practical implication is a task-level approach: automate codifiable search and processing, retain independent human judgment where uncertainty is fundamental, and use AI to strengthen rather than erode trusted investor–founder rela- tionships. Funds also face organizational choices about building proprietary infrastructure, buying external tools, or combining the two. The appropriate...

2. Entrepreneurial theorizing with generative artificial intelligence

Authors: Sung Ho Park, Alex Murray
DOI: 10.1002/sej.70060
Published: 2026-10-14

Keywords: artificial intelligence, data-driven technologies, entrepreneurial cognition, entrepreneurial theorizing, large language models

Fields & Theories:

- **Fields:** Entrepreneurship, Cognitive Entrepreneurship, Strategic Management
- **Theories:** Entrepreneurial Cognition, Sensemaking, Causal Reasoning, Theorizing Processes

Abstract:

Research Summary: Whether large language model (LLM) assistance changes how entrepreneurs construct theories remains unclear. On the one hand, LLMs may help entrepre- neurs build more developed causal structures and surface diverse information that supports the formulation of dis- tinctive theories. On the other hand, LLMs may steer causal structures toward conventional forms and discourage the counterintuitive reasoning needed to develop distinctive theories. In a within-subject experiment with 199 partici- pants theorizing both with and without LLM assistance, we find no significant average treatment effect on either struc- tural or content properties. However, this null average effect masks a redistribution effect, where LLM assistance supplemented theorizing when unaided theories were less developed or distinctive but displaced participants' own theorizing when their theories were already more devel- oped or distinctive. Managerial Summary: Large language models (LLMs) can help entrepreneurs develop business ideas by surfacing

knowledge across domains and sharpening causal logic. At the same time, LLMs may also push reasoning toward con- ventional patterns and away from the counterintuitive ideas that are a source of breakthrough opportunities. In a study of 199 participants theorizing with and without LLM Received: 22 September 2026 Revised: 22 September 2026 Accepted: 28 September 2026 DOI: 10.1002/sej.70060 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–23. wileyonlinelibrary.com/journal/sej 1 assistance, we find that LLMs supported the development of causal structure and content distinctiveness when unaided theories were less developed or distinctive, whereas they had the opposite effect when those theories were already more developed or distinctive. This suggests that while LLMs can scaffold entrepreneurs still developing their theories, greater caution is warranted for those whose theories are already more developed or distinctive, as assis- tance may diminish those properties. Fields & Theories:

- **Fields:** Strategic Management, Entrepreneurship, Technology Management, Organizational Theory
- **Theories:** Future-oriented Theorizing, Organizational Design, Institutional Theory, Property Rights Theory

Abstract:

Research Summary: We propose that entrepreneurship and strategy research can develop theory about phenomena of the future rather than only explain those of the past. Research has potential for practical relevance when researchers make claims towards applications to decisions practitioners have yet to make. Theory grounded in a world that may differ from the observed world can be built through a process of extrapolation from technological trends, a practice utilized by entrepreneurs and science fic- tion authors alike. Assuming advances in artificial intelli- gence, we apply this process to three emerging phenomena: governing scarcity in metaverse virtual worlds, redesigning organizations around pervasive monitoring via wearable devices, and allocating the intellectual property rights of humanoid robots. We argue that embracing theory that speaks to the future can enhance the practical and educa- tional relevance of management research. Managerial Summary: Assuming artificial intelligence con- tinues to improve, we highlight three impending phenomena poised to transform conventional approaches to entrepre- neurship and strategy. First, in metaverse virtual worlds, managers must manage resources governed by artificial Received: 25 September 2026 Revised: 25 September 2026 Accepted: 5 October 2026 DOI: 10.1002/sej.70059 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–20. wileyonlinelibrary.com/journal/sej 1 scarcity. Second, with wearable devices allowing continuous monitoring, managers must consider alternative structures for vertical hierarchy and horizontal collaboration. Third, deployment of humanoid robots will complicate intellectual property rights and asset ownership. We propose that scholarship towards developing theoretical frameworks addressing these and other phenomena of the future will be relevant to both managers and students. Keywords: AI, artificial intelligence, ecosystems, value capture, value creation

