## 1. Depositing Corporate Payout

---

### 公司派息的存款化

**Authors / 作者:** Leming Lin

**DOI:** [10.1017/s0022109026102646](https://doi.org/10.1017/s0022109026102646)

### Fields & Theories / 领域与理论:

- **Fields:** Corporate Finance, Financial Intermediation, Banking
- **领域:** 公司金融, 金融中介, 银行业
- **Theories:** Capital Allocation, Intermediation Channel
- **理论:** 资本配置, 中介渠道

### Abstract / 摘要:

This article studies the flow of payout funds in the financial system. Using various data sources and empirical strategies, it provides evidence that a significant portion of payouts enters the banking sector as deposits, which are then intermediated to bank borrowers. The findings highlight an important channel through which corporate payout policies shape capital allocation in the economy and suggest that policies aimed at restricting payouts may distort this process by limiting the flow of funds from large and profitable corporations to small, bank-dependent firms and households.

本文研究了金融体系中派息资金的流向。利用多种数据源和实证策略，本文提供的证据表明，很大一部分派息以存款的形式进入银行部门，随后被中介给银行借款人。研究结果强调了一个重要的渠道，即公司派息政策通过该渠道塑造经济中的资本配置，并表明旨在限制派息的政策可能会通过限制资金从大型盈利公司流向小型、依赖银行的企业和家庭，从而扭曲这一过程。

- **领域:** 资产定价, 行为金融学, 投资管理
- **Theories:** Investment CAPM, Efficient Market Hypothesis, Behavioral Bias
- **理论:** 投资资本资产定价模型, 有效市场假说, 行为偏差

### Abstract / 摘要:

We introduce the implied value premium ( IVP ), the difference between the implied costs of capital of value and growth stocks, to predict time variation in the ex post value premium. During 1977–2023, IVP is the strongest predictor of the ex post value premium. It also predicts the investment premium, consistent with the Investment CAPM. However, IVP ' s ability to predict the difference in cumulative abnormal returns around quarterly earnings announcements of value and growth stocks suggests that mispricing may also play a role. Overall, our results suggest that recent value underperformance reflects cyclical variation rather than a permanent shift.

我们引入了隐含价值溢价 (IVP)，即价值股与成长股隐含资本成本之差，用以预测事后价值溢价的时间变化。在 1977–2023 年期间，IVP 是事后价值溢价最强的预测因子。它还能预测投资溢价，这与投资资本资产定价模型 (Investment CAPM) 相一致。然而，IVP 预测价值股和成长股在季度盈余公告前后的累计异常收益率差异的能力表明，定价错误可能也发挥了作用。总体而言，我们的结果表明，近期价值股表现不佳反映的是周期性波动，而非永久性转变。

### 3. A Shared Interest: Do Bonds Strengthen Equity Monitoring?

---

共同利益：债券是否加强了股权监督？

**Authors / 作者:** Todd A. Gormley, Manish Jha

**DOI:** [10.1017/s002210902610266x](https://doi.org/10.1017/s002210902610266x)

**Fields & Theories / 领域与理论:**

- **Fields:** Corporate Finance, Asset Management, Financial Intermediation
- **领域:** 公司金融, 资产管理, 金融中介
- **Theories:** Agency Theory, Stewardship, Monitoring
- **理论:** 代理理论, 尽责管理, 监督

**Abstract / 摘要:**

Institutional investors conduct more governance research and are less likely to follow proxy advisor vote recommendations when a company's bonds comprise a larger share of their assets. These findings are driven by bond holdings, shareholder proposals, and companies where fixed-income managers are more likely to be attentive and share an interest with equity investors in improving governance. The findings do not concentrate on companies or shareholder proposals where creditor-shareholder conflicts are likely. Overall, the findings suggest that corporate bond holdings influence how actively institutions monitor their equity positions and contribute to institutions' overall incentive to be engaged stewards.

当一家公司的债券在机构投资者的资产中占比较大时，这些投资者会进行更多的治理研究，并且不太可能遵循投票代理机构的投票建议。这些发现是由债券持有量、股东提案以及固定收益经理更有可能保持关注并与股权投资者在改善治理方面拥有共同利益的公司所驱动的。研究结果并未集中在可能存在债权人-股东冲突的公司或股东提案上。总体而言，研究结果表明，公司债券持有量影响了机构对其股权头寸的监督积极程度，并有助于提高机构作为积极尽责管理者的整体动力。

### 4. Dr Jekyll and Mr Hyde: Feedback and Welfare When Hedgers Can Acquire Information

---

杰基尔博士与海德先生：当套期保值者可以获取信息时的反馈与福利

**Authors / 作者:** Jacques Olivier

**DOI:** [10.1017/s0022109026102671](https://doi.org/10.1017/s0022109026102671)

**Fields & Theories / 领域与理论:**

- **Fields:** Market Microstructure, Financial Regulation, Information Asymmetry
- **领域:** 市场微观结构, 金融监管, 信息不对称
- **Theories:** Feedback Effects, Strategic Complementarities, Endogenous Information Acquisition, General Equilibrium
- **理论:** 反馈效应, 策略互补性, 内生信息获取, 一般均衡

**Abstract / 摘要:**

I ask whether hedgers who speculate should be regulated differently from other speculators in a model where information acquisition is endogenous, and information has real effects. Hedging benefits and feedback effects generate strategic complementarities between market-maker, firm manager, and trader, which causes multiple equilibria. Gains from trade are lower when hedgers acquire information, while speculators may produce less information than socially desirable. A "Volcker rule" separating hedging and speculative activities may help select the higher welfare equilibrium. When too little information is produced, contracts whereby a firm subsidizes losses of designated market-makers (DMM) to make prices more informative increase welfare.

我在一个信息获取是内生的且信息具有实际影响的模型中，探讨了对参与投机的套期保值者是否应采取与普通投机者不同的监管方式。套期保值收益和反馈效应在做市商、企业管理者和交易者之间产生了策略互补性，从而导致了多重均衡。当套期保值者获取信息时，贸易收益较低，而投机者产生的信息可能少于社会最优水平。将套期保值与投机活动分开的“沃尔克规则”可能有助于选择福利较高的均衡。当产生的信息太少时，由企业补贴指定做市商（DMM）损失以提高价格信息含量的合同可以增加福利。

## 5. Does General Solicitation Improve Access to Equity Capital for Small Businesses? Evidence from the JOBS Act

---

公开劝诱是否改善了小企业的股权资本获取？来自《JOBS 法案》的证据

**Authors / 作者:** Anup Agrawal, Yuree Lim

**DOI:** [10.1017/s0022109025102470](https://doi.org/10.1017/s0022109025102470)

**Fields & Theories / 领域与理论:**

- **Fields:** Corporate Finance, Entrepreneurial Finance, Venture Capital, Financial Regulation
- **领域:** 公司金融, 创业金融, 风险投资, 金融监管
- **Theories:** Selection Bias, Information Asymmetry, Agency Theory
- **理论:** 选择偏差, 信息不对称, 代理理论

**Abstract / 摘要:**

Under Title II of the Jumpstart Our Business Startups Act, firms can sell private placement securities to the public via general solicitation (GS) or privately (non-GS). We find that equity offerings under GS tend to be riskier than under non-GS. After accounting for selection, GS issuers are less likely to succeed in i) raising capital, ii) getting venture capital (VC) funding, and iii) exiting via IPO or mergers and acquisitions, and incur substantial brokerage costs for advertising and verifying investor accreditation. However, GS appears to help new entrants and offerings that use registered brokers. The success of Form D financing improves future VC financing and exit outcomes.

根据《初创企业推动法案》(JOBS Act) 第二章，公司可以通过公开劝诱 (GS) 或私募 (非 GS) 向公众出售私募证券。我们发现，GS 下的股权发行往往比非 GS 下的风险更高。在考虑了选择性因素后，GS 发行人在以下方面成功的可能性较低：i) 筹集资金，ii) 获得风险投资 (VC) 融资，以及 iii) 通过 IPO 或并购退出，并且在广告和验证投资者合格身份方面承担了大量的经纪成本。然而，GS 似乎有助于新进入者和使用注册经纪人的发行。D 表格 (Form D) 融资的成功改善了未来的 VC 融资和退出结果。

## 6. Investment Functions with $q$ in the Presence of Unobserved Persistent Shocks

---

存在不可观测持续冲击时的  $q$  投资函数

**Authors / 作者:** Kyoo il Kim, Suyong Song, Jiawei (Brooke) Wang

**DOI:** [10.1017/s0022109026102695](https://doi.org/10.1017/s0022109026102695)

**Fields & Theories / 领域与理论:**

- **Fields:** Corporate Finance, Asset Pricing
- **领域:** 公司金融, 资产定价
- **Theories:**  $q$ -Theory of Investment, Measurement Error, Rational Expectations
- **理论:** 投资的  $q$  理论, 测量误差, 理性预期

**Abstract / 摘要:**

We study the classical relationship between a firm's investment and  $q$ , for which an unobserved persistent shock is an important factor in the investment decision. In our setting, besides the potential measurement

problem of  $q$ , controlling for the unobserved shock becomes a new challenge. We develop an estimation method that addresses both econometric issues given timing and information set assumptions. Using 16,256 unique public firms in the United States from 1975 to 2021, we find that  $q$  remains a significant factor of investment even after controlling for the unobserved shock and measurement error.