Fields & Theories:

- **Fields:** Strategic Management, Innovation Ecosystems, Technology Management
- **Theories:** Ecosystem Theory, Value Creation and Capture, General-Purpose Technology Framework, Strategic Choice

Abstract:

Research Summary: We develop an ecosystem perspective on AI-enabled value creation, grounded in AI's characteris- tics as a general-purpose technology. We consider that AI can support multiple value propositions realized through distinct but interconnected ecosystems. Within this struc- ture, AI innovators face choices concerning which value propositions to support, whether to pursue them through general-purpose or specialized offers, and whether to make those offers open or closed. Users, in turn, are strategic actors facing choices among alternative ecosystem configu- rations of focal offers and complements through which the same value proposition might be realized. These choices by innovators and users may alter ecosystem roles and com- petitive relationships over time. We conclude by outlining research opportunities for strategy and innovation scholars examining how firms create and capture value in AI-enabled ecosystems. Managerial Summary: Value creation with AI depends not only on the technology's capability but on the actors whose combined contributions deliver a value proposition. AI sup- ports many value propositions, each through its own eco- system, with some elements shared across them. AI innovators choose which value propositions to serve, Received: 17 September 2026 Revised: 17 September 2026 Accepted: 28 September 2026 DOI: 10.1002/sej.70057 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–22. wileyonlinelibrary.com/journal/sej 1 whether to do so through general-purpose or specialized offers, and whether to make their offers open or proprie- tary. User firms choose among alternative configurations of offers and complements through which the same value proposition can be realized. These choices may shift the competitive relationships between actors within an ecosys- tem over time. This perspective surfaces questions of rele- vance for scholars and practitioners regarding value creation and capture with AI. 5. Whither business model innovation strategy in the age of AI?

Authors: Christoph Zott, Raphael Amit
DOI: 10.1002/sej.70058
Published: 2026-10-12

Keywords: artificial intelligence, business model, business model innovation, innovation strategy, learning system

Fields & Theories:

- **Fields:** Strategic Management, Business Model Innovation, Entrepreneurship
- **Theories:** Resource-Based View, Organizational Learning, Activity-Based View, Dynamic Capabilities

Abstract:

Research Summary: We argue that business models are transformed into auto-adaptive systems through embedded AI inference and learning activities. The competitive advan- tage of focal firms may increasingly depend on how effec- tively their activity systems learn relative to competing business models, with learning serving as a meta value driver. Such learning-based advantages may be difficult to replicate when they are

costly to create, path dependent, anchored in distinctive accumulated data, and rely on tightly coupled recursive feedback loops among business model activities. Entrepreneurs and corporate leaders thus become architects and curators of evolving learning systems and innovators of novel business models that are critical to their firm's value creation and sustainable performance. Managerial Summary: The competitive advantage of focal firms increasingly depends on new AI learning and inference activities, which serve as meta-value drivers in business models that learn faster, more broadly, and more reliably than competing business models. These dynamic learning- based advantages are difficult to replicate because they are costly, path dependent, anchored in specific accumulated data, and rely on tightly coupled recursive feedback loops Received: 21 September 2026 Revised: 21 September 2026 Accepted: 5 October 2026 DOI: 10.1002/sej.70058 This is an open access article under the terms of the Creative Commons Attribution-NonCommercial-NoDerivs License, which permits use and distribution in any medium, provided the original work is properly cited, the use is non-commercial and no modifications or adaptations are made. © 2026 The Author(s). 6. New wine, old bottles? Effective strategies of new GenAI firms

Authors: Kathleen M. Eisenhardt, Xilan Zhang
DOI: 10.1002/sej.70056
Published: 2026-10-12

Keywords: bifurcated uncertainty, entrepreneurial strategy, generative AI, process perspective, resource-based view

Fields & Theories:

- **Fields:** Strategic Management, Entrepreneurship, Technology Strategy, Generative AI
- **Theories:** Resource-Based View, Process Perspective, Bifurcated Uncertainty, Strategic Reasoning

Abstract:

Research Summary: Blending insights from GenAI, strategic reasoning, and empirical grounding in five illustrative ven- tures, we contribute a theoretical framework for effective strategies of new GenAI firms. They face bifurcated uncer- tainty (i.e., high uncertainty of a nascent market, moderate uncertainty of a somewhat predictable technology trajec- tory) such that two complementary strategic logics—Process Perspective (PP) and Resource-based View (RBV)—are rele- vant. Second, we identify process-based (i.e., well-designed business model and product innovation process) and resource-based (i.e., superior data, efficient orchestration, complementary resources) advantages. Some relate to GenAI, some generalize. Third, we address what is unique about GenAI entrepreneurship, including strategic implica- tions of GenAI, technology strategy when there is upstream technical dominance and many downstream firms, and a cross-technology comparison with technologies like software and predictive AI. Managerial Summary: The rapid trajectory of GenAI is stun- ning. Yet many new GenAI firms are simply thin wrappers around well-known LLMs. Drawing on five illustrative ven- tures, we contribute a framework for effective strategies for new GenAI firms. These firms face bifurcated uncertainty Received: 18 September 2026 Revised: 18 September 2026 Accepted: 28 September 2026 DOI: 10.1002/sej.70056 © 2026 Strategic Management Society. 7. How ventures maintain stakeholder support amidst operational legitimacy threats

Authors: Alex Murray, Susan Cohen, Farhan Iqbal
DOI: 10.1002/sej.70049
Published: 2026-10-07

Keywords: crowdfunding, legitimacy, legitimacy threats, resource mobilization

Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Communication, Cultural Entrepreneurship
- **Theories:** Legitimacy Theory, Rhetorical Practices, Stakeholder Theory

Abstract:

Research Summary: We explore how ventures mitigate operational legitimacy threats—threats that originate within the venture and challenge claims relating to the venture's ability to deliver on its promised value proposition. Through an induc- tive study of four ventures working to deliver their promised products following successful crowdfunding campaigns, we reveal a process of three rhetorical practices that ventures can use to maintain stakeholder support: humanizing the ven- ture, normalizing setbacks and resolutions, and revising prag- matic claims. The first two practices contribute to the formation of dispositional legitimacy buffers that allow the third practice to be effective in mitigating fallout from exposed operational legitimacy threats. We conclude by offer- ing contributions to the cultural entrepreneurship literature and to research on venture–stakeholder communication. Managerial Summary: Entrepreneurs must often determine whether to disclose operational issues to stakeholders. On one hand, entrepreneurs may resolve these operational issues without stakeholders ever knowing of their occur- rence. On the other hand, such issues could balloon to nega- tively impact whether a venture can deliver its promised Received: 1 April 2026 Revised: 31 August 2026 Accepted: 16 September 2026 DOI: 10.1002/sej.70049 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). 9. Paid-free differentiation in freemium: Understanding the balance between discovery and cannibalization and its implications for paid product sales

Authors: Joey van Angeren, Ksenia Podoynitsyna, Fred Langerak
DOI: 10.1002/sej.70051
Published: 2026-10-02

Keywords: differentiation, digital markets, freemium, network effects, third-party advertising

Fields & Theories:

- **Fields:** Strategic Management, Digital Markets, Product Strategy
- **Theories:** Freemium Strategy, Cannibalization vs. Discovery Trade-off, Network Effects

Abstract:

Research Summary: Entrepreneurs in digital markets often introduce free versions of their paid products to boost their visibility. This freemium strategy involves a trade-off between discovery and cannibalization. We study how feature-based differentiation between the paid product and its free version shapes this trade-off and its consequences for paid product sales. We theorize that the relationship between paid-free differentiation and paid product sales is inverted U-shaped, because moderate levels of paid- differentiation significantly reduce cannibalization costs while discovery benefits remain largely intact. We further argue that paid-free differentiation is more salient when the value of the free version is enhanced through network effects, but less so if the free version contains value- eroding, third-party advertising. We analyze paid apps from the iOS App Store utilizing the freemium strategy. Received: 22 May 2025 Revised: 9 September 2026 Accepted: 24 September 2026 DOI: 10.1002/sej.70051 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–24. wileyonlinelibrary.com/journal/sej 1 Managerial Summary: Freemium strategies by which entrepreneurs introduce a free product version to boost the dis- coverability of their paid product have become enormously popular in digital markets. But aside from providing discov- ery benefits, the free version also cannibalizes the paid product's sales. We investigate whether this trade-off can be resolved through value-adding, feature-based differentia- tion between the paid product and the free version. Analyzing paid apps from the iOS App Store utilizing the freemium strat- egy, we find that there is a point of optimal paid-free differen- tiation that favors substantial, though not maximal, differentiation. Paid-free differentiation is especially important when the free version provides more value to consumers by means of network effects. Paid-free differentiation is less important when the free version contains third-party adver- tisements that erode its value. 10. Logical reframing: A theory-based view of entrepreneurial persuasion