我们研究了企业投资与  $q$  之间的经典关系，其中不可观测的持续冲击是投资决策中的一个重要因素。在我们的设定中，除了  $q$  潜在的测量问题外，控制不可观测冲击成为了一个新的挑战。我们开发了一种估计方法，在给定时间安排和信息集假设的情况下，同时解决这两个计量经济学问题。通过使用 1975 年至 2021 年间美国的 16,256 家独特上市公司，我们发现即使在控制了不可观测冲击和测量误差之后， $q$  仍然是投资的一个显著因素。

## 7. Expected and Realized Returns on Volatility

---

### 波动率的预期收益与实现收益

**Authors / 作者:** Guanglian Hu, Kris Jacobs

**DOI:** [10.1017/s0022109026102683](https://doi.org/10.1017/s0022109026102683)

**Fields & Theories / 领域与理论:**

- **Fields:** Asset Pricing, Derivatives
- **领域:** 资产定价, 衍生品
- **Theories:** Volatility Risk Premium, Efficient Market Hypothesis, Risk-Return Trade-off
- **理论:** 波动率风险溢价, 有效市场假说, 风险-收益权衡

**Abstract / 摘要:**

Expected returns on market volatility, which can be obtained from VIX futures prices in closed form using standard models, positively predict subsequent realized volatility returns. Volatility returns are negative on average. Following increases in volatility, expected volatility returns and subsequent realized volatility returns become more negative. Because realized volatility returns are negatively correlated with index returns, expected volatility returns also negatively predict S&P 500 index returns, but these results are less significant. The results are robust to a wide range of variations in the empirical setup and to small-sample biases.

市场波动率的预期收益（可以使用标准模型从 VIX 期货价格中以闭式解形式获得）正向预测随后的实现波动率收益。波动率收益平均为负。随着波动率的增加，预期波动率收益和随后的实现波动率收益变得更加负。由于实现波动率收益与指数收益负相关，预期波动率收益也负向预测标准普尔 500 指数收益，但这些结果的显著性较低。研究结果对于实证设置中的广泛变化以及小样本偏差具有稳健性。

Hu - Expected and Realized Returns on Volatility.pdf

## 8. Real Disinvestments and the Distress Anomaly: Evidence from Stocks, Bonds, and Loans

---

### 实物资产减持与困境异常：来自股票、债券和贷款的证据

**Authors / 作者:** Shuwen Yang, Kevin Aretz, Yafei Zhang

**DOI:** [10.1017/s0022109026102701](https://doi.org/10.1017/s0022109026102701)

**Fields & Theories / 领域与理论:**

- **Fields:** Asset Pricing, Corporate Finance, Credit Risk
- **领域:** 资产定价, 公司金融, 信用风险
- **Theories:** Real Options Theory, Agency Theory, Distress Anomaly
- **理论:** 实物期权理论, 代理理论, 困境异常

**Abstract / 摘要:**

We argue that firms' ability to disinvest real assets helps rationalize the negative distress premiums in

stocks, bonds, and, as we show, loans and firm assets. Using a real options model in which shareholders and debtholders share disinvestment proceeds, the model suggests that the stock (debt) distress premium becomes more negative with the proceeds paid out to that class, and that both premiums can be negative when debtholders receive most of the proceeds. Using hard-asset disinvestment-ability proxies, the stock (bond or loan) distress premium becomes less (more) negative with those proxies, possibly suggesting that shareholders benefit more strongly from nonsecured-asset disinvestments.

我们认为，企业减持实物资产的能力有助于解释股票、债券以及（如我们所示的）贷款和企业资产中存在的负困境溢价。通过使用股东和债权人分享减持收益的实物期权模型，该模型表明，随着支付给该类别的收益增加，股票（债务）困境溢价变得更加负向；而当债权人获得大部分收益时，两者的溢价都可能为负。利用硬资产减持能力的代理变量，股票（债券或贷款）困境溢价随这些代理变量变得更负向（更负向），这可能表明股东从非担保资产减持中获益更强。

Yang - Real Disinvestments and the Distress Anomaly Evidence from Stocks, Bonds, and Lo.pdf

## 9. Management Disclosure and Media Coverage

---

### 管理层披露与媒体报道

**Authors / 作者:** Hamid Boustanifar, Sasan Mansouri

**DOI:** [10.1017/s0022109026102634](https://doi.org/10.1017/s0022109026102634)

**Fields & Theories / 领域与理论:**

- **Fields:** Corporate Finance, Information Intermediaries, Behavioral Finance
- **领域:** 公司金融, 信息中介, 行为金融
- **Theories:** Information Asymmetry, Machine Learning, Supply-driven Media Coverage
- **理论:** 信息不对称, 机器学习, 供给驱动的媒体报道

**Abstract / 摘要:**

We examine how management disclosure affects media coverage by analyzing firms' responses in earnings call Q&A sessions. Using a machine-learning-based "non-answer" score, we find that evasive managerial responses reduce subsequent media attention, particularly from professional outlets generating original content. This supports a supply-driven view of media coverage: poor disclosure limits journalistic content creation. Reduced coverage, in turn, is associated with lower investor engagement and weaker stock performance. Our findings highlight the critical role of a firm's information environment in shaping the level and nature of subsequent media coverage, with implications for broader financial market outcomes.

我们通过分析企业在业绩说明会问答环节中的反应，考察了管理层披露如何影响媒体报道。利用基于机器学习的“不回答”评分，我们发现回避性的管理层回应会减少随后的媒体关注，尤其是来自产生原创内容的专业机构的关注。这支持了媒体报道的供给驱动观点：糟糕的披露限制了新闻内容的创作。反之，报道的减少与较低的投资者参与度和较弱的股票表现相关。我们的研究结果强调了企业信息环境在塑造后续媒体报道水平和性质方面的关键作用，并对更广泛的金融市场结果产生影响。

## 10. Silencing Pollution: The Environmental Consequences of Anti-SLAPP Laws

---

### 沉默污染：反战略诉讼 (Anti-SLAPP) 法律的环境后果

**Authors / 作者:** Xikai Chen, Jinjun (Ricky) Ke, Yu Flora Kuang

**DOI:** [10.1017/s0022109026102658](https://doi.org/10.1017/s0022109026102658)

**Fields & Theories / 领域与理论:**

- **Fields:** Corporate Finance, ESG/Sustainable Finance, Law and Finance
- **领域:** 公司金融, ESG/可持续金融, 法律与金融
- **Theories:** Difference-in-Differences, Stakeholder Theory, Agency Theory, Governance
- **理论:** 双重差分, 利益相关者理论, 代理理论, 治理

## Abstract / 摘要:

We examine whether free-speech protections influence corporate environmental performance. Using the staggered enactment of U.S. anti-SLAPP statutes in a stacked difference-in-differences design from 1990 to 2019, we find that these laws significantly reduce firms' toxic emissions without curbing economic activity. Anti-SLAPP enactments also promote environmental investment through green innovation, abatement spending, and waste reduction management, and strengthen governance via improved sustainability oversight, ESG-linked executive pay, employee training, and supply chain management. The effects are stronger when stakeholder monitoring is stronger and when managerial incentives embed sustainability goals. Overall, free-speech protections generate powerful environmental benefits.

我们考察了言论自由保护是否影响企业的环境表现。利用 1990 年至 2019 年美国反战略诉讼 (anti-SLAPP) 法规的交错颁布, 并采用堆叠双重差分 (stacked difference-in-differences) 设计, 我们发现这些法律在不抑制经济活动的情况下显著减少了企业的有毒排放。反战略诉讼法的颁布还通过绿色创新、减排支出和废物减少管理促进了环境投资, 并通过改进可持续发展监督、与 ESG 挂钩的高管薪酬、员工培训和供应链管理加强了治理。当利益相关者监督更强以及管理激励嵌入了可持续发展目标时, 这些效应更为显著。总体而言, 言论自由保护产生了强大的环境效益。

- **领域:** 家庭金融, 房地产金融, 人力资本
- **Theories:** Crowding-out Effect, Difference-in-Differences, Portfolio Choice, Speculative Bubbles
- **理论:** 挤出效应, 双重差分, 投资组合选择, 投机泡沫

## Abstract / 摘要:

Housing and human capital represent two major forms of household wealth. This article investigates the potential for housing speculation to crowd out household investment in children's education, an endeavor that only pays off in the long run. To address endogeneity concerns, we exploit the unintended spillover effect of staggered house purchase restrictions (HPR) in China. Using a difference-in-differences approach, we find that HPR reduce educational investment of households in nearby unregulated cities. We also provide evidence consistent with a housing speculation channel. These findings shed new light on the socioeconomic consequences of housing market booms.