Authors: Timo Ehrig, Jens Schmidt
DOI: 10.1002/sej.70046
Published: 2026-09-29

Keywords: belief revision, Knightian uncertainty, persuasion, reframing, what-if thinking

Fields & Theories:

- **Fields:** Entrepreneurship, Strategic Management, Behavioral Strategy
- **Theories:** Theory-Based View of Entrepreneurship, Knightian Uncertainty, Ranking Theory, Logical Reframing

Abstract:

Research Summary: Prior literature that addresses how entrepreneurs systematically deal with Knightian uncer- tainty has primarily focused on individual entrepreneurs but has largely neglected that, to be successful, entrepreneurs must also persuade others of their view of the future. Uncertainty implies that others may initially have different and potentially conflicting framings of the future. In this arti- cle we offer a belief revision framework for persuasion under uncertainty based on the idea of logical reframing: using and communicating theories and what-if beliefs that allow recipients to draw logical conclusions in line with the sender's view. Our propositions identify the trade-offs the receiver has to make between contradictory explanations in her mind so she can be persuaded. The central insight from our framework concerns the role of filters, which are sets of beliefs that create resistance against an argument. Overall, our article contributes by taking the theory-based view of entrepreneurship to a multi-agent setting. We also continue the formalization of the theory-based view, introducing ranking theory, which can be used to model how agents revise their beliefs, to the management literature. Received: 24 October 2025 Revised: 20 August 2026 Accepted: 31 August 2026 DOI: 10.1002/sej.70046 This is an open access article under the terms of the Creative Commons Attribution License, which permits use, distribution and reproduction in any medium, provided the original work is properly cited. © 2026 The Author(s). Strategic Entrepreneurship Journal published by John Wiley & Sons Ltd on behalf of Strategic Management Society. Strategic Entrepreneurship Journal. 2026;1–30. wileyonlinelibrary.com/journal/sej 1 Managerial Summary: Entrepreneurs often need stake- holders to accept not only a proposed action but also a shared account of why that action can succeed under uncertainty. We develop a framework of logical reframing in which entrepreneurs use arguments to connect stakeholders' existing beliefs to a desired conclusion. Persuasion requires a complete logical route to that conclusion, a the- ory whose weakest premise is sufficiently strong and can overcome any additional contradictions activated by the argument. We show that what-if beliefs can prepare stake- holders to accept an argument but they can also generate resistance by connecting the argument to conflicting prior beliefs. Our framework helps entrepreneurs identify which assumptions require strengthening, which objections must be addressed, and when an alternative route to persuasion may be more effective. 1. How Strategic Leaders Drive Firms in Ecosystems: Envisioning Value, Orchestrating Knowledge, and Shifting Roles

Authors: Paolo Aversa, Carmelo Cennamo, Ambra Mazzelli, Gianni Lorenzoni
DOI: 10.1111/joms.70161
Published: 2026-10-09

Keywords: ecosystems, experience, knowledge orchestration, motorsport, theory of value

Fields & Theories:

- **Fields:** Strategic Management, Innovation Ecosystems, Strategic Leadership
- **Theories:** Theory of Value, Knowledge Orchestration, Process Theory

Abstract:

Research on business ecosystems has illuminated how ecosystems emerge, evolve, and transform, revealing ecosystem-level dynamics and the central actors that orchestrate them. Yet, it is individual firms that continuously attempt to establish and shift the roles they play within ecosystems through the vision and choices of their strategic leaders. How do strategic leaders drive these shifts? Through a longitudinal case study of Dallara Automobili (1972–2025), we trace how the CEO's prior professional experience shaped an evolving theory of value –a set of conjectures about how value should be created that guided the development of organizational routines enabling progressively more expansive knowledge orchestration. This process shifted Dallara from a peripheral component supplier to a boundary-spanning knowledge orchestrator. Our recursive process model theorizes how the leader's conjectures drive firm role shifts within an ecosystem: experience shapes the leader's theory of value, which drives organizational routines and knowledge orchestration; knowledge orchestration, in turn, redefines the firm's ecosystem role. Ecosystem responses then feed back, augmenting prior experience and, in turn, refining the theory of value so that each round operates at a broader scope. We contribute to ecosystem research by identifying knowledge orchestration as the mechanism through which a leader's theory of value translates into shifts in the firm's role and by showing how this process unfolds recursively as ecosystem responses reshape the leader's conjectures.

3. Revitalizing Leadership Research: Three Directions

Authors: Corinne Post
DOI: 10.1111/joms.70157
Published: 2026-10-06

Keywords: behavioral, leadership, theory

Fields & Theories:

- **Fields:** Organizational Behavior, Leadership Studies
- **Theories:** Relationship-based Leadership, Theory-based View of Leadership, Many-valued Logic

Abstract:

The contributions in this Point-Counterpoint present divergent directions for revitalizing research on leadership. All three pieces express concerns with the current state of behavioral leadership research but place varying weight on those problems. How the three contributions define the most pressing issues with this literature and how they conceive of leadership itself leads to distinct agendas for the future of leadership studies: leadership as relationships in action, a theory-based view of leadership, and a many-valued logic approach. The introduction to this collection summarizes these perspectives, highlights where they converge and diverge, and considers their implications for the future of leadership scholarship. It concludes that leadership research is unlikely to advance by converging on a single paradigm. Rather, advances will more likely come from dialogue and debate, just like that occurring among the contributions to this Point-Counterpoint.

Fields & Theories:

- **Fields:** International Business, Corporate Finance, Institutional Economics
- **Theories:** Property Rights Theory, Agency Theory, Incomplete Contracts Theory

Abstract:

Property rights theory (PRT) focuses on how allocation of residual control rights of ownership resolves incentive problems from incomplete contracts. However, when asset ownership is efficient for a transacting party, PRT ignores financial resource constraints preventing the party from purchasing it. We include creditors, who provide financial resources but are exposed to agency conflicts with equity-owners, in property rights analysis. Multinational enterprises (MNEs) reduce agency conflict with creditors through contractual covenants and collateral. Yet contracts are incomplete. Under incomplete contracts, how do MNEs mitigate financing risk, the risk that supply of capital from creditors is delayed or entirely unavailable? We distinguish between incomplete contracts arising from weak property rights institutions and weak contracting institutions. We theorize that allocation of specified control rights through operating and maintenance (O&M) contracts to MNE-owners mitigates financing risk in countries with weak property rights institutions because MNE-owners possess high-powered incentives to exert requisite effort to adapt operations to unexpected contingencies. In contrast, such allocation of O&M contracts to MNE-owners increases financing risk in countries with weak contracting institutions because such allocation increases agency conflict between MNE-owners and creditors. Empirical analyses of 363 project-financed investments in 52 countries worth US$1.53 trillion over 1990–2018 support our theory.

5. How Brokers Enable Collective Identity Formation in Fragmented Industry Groups: The Case of Franciacorta Wineries

Authors: Alessandra Zamparini, Ileana Stigliani, Kevin G. Corley
DOI: 10.1111/joms.70172
Published: 2026-10-04

Keywords: brokers, collective identity, identity formation, qualitative/grounded theory, wine

Fields & Theories:

- **Fields:** Organizational Theory, Strategic Management, Entrepreneurship
- **Theories:** Brokerage, Collective Identity, Social Network Theory

Abstract:

This study illuminates the role of brokers, that is, actors spanning inter-organizational boundaries, in the process of collective identity formation in fragmented industry groups. Through an in-depth longitudinal analysis of the Franciacorta wineries from the 1960s to the 1990s, we uncover how technical consultants acting as brokers facilitated collective identity formation by interacting with wineries through three mechanisms: translation, cross-pollination, and integration. Our grounded model of collective identity formation reveals a distributed and co-creative pathway to cohesive identity understandings built from the interstices of fragmented industry groups, through the co-creation of practices, the weaving of social connections, and the facilitation of an optimally distinctive collective identity via inward adaptation and outward alignment between broader industry domains and local contexts. Our study advances theory by foregrounding the more inconspicuous practice-level and social work that precedes, and ultimately determines the success of, the more visible identity-defining moments that happen via symbolic representation or institutional codification.

6. Reframing Bricolage as a Way of Inhabiting the World: Beyond Scarcity and Innovation with Lévi-Strauss

Authors: Raffi Duymedjian, Frank Janssen, Sophie Bacq, Guillaume Ferrante
DOI: 10.1111/joms.70168
Published: 2026-09-30

Keywords: Bricolage, bricoleur, entrepreneurial bricolage, entrepreneurship, Lévi-Strauss, management studies

Fields & Theories:

- **Fields:** Entrepreneurship, Management Theory, Organizational Sociology
- **Theories:** Bricolage, Structuralism, Resourcefulness

Abstract:

This paper reframes the concept of bricolage by returning to its foundational roots in Claude Lévi-Strauss's seminal 1962 work, The Savage Mind . By conducting a systematic review of entrepreneurial bricolage, which represents more than two thirds of management research on bricolage, alongside a close reading of Lévi-Strauss, we uncover three core divergences regarding contexts, process, and outcomes. Although contemporary literature typically frames bricolage as an innovation-driven response to resource scarcity, the original anthropological text conceptualized it as an experiential way of inhabiting the world aimed at preserving social structures. To bridge this theoretical gap, we construct a six-dimensional model of Lévi-Straussian bricolage that integrates sensory perception, intimate knowledge, perceived abundance, relational composition, mutual help, and system preservation. Returning to the Lévi-Straussian perspective broadens our understanding of bricolage from a tactical method for resource mobilization to a relational and experiential way of inhabiting the world, emphasizing maintenance, preservation, and creative construction alongside innovation. Finally, our proposed research agenda illustrates how this foundational reframing expands theoretical boundaries for both entrepreneurship and management scholarship, opening new avenues for studying resourcefulness as embodied perception, organizing as relational composition, and entrepreneurial and managerial action as care for resilient and enduring worlds.

7. Reframing Top-Down and Bottom-Up Dynamics in Sustainability Research: A Multilevel Framework for OB/HRM Scholars

Authors: Chidiebere Ogbonnaya, Tiffany Trzebiatowski, Hannes Leroy
DOI: 10.1111/joms.70169
Published: 2026-09-30

Keywords: multilevel processes, people management practices, sustainability, top-down and bottom-up dynamics

Fields & Theories:

- **Fields:** Organizational Behavior, Human Resource Management, Sustainability
- **Theories:** Multilevel Theory, Stakeholder Theory

Abstract:

Sustainability has emerged as an important priority for organizations navigating social, economic, and environmental uncertainty. We define sustainability as the ongoing process through which organizations balance objectives across these three domains while creating long-term value for current and future stakeholders. Yet much of the existing research continues to focus on macro-level considerations such as organizational commitments to corporate social responsibility (CSR) and environmental, social, and governance (ESG) ini-

tiatives and pays less attention to the experiences of people within organizations. This editorial introduces a thematic collection that advances a multilevel, person-centred perspective on how macro-, meso-, and micro-level organizational dynamics interact to shape sustainability. Drawing on selected articles published in the Journal of Management Studies between 2010 and 2026, the collection identifies four research clusters that demonstrate how formal sustainability commitments are shaped by social processes and individual experiences across organizational levels. Together, these articles underscore the central role of people management processes in explaining how and why sustainability goals are translated into organizational action. We conclude by outlining directions for future research that examines sustainability as a multilevel process shaped by the interaction between top-down and bottom-up dynamics.