住房和人力资本是家庭财富的两种主要形式。本文研究了住房投机挤出家庭对子女教育投资的可能性, 而教育投资是一项仅在长期内才有回报的活动。为了解决内生性问题, 我们利用了中国交错实施的住房限购政策 (HPR) 产生的意外溢出效应。通过双重差分法, 我们发现限购政策减少了邻近未受监管城市家庭的教育投资。我们还提供了与住房投机渠道一致的证据。这些发现为住房市场繁荣的社会经济后果提供了新的见解。

竞争执法与无形资本会计

**Authors / 作者:** JOHN D. KEPLER, CHARLES G. MCCLURE, CHRISTOPHER R. STEWART

DOI: [10.1111/jofi.70028](https://doi.org/10.1111/jofi.70028)

#### Fields & Theories / 领域与理论:

- **Fields:** Corporate Finance, Financial Regulation, Industrial Organization
- **领域:** 公司金融, 金融监管, 产业组织
- **Theories:** Market Power, Regulatory Arbitrage
- **理论:** 市场势力, 监管套利

#### Abstract / 摘要:

Antitrust laws mandate review of mergers and acquisitions (M&As) that exceed an asset size threshold based on accounting standards that exclude most intangible capital. We show that this exclusion leads to thousands of intangible-intensive M&As being nonreportable. Acquirers in nonreportable deals achieve higher equity values and price markups, especially when consolidating product markets. Furthermore, nonreportable pharmaceutical deals are three times more likely to involve overlapping drug projects, which are subsequently 40% more likely to be terminated. Our results suggest that the growth of intangible assets may exacerbate market power through nonreportable consolidation of the sectors most concerning for consumers.

反垄断法要求对超过资产规模阈值的并购 (M&As) 进行审查, 而该阈值基于排除大部分无形资本的会计标准。我们表明, 这种排除导致数千起无形资产密集型并购无需申报。在无需申报的交易中, 收购方获得了更高的权益价值和价格加成, 尤其是在整合产品市场时。此外, 在无需申报的医药交易中, 涉及重叠药物项目的可能性是其他交易的三倍, 而这些项目随后被终止的可能性高出 40%。我们的研究结果表明, 无形资产的增长可能会通过消费者最关注的行业中无需申报的整合, 从而加剧市场势力。

- **领域:** ESG/可持续金融, 公共财政, 资产定价
- **Theories:** Social Cost of Carbon, General Equilibrium
- **理论:** 碳的社会成本, 一般均衡

#### Abstract / 摘要:

Green finance—including environmental, social, and governance investing and sustainable finance regulations—is widespread, but can it substitute for carbon pricing in fighting climate change? In a unified model, I show that (i) when carbon prices reflect the social cost of carbon, green finance should not be used; (ii) when carbon prices are too low, green finance can implement the social optimum if each firm's cost of capital can be set to its sustainable discount rate, which increases with the ratio of carbon emissions to firm value. I provide calibrations, analyze stranded assets, and present implementations through subsidies or preferential financing for green firms.

绿色金融——包括环境、社会和治理 (ESG) 投资以及可持续金融监管——已广泛普及, 但它在应对气候变化方面能否替代碳定价? 在一个统一的模型中, 我证明了: (i) 当碳价格反映碳的社会成本时, 不应使用绿色金融; (ii) 当碳价格过低时, 如果每家公司的资本成本可以设定为其可持续贴现率, 绿色金融可以实现社会最优, 而该贴现率随碳排放量与公司价值之比的增加而增加。我提供了校准分析, 分析了搁浅资产, 并提出了通过补贴或对绿色企业提供优惠融资的实施方案。

- **领域:** 行为金融学, 资产定价, 家庭金融
- **Theories:** Realization Utility, Disposition Effect, Mental Accounting, Leverage Constraints
- **理论:** 实现效用, 处置效应, 心理账户, 杠杆约束

**Abstract / 摘要:**

An investor receives utility bursts from realizing gains and losses at the individual stock level and dynamically allocates his mental budget between risky and risk-free assets at the trading account level. Using savings, he reduces his stockholdings and is more willing to realize losses. Using leverage, he increases his stockholdings beyond his mental budget and is more reluctant to realize losses. While leverage strengthens the disposition effect, introducing leverage constraints mitigates it. Our model predicts that investors with stocks in deep losses sell them either immediately or after stocks rebound a little.

投资者从实现个股层面的收益和损失中获得效用爆发, 并在交易账户层面动态地在风险资产和无风险资产之间分配其心理预算。利用储蓄, 他会减少股票持仓并更愿意实现损失。利用杠杆, 他会将股票持仓增加到超过其心理预算的水平, 并且更不愿实现损失。虽然杠杆加强了处置效应, 但引入杠杆约束可以减轻这种效应。我们的模型预测, 持有深陷亏损股票的投资者要么立即卖出, 要么在股票小幅反弹后卖出。

- **Theories:** Information Asymmetry, Soft Information, Large Language Models, Informed Trading
- **理论:** 信息不对称, 软信息, 大语言模型, 知情交易

**Abstract / 摘要:**

We use large language models to analyze the content of 4,700 private meetings between a large active asset manager and its portfolio firms. The high-level meetings convey mostly soft information about the firm, and little about industry or market. Fund manager meetings focus on business models and financial metrics, while governance specialist meetings focus on environmental, social, and governance risks; 0.4% of meetings discuss material nonpublic information. Trades by fund managers increase with meetings attended by senior management, rated as unusually good or bad, where the tone is significantly positive or negative, or assessed as creating consensus. Meeting-informed portfolios can generate significant outperformance.

我们使用大语言模型分析了一家大型活跃资产管理公司与其投资组合公司之间的 4,700 场私下会议的内容。这些高层会议主要传达关于公司的软信息, 而很少涉及行业或市场。基金经理会议侧重于商业模式和财务指标, 而治理专家会议则侧重于环境、社会和治理风险; 0.4% 的会议讨论了重大的非公开信息。基金经理的交易随着高级管理层出席、被评为异常好或坏、语气显著积极或消极、或被评估为达成一致的会议而增加。基于会议信息的投资组合可以产生显著的超额收益。

- **Theories:** Bank Runs, Moral Hazard, Public Goods Theory, Insolvency vs Illiquidity
- **理论:** 银行挤兑, 道德风险, 公共物品理论, 资不抵债 vs 流动性不足

#### **Abstract / 摘要:**

Cyber risk exposes banks to operational disruptions that can trigger runs. A bank chooses its cybersecurity by trading off protection against attacks with remaining resilient if an attack succeeds. Cybersecurity functions as a risk-management decision: it reduces the bank's exposure to adverse outcomes but entails lower balance-sheet returns. Equilibrium cybersecurity depends on whether failure is driven by insolvency or illiquidity. When failure is insolvency-driven, bank and creditor actions reinforce one another: greater cybersecurity leads to a higher debt burden, which strengthens incentives for protection. When failure is illiquidity-driven, additional cybersecurity lowers the debt burden, eliminating the bank's private risk-return trade-off. Socially optimal cybersecurity differs from the private choice, and corrective instruments must target either the protection or resilience margins. We extend the model to a system-wide environment in which cybersecurity is a public good, highlighting free-riding and the need for targeted regulation.

网络风险使银行面临可能引发挤兑的业务中断。银行通过在防御攻击与攻击成功后保持韧性之间进行权衡来选择其网络安全水平。网络安全具有风险管理决策的功能：它减少了银行面临不利结果的风险，但会导致较低的资产负债表收益。均衡的网络安全水平取决于失败是由资不抵债还是流动性不足驱动的。当失败由资不抵债驱动时，银行和债权人的行为会相互强化：更高的网络安全导致更高的债务负担，从而增强了防御动机。当失败由流动性不足驱动时，额外的网络安全会降低债务负担，消除了银行私人的风险-收益权衡。社会最优的网络安全水平与私人选择不同，纠正性工具必须针对防御或韧性边际。我们将模型扩展到网络安全作为公共物品的系统性环境中，强调了搭便车行为和有针对性监管的必要性。

- **领域:** 金融中介, 市场微观结构, 货币政策, 回购市场
- **Theories:** Collateral Multiplier, Quasi-natural Experiment, Supply Elasticity, Market Liquidity
- **理论:** 抵押品乘数, 准自然实验, 供给弹性, 市场流动性

#### **Abstract / 摘要:**

We utilize the Eurosystem securities lending facilities as a laboratory to investigate the impact of collateral scarcity on market functioning. The reduction of securities lending fees, implemented in November 2020, provides a quasi-natural experiment for our analyses. This policy change results in a surge in the utilization of securities lending facilities, particularly for bonds with limited supply elasticity in the repo market. We find no evidence of substitution effects; instead, the overall activity in the repo market expands through the collateral multiplier. The improved pricing conditions alleviate collateral scarcity and enhance market quality.

in both the repo and cash markets.