1. Transaction Hazards Through Ideological Filters: How CEO Political Ideology Influences Vertical Integration Decisions

Authors: Holly Loncarich, Mirzokhidjon Abdurakhmonov, Madison L. Schnacker
DOI: 10.1177/01492063261487117
Published: 2026-10-08

Fields & Theories:

- **Fields:** Strategic Management, Corporate Governance, Strategic Leadership
- **Theories:** Transaction Cost Theory, Upper Echelons Theory, Political Ideology

Abstract:

Why do firms facing similar transaction environments adopt different boundary structures? Transaction cost theory (TCT) predicts governance choices based on transaction hazards, but persistent heterogeneity in vertical integration suggests that such efficiency-based explanations are incomplete. We examine whether CEO political ideology is associated with systematic variation in firm boundary decisions. Drawing on research on political ideology and strategic leadership, we argue that ideological orientations shape how executives evaluate and prioritize governance trade-offs. Using a panel of 1,198 U.S. public firms from 2001 to 2020 and a firm fixed-effects design exploiting CEO successions, we find that firms led by more conservative CEOs exhibit higher levels of vertical integration. This relationship weakens when asset speci ficity is high and when industries are more concentrated but is not amplified by demand volatil ity. Our findings suggest that firm boundaries reflect not only transaction conditions but also systematic differences in executive decision-making.

2. To Settle or Not to Settle: Defending Firm Reputation in Litigation Response

Authors: Fei Li, He Gao, Qi Zhu, Matthew Semadeni
DOI: 10.1177/01492063261487124
Published: 2026-10-01

Fields & Theories:

- **Fields:** Strategic Management, Innovation Management, Non-market Strategy
- **Theories:** Reputation Theory, Social Evaluations, Stakeholder Theory

Abstract:

Litigation can pose significant threats to a firm’ s competitive advantage, requiring firms to respond strategically, particularly in deciding whether to settle. While prior research on litiga tion responses has primarily emphasized legal and economic drivers, it has paid limited atten tion to reputational considerations, offering

an incomplete account of settlement decisions. Drawing on the theoretical mechanism of stakeholders' situational expectations of the firm, we propose and show that a firm' s reputation for innovation is associated with a lower likelihood of settlement in patent litigation. We further find that this relationship is contingent on industrylevel innovation intensity and plaintiff type. By examining how reputation shapes litigation responses, we make several important contributions to research on reputation and litigation. Keywords: reputation; social evaluations and litigation; innovation; response strategy Acknowledgments: We are deeply grateful to Wei Shi, associate editor at the Journal of Management, and to the two anonymous reviewers for their thoughtful guidance, constructive feedback, and valuable suggestions that have significantly strengthened this manuscript. We also thank Jon Bundy, Albert Cannella, Don Lange, Metin Sengul, and Mike Withers, for their helpful suggestions on earlier versions of this article. We acknowledge the helpful com ments we received at the 83rd Academy of Management Annual Conference. Supplemental material for this article is available with the manuscript on the JOM website. 1. Organizational Zemblanity: How Organizational Learning Can Reinforce Rigidity, Error, and Misalignment

Authors: Marco Balzano, Christian Busch, Thomas Roulet
DOI: 10.5465/annals.2025.0203
Published: 2026-10-12

Fields & Theories:

- **Fields:** Organizational Theory, Strategic Management, Organizational Learning
- **Theories:** Organizational Learning Theory, Organizational Zemblanity

Abstract:

Organizational learning can help organizations improve and adapt, but it can also reinforce error and misalignment. These negative outcomes are often interpreted as implementation problems or as signs of incomplete learning. We instead examine the possibility that dysfunction can arise from learning processes themselves, even when those processes operate as intended. We review 290 articles to identify recurring assumptions in the literature and the conditions under which they do not hold. We then identify three mechanisms that can turn learning systems into sources of rigidity and misalignment, and conceptualize the self-reinforcing trajectory produced by their interaction as learning-based organizational zemblanity. Our review shows how organizational learning can generate both adaptive and dysfunctional trajectories and outlines a research agenda on identifying and interrupting negative learning trajectories.