我们利用欧元系统证券借贷便利作为实验室，调查抵押品稀缺对市场功能的影响。2020 年 11 月实施的证券借贷费率降低为我们的分析提供了一个准自然实验。这一政策变化导致证券借贷便利的利用率激增，特别是对于回购市场中供给弹性有限的债券。我们没有发现替代效应的证据；相反，回购市场的整体活动通过抵押品乘数效应而扩张。定价条件的改善缓解了抵押品稀缺，并提高了回购市场和现货市场的市场质量。

### 1. The Present Value of Future Market Power

---

未来市场势力的现值

**Authors / 作者:** Thummim Cho, Marco Grotteria, Lukas Kremens, Howard Kung

**DOI:** [10.1093/rfs/hhaf112](https://doi.org/10.1093/rfs/hhaf112)

**Fields & Theories / 领域与理论:**

- **Fields:** Asset Pricing, Industrial Organization, Macro-Finance
- **领域:** 资产定价, 产业组织, 宏观金融
- **Theories:** Present Value Identity, Market Power, Intangible Capital
- **理论:** 现值恒等式, 市场势力, 无形资产

**Abstract / 摘要:**

We introduce a present-value identity relating a firm's market value to expected future markups, output growth, discount rates, and investments. Distinguishing current from expected markups reveals five empirical facts: (1) Expected markups account for half the rise in U.S. firm values since 1980. (2) The rise in aggregate expected markups reflects market-share reallocation toward high-expected-markup firms and within-firm increases. (3) Expected markups are linked to intangible investments. (4) They relate negatively to discount rates over time but (5) positively to abnormal returns across firms. Finally, variation in long-term expected markups is primarily associated with asset prices rather than current markups.

我们引入了一个现值恒等式，将企业的市场价值与预期的未来加成率、产出增长、贴现率和投资联系起来。通过区分当前加成率与预期加成率，揭示了五个经验事实：(1) 自 1980 年以来，预期加成率解释了美国企业价值增长的一半。(2) 总预期加成率的上升反映了市场份额向高预期加成率企业的重新配置以及企业内部的增长。(3) 预期加成率与无形资产投资相关。(4) 随时间推移，它们与贴现率呈负相关，但 (5) 在不同企业间与异常收益呈正相关。最后，长期预期加成率的变化主要与资产价格相关，而非当前加成率。

- **领域:** 家庭金融, 房地产金融, 行为金融
- **Theories:** Auction Theory, Behavioral Bias, Natural Experiment
- **理论:** 拍卖理论, 行为偏差, 自然实验

**Abstract / 摘要:**

We study the effects of underquoting, the practice of setting listing prices below sellers' reservation values, on housing auctions. Laws introduced in Australia to deter underquoting lead to higher listing prices, but also to declines in sales prices and sales probabilities. We develop a quantitative model to formalize predictions under different assumptions about bidders' information and rationality. The effects of the laws are matched by a version of the model in which participating bidders overbid. While both behavioral biases arising during the auction and switching costs can explain overbidding, empirical and survey evidence points to behavioral biases as the main mechanism.

我们研究了低报挂牌价（即设定低于卖方保留价值的挂牌价格的做法）对住房拍卖的影响。澳大利亚为遏制低报挂牌价而引入的法律导致了挂牌价格的上升，但也导致了成交价格 and 成交概率的下降。我们开发了一个定量模型，在关于竞买人信息和理性的不同假设下使预测形式化。该模型的一个版本（其中参与竞买的人过度出价）与法律的影响相匹配。虽然拍卖过程中产生的行为偏差和转换成本都可以解释过度出价，但经验和调查证据表明，行为偏差是主要的机制。

- **领域:** 市场微观结构, 金融中介, 金融科技
- **Theories:** Adverse Selection, Reinforcement Learning, Competition Theory
- **理论:** 逆向选择, 强化学习, 竞争理论

**Abstract / 摘要:**

We study "Algorithmic Market Makers" (AMs) that use Q-learning algorithms to set prices for a risky asset. We find that while AMs successfully adapt to adverse selection, they struggle to learn competitive pricing strategies. This failure is driven by limited experimentation and noisy feedback regarding the profitability of undercutting a competitor. Consequently, an increase in AMs' profit volatility tends to result in less competitive market outcomes. These features leave identifiable patterns: for example, AMs earn higher rents in the absence of adverse selection, and their bid-ask spreads respond asymmetrically to symmetric shocks to their costs.

我们研究了使用 Q 学习算法为风险资产定价的“算法做市商” (AMs)。我们发现，虽然算法做市商成功适应了逆向选择，但它们难以学会竞争性定价策略。这种失败是由有限的尝试以及关于削减竞争对手价格获利能力的噪声反馈所驱动的。因此，算法做市商利润波动性的增加往往会导致竞争性较低的市场结果。这些特征留下了可识别的模式：例如，在不存在逆向选择的情况下，算法做市商赚取更高的租金，并且其买卖价差对成本的对称冲击表现出非对称反应。

Colliard - Algorithmic Pricing and Liquidity in Securities Markets.pdf

### 4. Financial Intermediaries and the Yield Curve

---

金融中介与收益率曲线

**Authors / 作者:** Andrés Schneider

**DOI:** [10.1093/rfs/hhaf102](https://doi.org/10.1093/rfs/hhaf102)

**Fields & Theories / 领域与理论:**

- **Fields:** Asset Pricing, Financial Intermediation, Macro-Finance
- **领域:** 资产定价, 金融中介, 宏观金融
- **Theories:** General Equilibrium, Financial Constraints, Intermediary Asset Pricing, Taylor Rule
- **理论:** 一般均衡, 财务约束, 中介资产定价, 泰勒规则

## Abstract / 摘要:

I study the yield curve dynamics in a general equilibrium model with financial intermediaries facing financing constraints. When constraints bind, intermediaries reallocate their portfolios, causing deadweight losses in aggregate consumption, thus affecting savers' marginal utility. Because the yield curve is a forecast of marginal utility, intermediaries' constraints show up, via general equilibrium forces, in long-term yields. I show that the mechanism connecting intermediaries' constraints and long-term yields produces highly nonlinear interest rate dynamics and a positive real term premium in equilibrium. I extend the analysis to the nominal yield curve using a simple Taylor rule.

我在一个存在融资约束的金融中介的一般均衡模型中研究收益率曲线动态。当约束生效时，中介机构会重新配置其投资组合，导致总消费的死重损失，从而影响储蓄者的边际效用。由于收益率曲线是对边际效用的预测，中介机构的约束通过一般均衡力量体现在长期收益率中。我证明了连接中介机构约束与长期收益率的机制在均衡中产生了高度非线性的利率动态和正的实际期限溢价。我使用简单的泰勒规则将分析扩展到名义收益率曲线。

### Fields & Theories / 领域与理论:

- **Fields:** Corporate Finance, Law and Finance, Public Finance
- **领域:** 公司金融, 法律与金融, 公共财政
- **Theories:** Political Economy, Partisanship, Incentive Theory
- **理论:** 政治经济学, 党派偏见, 激励理论

## Abstract / 摘要:

We document that judges' political affiliations are strongly associated with the level of judicial penalties levied against companies. For example, Republican-appointed judges impose larger fines for hiring illegal immigrants, while Democrat-appointed judges impose larger fines for pollution- and environment-related violations. Time-series variation suggests that political partisanship, not fixed ideological differences, drives these findings. The differences become amplified when higher-court judicial vacancies exist and in the months before national elections. Our findings highlight the importance of political polarization for U.S. companies and illustrate how judicial composition can affect firms' incentive to avoid violating laws connected to partisan issues.

我们证明法官的政治派别与针对公司征收的司法罚款水平密切相关。例如，共和党任命的法官对雇用非法移民的行为处以更高额的罚款，而民主党任命的法官对与污染和环境相关的违规行为处以更高额的罚款。时间序列变化表明，驱动这些发现的是政治党派偏见，而非固定的意识形态差异。当存在高院法官职位空缺以及在全国大选前的几个月里，这些差异会进一步放大。我们的研究结果强调了政治极化对美国公司的重要性，并说明了司法构成如何影响公司避免违反与党派议题相关的法律的动机。

## 6. Payment for Order Flow and Option Internalization

---

订单流付费与期权内化

**Authors / 作者:** Thomas Ernst, Chester Spatt

**DOI:** [10.1093/rfs/hhaf108](https://doi.org/10.1093/rfs/hhaf108)

### Fields & Theories / 领域与理论:

- **Fields:** Market Microstructure, Derivatives, Financial Regulation
- **领域:** 市场微观结构, 衍生品, 金融监管
- **Theories:** Payment for Order Flow, Internalization, Barriers to Entry, Market Making
- **理论:** 订单流付费, 内化, 准入门槛, 做市

**Abstract / 摘要:**

Option wholesalers specialize in purchasing and executing against retail option order flow. Orders are internalized via auctions (which provide price improvement) and the limit order book. Designated market makers (DMMs) have a key advantage in internalizing limit order book trades: they obtain the first five contracts of any order they bring to an exchange where they are a DMM. We exploit variation in DMM assignments and allocation rules to highlight how these rules create a barrier to entry in option wholesaling that does not exist for equity wholesaling, protecting wholesaler profits and high option PFOF.

期权批发商专门从事购买零售期权订单流并针对其进行执行。订单通过拍卖（提供价格改善）和限价订单簿实现内化。指定做市商（DMMs）在内化限价订单簿交易方面具有关键优势：在他们担任 DMM 的交易所，他们可以获得其带来的任何订单的前五份合约。我们利用 DMM 分配和分配规则的变化，强调这些规则如何为期权批发业务创造了股票批发业务中不存在的准入门槛，从而保护了批发商的利润和高额的期权订单流付费（PFOF）。