2. Moving Toward, Moving Away, or Stuck in Conceptual Limbo? Rethinking Approach, Avoidance, and Inhibition in Organizational Research

Authors: Elad N. Sherf, Min Young Lee, Terence McElroy
DOI: 10.5465/annals.2025.0064
Published: 2026-10-01

Fields & Theories:

- **Fields:** Organizational Behavior, Psychology in Management
- **Theories:** Approach-Avoidance Framework, Reinforcement Sensitivity Theory

Abstract:

Understanding when employees move toward opportunities, away from threats, or pause to balance competing concerns is central for predicting workplace behavior. Organizational scholars routinely apply approach–avoidance logic to explain psychological constructs (e.g., motivation, goals, emotions), behaviors, and performance outcomes. Systematically reviewing 268 papers that apply such logic, we document three usages, from classifying single constructs to organizing entire domains. Across these usages, scholars draw primarily on two foundational approach–avoidance models with distinct foci, often treating them interchangeably. Integrating the two foundational models, we clarify the distinct affective, cognitive, and behavioral constructs related to the approach and avoidance systems as well as a distinct, often-overlooked inhibition system. We identify three meta-concerns where the field' s application is misaligned with what the integration of the foundational models specifies: (1) key constructs are confounded, (2) inhibition responses to goal conflict are omitted or misclassified as avoidance, and (3) approach responses are implicitly treated as functional whereas avoidance and inhibition responses are treated as dysfunctional. Applying the shared vocabulary and resulting integrative model to three exemplar research streams (power, voice and silence, and proactivity), we discuss alternative explanations for empirical inconsistencies and offer diagnostic tools for more precise organizational theorizing.

3. Awe as a Transformative Emotion: An Integrative Review, Metamorphosis Model, and Research Agenda

Authors: Jack McGuire, Shane Schweitzer, Jochen I. Menges, David De Cremer
DOI: 10.5465/annals.2025.0105
Published: 2026-10-01

Fields & Theories:

- **Fields:** Organizational Behavior, Leadership, Innovation Management
- **Theories:** Metamorphosis Model of Awe, Sensemaking

Abstract:

Awe has attracted substantial scholarly attention, but its implications for management remains fragmented across different accounts of what awe is and why it matters. In this review, we first show that the literature has developed around three dominant perspectives—collective self, epistemic, and well-being—each of which offers a distinct account of awe' s primary function. To integrate these perspectives, we advance a metamorphosis model of awe, which explains how awe first breaks down self- and nonself-schemata before building them back up again, producing an expansion of mind and self. We then organize the diverse elicitors of awe into cognitive, physical, social, and technological sources, clarifying the conditions under which awe is likely to arise. Through this model, we portray awe as a transformative emotion that influences identity, cognition, and behavior, with implications for core organizational processes such as leadership, work design, organizational change, sensemaking, and innovation. We conclude by charting a forward-looking research agenda calling for greater examination of awe' s role at the individual, team, and organizational levels.

4. Intergenerational Transmission

Authors: Trevor Israelsen, Innan Sasaki, Nadia Maamoun
DOI: 10.5465/annals.2025.0072
Published: 2026-09-29

Fields & Theories:

- **Fields:** Organizational Theory, Strategic Management, Management History, Organizational Sociology
- **Theories:** Sociotemporal Transcendence, Institutional Theory, Organizational Continuity, Evolutionary Theory

Abstract:

There has been recent and rapid growth in management and organizational research dedicated to the phenomenon of intergenerational transmission—the process through which organizations and other social systems reproduce and reconstitute themselves across long periods of time. This growth has resulted in several different research communities dedicated to understanding how organizational life transcends the involvement, tenure, and lifetimes of individuals. Yet, while assumptions about the nature of intergenerational transmission processes are coherent within research communities, such assumptions also diverge widely across such communities, resulting in contradictions and conceptual challenges. In this manuscript we identify four latent conceptualizations of the process of intergenerational transmission: taken-for-granted persistence, effortful maintenance, incremental adaptation, and discontinuous reinvention. We theorize that these processes represent different modes of what we term sociotemporal transcendence—different ways through which organizational life extends through time beyond the involvement or lifetimes of individuals. Based on these insights, we identify future research directions for a transcendence-based view of organizational life.
